HOLSTEIN-FRIESIAN CATTLE.

Purebred Registered

HOLSTEIN CATTLE

The preliminary report of tests covering the period since 1909, and just published by the Iowa Agricultural Experiment Station, states that the average of records made by first generation heifers by a purebred Holstein sire, shows an increase of 71 per cent milk and 42 per cent fat, at an average age of 3½ years, over the record of their scrub dams at an average age of 6 years. These dependable reports show very plainly that the introduction of a purebred Holstein bull to a herd of common cows will materially increase production and profits. There's big money in the big "Black and White" Holsteins.

Send for FREE Illustrated Descriptive Booklet.

Pabst Stock Farm DEPT. 30 Oconomowoc, Wis.

23.13-lb Holstein Bull Ready for Service

THE sire of this young bull was King Segis Concordia Hengerveld 96214 and he is out of Pinehurst Grace 119959, a cow with a 7-day record of 23.13 pounds. The sire of King Segis Concordia Hengerveld was King Segis De Kol Korndyke 56110 (54 A. R. O. daughters, including Mabel Segis Korn with a 7-day record of 40.32 and a 30-day record of 165.22). His dam was Sadie Vale Concord 3d's Hengerveld 100308 with a 7-day record of 28.46. The sire of Pinehurst Grace was Sir Piebe Job Sarcastic (9 A. R. O. daughters) while the dam was Parthenia Piebe De Kol, A. R. O. 18.26. Going back to the third generation on the sire's side we find King Segis (87 A. R. O. daughters—9 from 30 to 35 pounds). King Segis De Kol Korndyke was out of Pontiac Clothilde De Kol 2d 69991, with a 7-day record of 37.21. The sire of Sadie Vale Concord 3d's Hengerveld was Hengerveld De Kol 23102 (116 A. R. O. daughters—10 above 30 pounds), while the dam of this cow was Sadie Vale Concordia 3d, with a 7-day record as a 2 year old of 16.81. The grandsire of Pinehurst Grace on the sire's side was Sir Piebe Heng De Kol (25 A. R. O. daughters) and the grandam, Job's Sarcastic. The grandsire of Pinehurst Grace on the dam's side was Gem Pietertje Paul De Kol (23 A. R. O. daughters) while the grandam was Echo Parthenia (1 A. R. O. daughter). Note the rich breeding of this young bull. He is priced right. Send for a more complete pedigree.

PINEHURST DAIRY SHEBOYGAN FALLS, WIS.

28-LB. HOLSTEIN BULL

BORN February, 1916, nearly ready for service. Dam, Eagle Rigtje Belle, A. R. O. record 4 years, 2 months, 28.02. Sire, Sir Elmer Johanna Wit, traces twice to Sir Johanna De Kol. His three nearest dams average 4.11% fat. Every dam in pedigree from 3.8% to 4%. His dam will be put on test in about 60 days and shows promise of increasing her record. Address

TRUTTSCHEL BROS. SHEBOYGAN FALLS, WIS.

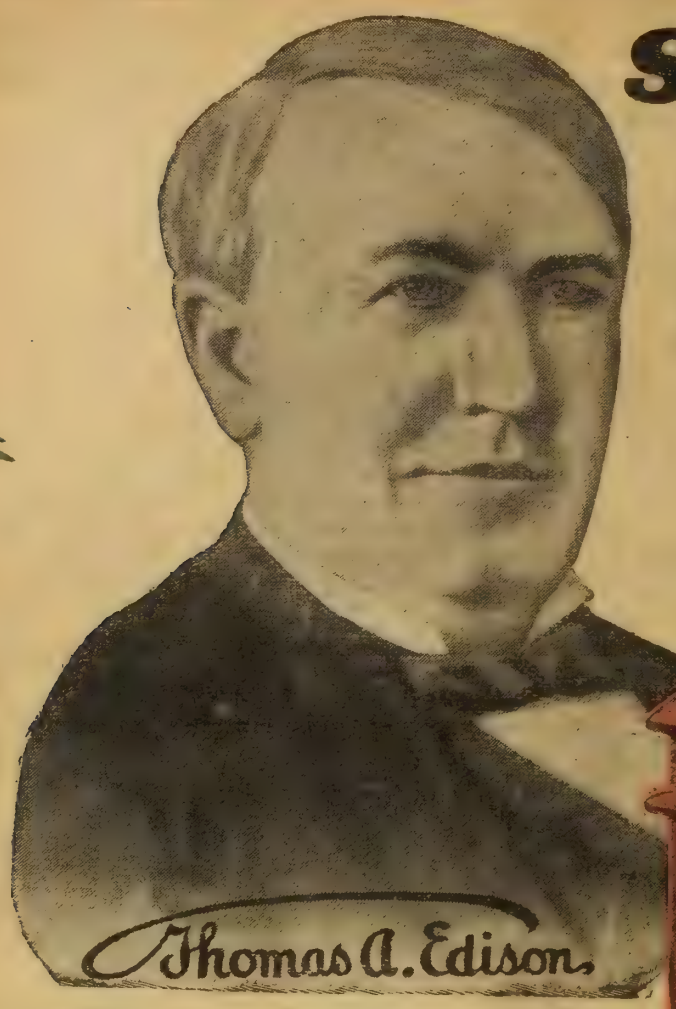
Success for Mr. Edison

Life-Like Music At Last!

For years, the world's greatest inventor worked night and day to make the music of the phonograph true to life. At last he has been crowned with success. Just as he was the first to invent the phonograph, so is he the only one who has made phonograph music life-like. And now we make this great, rock-bottom offer on the genuine New Edison, the phonograph invented by Thomas A. Edison. Now that you can get *the best* on this wonderful offer, you need no longer be satisfied with anything less than Mr. Edison's great instrument. Just read below how easily you may have the genuine New Edison in your home.



Only $1.00 and after trial!

Yes, we will send you the New Edison, the product of the world's greatest inventor's genius, the phonograph with the wonderful diamond stylus reproducer and your choice of the latest Diamond Amberol Records on *free trial without a penny down.* On this offer, you can now have the genuine Edison, the instrument which gives you real, life-like music, the finest and best of all phonographs at a small fraction of the price asked for imitations of Mr. Edison's great instrument. *Seize this opportunity.* Send the coupon now for free catalog.

Rock-Bottom Direct Offer—

If, after the free trial, you decide to keep Mr. Edison's superb new instrument, send us only $1. Pay the balance on easiest kind of monthly payments.

Think of it—a $1.00 payment, and a few dollars a month to get this wonderful new style outfit—Mr. Edison's great phonograph with the Diamond Stylus reproducer, all the musical results of the highest price outfits—the same Diamond Amberol Records—yes, the greatest value for $1.00 down balance on easiest monthly terms. Convince yourself—free trial first! No money down, no C. O. D., not one cent to pay unless you choose to keep the instrument. Send the coupon now full particulars.

A Happy Home

Happiness is life—and real happiness is found only in a real home. And by a *real home* I do not mean a house with a yard or farm around it. Oh, no! A real home is the place where the happy and united family gather together for mutual enjoyment and recreation. And the Edison makes this possible, for it stands supreme as the greatest home entertainer. It will mean more than entertainment and merriment, more than an hour of amusement, yes, it will mean genuine pleasure of the lasting sort—helpful entertainment and culture of the most beneficial kind. It will mean the family united—a new home.

Entertain Your Friends

Get the New Edison in your home on free trial. Entertain your family and friends with the latest up-to-date song hits of the big cities. Laugh until your sides ache at the funniest of funny minstrel shows. Hear the grand old church hymns. Hear the crashing brass bands, the waltzes, the two-steps, the solos, the duets and quartettes. You will sit awe-striken at the wonderful grand operas as sung by the world's greatest singers. You will be moved by the tender, sweet harmony of quartettes singing those old melodies that you have heard all your life. Take your choice of any kind of entertainment. All on free trial. Then, after the trial, send the outfit back at our expense if you choose. Or keep it on our great rock-bottom offer. **Send the coupon today.**

VOL. XLV. NO. 47. THURSDAY, NOVEMBER 23, 1916. WHOLE NO. 1817

THE NATIONAL BIRD

8 H.P Portable Saw Rig

Weighs only 1285 lbs. One horse will handle it. Saw frame of tilting type. Blades 28 inches. Fitted for pole saw work if desired. Tongue, neck yoke and double-trees furnished instead of shafts when preferred. Saw may be detached, leaving portable outfit; also engine removed for other uses. Engine alone weighs only 320 lbs.

Cushman

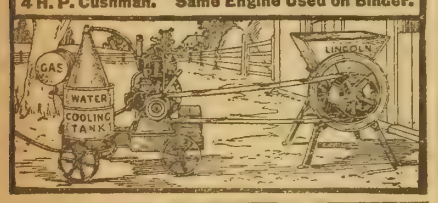
LIGHT WEIGHT ENGINES

Most useful engines for farm work. Run quietly and steadily because of **Throttle Governor** and perfect balance. No violent explosions or fast and slow speeds. Easy to move around from job to job. **4 H. P. weighs only 190 lbs.** Besides doing all general farm work, it may be attached to grain and corn binders, saving a team.

In sawing, sensitive Cushman Throttle Governor responds instantly when saw strikes log, making it stand up and deliver **steady, uniform speed.** One man who uses the Cushman Saw Rig says it pulls more like a steam engine than any gas engine he ever handled.

Cushman Engines are not cheap, but they are cheap in the long run. 4 to 20 H. P. Engine Book mailed free on request.

CUSHMAN MOTOR WORKS
855 North 21st Street Lincoln, Nebraska
4 H. P. Cushman. Same Engine Used on Binder.



Don't Miss the Big Money

THE virgin soil that the stumps keep out of cultivation is the best soil you have. You can pull out an acre or more of stumps in a day at a cost of from 3c to 5c per stump. No matter how big or tough the stump, it walks right out when the Hercules gets hold of it. With the stump come all the long tap roots that spread out in all directions. The land is left ready for cultivation.

HERCULES
Triple Power Stump Puller

Let us send you proof that thousands of farmers have made big money by the Hercules. Get our money saving proposition.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Power Required For Sawing.

Which requires the most power to pull, the circle type saw or the band saw, as used on portable sawmills?

Answer.—The band saw requires somewhat less power, but is more easily broken. Band saws are generally used for resawing, as they make a smoother cut with less waste.

Winding Magnet Coils.

In winding an electro-magnetic coil, must I wind it like thread is wound on a spool? That is, should I begin at one end of the core with the first layer and wrap until the other end is reached; then rap back over the first layer and wrap until the other end is reached; then wrap back over the first layer, etc., until the coil is complete?

Answer.—A magnet coil is usually wound the same as thread is wound on a spool. For horseshoe magnets one coil is wound right hand, the other left hand.

A Wiring Diagram.

Would you please tell me how to wire a four-point switch? I want to run a motor, a call bell, and an electric light from a storage battery. How should it be wired?

Answer.—Figure 1 shows how to wire this outfit; B is the battery, S

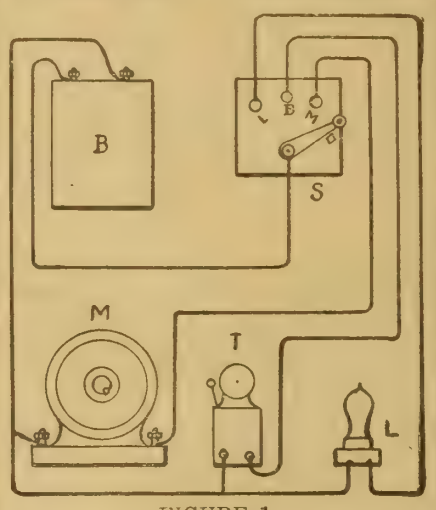

FIGURE 1.

the switch, M the motor, L the light, and T the bell. In wiring a group of this kind, only think of one circuit at a time. The current must flow from one terminal of the battery to the instrument, and then back to the battery. Take the motor, for instance. Place the switch on the point marked M. The current must flow from the battery to the switch handle, and from the handle to binding post M, and from there to the motor. Then it returns over the other wire to the battery.

Adjusting a Schebler Carburetor.

I have a 1917 Studebaker car equipped with a Schebler carburetor. It is using too much gasoline. A bluish smoke comes from the exhaust. How can I adjust the carburetor to give more or less air? Can I take the plug out in the bottom and drain it? What should I do with the torage battery this winter?

Answer.—The air valve is located in the arm extending out from the side of the body of the carburetor. We are not sure whether you have a Model L or a Model R. To adjust a Model L air valve, loosen the lock nut that clamps the knurled head adjusting screw over the air valve. For less air, screw the screw in; for more air, out. The screw should be adjusted so that the valve seats firmly, but lightly. In some cases a lighter spring under the air valve is desirable. The adjusting screw on Model R is located under the valve. After adjusting the air valve, do not fail to lock the screw. Model R has a large cap over the air valve. Turning this cap to the right makes the mixture richer; turning to the left makes the mixture lean.

The whole float chamber of the Model I is removed by unscrewing the nut at the bottom. Model R carburetors are regularly furnished with a drain cock at the bottom. If the cock has been removed and the hole plugged, remove the plug to drain the carburetor. The bluish smoke you mention probably is due to too much oil rather than to carburetor trouble. Too much oil causes poor ignition and on this account might be the cause of an excessive use of gasoline.

A storage battery kept fully charged will not freeze except in very cold weather. The battery should be recharged every month, even if it is not used. While charging or discharging, a storage battery generates heat enough to keep it from freezing.

Batteries for Telegraphy.

Please tell me how many 6x8 gravity batteries I would need to operate a telegraph line a mile and three-quarters long, with twenty-ohm instruments. Would I need a relay? How many amperes should a 6x8 gravity battery test? How many volts should it test? How much difference in amperes between a 6x8 and a 5x7 battery? How should the batteries be wired?

Answer.—Using No. 12 gauge iron wire for the line, you would require six gravity cells to operate your line without a relay. The cells should be connected in series, that is, copper to zinc. Each cell should test a little over one volt. The amperage is rather uncertain, as it is affected by the newness of the battery, the amalgamation, length of use, etc. When not in use the 6x8 might test as high as thirty amperes and the 5x7 about half as much. A heavy drain would soon reduce the output to a fraction of an ampere.

An Electric Engine.

I wish you would explain to me how to make an electric engine, using two magnets out of an electric horn run by batteries.

Answer.—Figure 2 shows how such an engine may be constructed. MM are the magnet coils, wound of very fine wire, one right, the other left. The magnet cores are fastened in an iron base, T, which is bolted to a wooden base. BB are the crank-shaft bearings, supported on the wooden base. The bearing with the screw in it must be metal; the other bearing may be wood. F is the flywheel; R the connecting rod, driving the crank shaft, S. R should be brass or wood, and have a soft iron armature, A, fastened to it as shown. I is the commutator, consisting of a metal disk with a strip of insulation half way around it; the insulation being shown back on the drawing. S is a spring brass brush, resting on the commutator. The heavy dark lines show the method of wiring. Rod R must work freely in a hole through T. The commutator must be set on the crank shaft, so that the current flows through the magnets

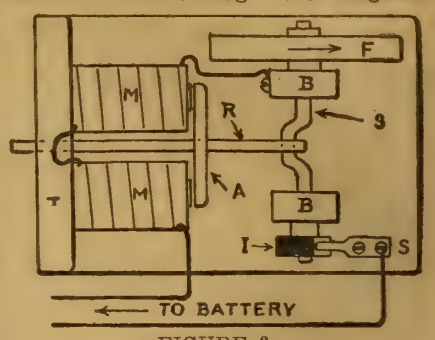

FIGURE 2.

when armature A is moving toward the magnets, the brush resting on the insulating strip of the commutator when the armature is moving away from the magnets.

GOOD MEN WANTED TO LEARN THE AUTO BUSINESS

Any ambitious, capable young man can make a success for himself, and if you will only prepare yourself, you will get work, because positions are open, waiting for competent men to do Auto and Electrical work. The American Auto College develops your talent for a splendid, big paying trade. Our course has been enlarged with lots of new work—principles of Knight Motors, 8 and 12-cylinder Engines of new models, Tractors, new Starting systems, Magnetos, Wiring, Coils, Welding, Brazing, Lathe work, Milling and Drill work, Tool making, Overhauling and Repairing, and all the newest, up-to-date Auto equipment. **$900 TO $3,000 SALARY OR BUSINESS PROFITS PER YEAR**

LIFETIME OPPORTUNITY—It's up to you to be either a common, hard-working laborer or else learn a good business. Thousands of men will go into the Auto business within the next year. Be one of them. We want you to. Get started right away. Learn here where the opportunities are greatest and best, by our system of actual work in our large shops. No books used; we furnish tools. You do the work yourself. Our men learn easily and quickly because practical work is the best. Big Electric Starter and Tractor course FREE with the regular Auto course. Write for our big FREE Catalog now.

THURSDAY, NOVEMBER 23, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

WE ARE THANKFUL.

THURSDAY of next week is Thanksgiving Day. Let us take a few minutes to recount some of the things for which we have cause to be thankful this year.

In the first place, we are thankful that we continue to be at peace with the world, that fields which were planted to corn and grain in the spring were permitted to bring their crops through to maturity and the harvest and were not terribly harrowed by shot and shell, moistened by the red blood of our sons—yours and mine.

In the second place, we are thankful that, having brought our crops through to maturity, we are privileged to receive good prices for them, so that the work of our hands and our heads is receiving a wage well worth our arduous labor under the burning sun of summer.

Next, we are thankful that prosperity is widespread throughout the land, not being confined alone to those of us who are the producing class in the nation's granary, but that it is being enjoyed likewise by those who find their life's work in factory and mill, in the large centers of population as well as in the wide reaches of the country.

We are thankful that the comforts and pleasures of life are keeping pace with our increased efforts and our larger earnings, so that never before was country life so richly and wholly satisfying, nor were men and women of the farms so proud of their calling, or so willing to remain there, turning unhearing ears and unseeing eyes to the allurements of the town and city.

We are thankful that our children of the country are coming to see, more and more each year, that the farm offers bigger and better opportunities to do the really-worth-while things of life than does the city, and that, even when they have gone from us to attend school and college, they return to us, eager to resume the work where they dropped it, in furrow and feed lot, to the end that that which we have begun in such high hope shall be finished by those whom we love and those who love us.

We are thankful that men of all ranks and callings are realizing today, as never before, that the interests and the welfare of the farmer must be considered above all others, and that those who sit in high places are shaping laws to give us long-withheld relief and to advance our prosperity, to the end that our beloved nation may take still higher rank among the great powers of the world.

We are thankful that the future begins to unfold before us bright and fair to look upon, unmarred by any cloud of fear; that the horizon of agricultural prosperity stretches as far as eye can reach, unbroken by any rift of doubt, on and on to the very edges of that promised land wherein He dwells, who, "watching over Israel, slumbers not, nor sleeps."

We are thankful that those whom the good Lord entrusted to our care are still with us, occupying their wonted places in the family circle; that there are no empty chairs pushed back against the wall; that, as the shades of night begin to gather and we approach our home, there comes to our ears the welcome sound of loved and loving voices, that shining faces are at the window to greet us, that life is full of pleasure and that we and those of our household are strong to enjoy them.

For all this, and much more, we of this family circle are thankful—oh, so very, very thankful this Thanksgiving Day.

HARNESS PRICES ON THE ADVANCE.

I WONDER how many of my readers know that if they were to buy the new set of harness now which they need, instead of waiting until next spring, they would save themselves from $15 to $25? Even in these days of eighty-cent corn, this is a sum well worth saving.

The hide and leather business is undergoing a great upheaval at the present time. Prices are advancing rapidly. I was advised by a prominent harness manufacturer today that he had just received a carload of leather, which cost him $22,000. He was obliged to pay seventy-two cents a pound, in carload lot, for the identical grade of harness leather which cost only thirty-eight cents two years ago. In short, two years of the European war have caused the price of leather to double. Nor is this all. Everything that goes into the making of a set of harness, from the buckles to the hames, is advancing in price. If you were to ask me why this is so, I would explain it on the ground of the frantic demand of the warring nations of Europe for our leather products—shoes and harness predominating. I have before me, as I write, a report showing that the exports of leather of all kinds from the United States during the year ending June 30, 1916, amounted to $80,073,887. For the same period ending June 30, 1914, (a month before the war began) the total was $36,668,869, or less than one-half that of the last year. Our exports of boots and shoes for the past year were practically three times what they were two years ago, while our combined exports of leather, boots, shoes, harness and other leather products for the last year were $90,000,000 more than two years ago. With such a record-breaking demand from Europe, and our shoes and harness going there in such unprecedented quantity, there is ground for the advance which is beginning to make itself felt to such an extent here at home.

You and I who paid $3 or $4 for a pair of shoes a year or two ago now find these same shoes selling for $5 and $6 and we are lucky, under the circumstances, to get them for that. As I write, a newspaper was laid on my desk, an item on the first page stating that the leading leather and shoe manufacturers and retailers of Boston predict that shoes will retail for $20 and even $30 a pair in the not far distant future. Harness is simply keeping pace with our other leather products. Harness sets for which we are now paying $65 will sell for $85 and $100 in the spring, when the demand and need are greatest.

I am advised by prominent manufacturers, however, that it is not too late to take time by the forelock in this particular instance. Harness have not yet advanced, although leather and everything which goes into its making is already advancing steadily. Next spring, when sales are being freely made, the increased prices will be asked, but today the old prices still prevail. This is because shops are full of harness and the advance in the price of the raw material has been so sudden that it has not yet reached the consumer nor affected the stock which was on hand when the advance took place. But the present conditions will not continue long and those among you who believe in preparedness, when it saves you money on as important an item as harness, would do well to take my advice and buy before the prices advance.

Nor must we make the mistake of blaming the harness manufacturers, for while it is true that shoes and harness are going up in price, it is also true that green hides are bringing thirty-three cents a pound in Chicago today, while forty cents is predicted, whereas twenty years ago they were bringing only five cents a pound; also that corn is bringing ten times as much today as it did in 1895. The harness manufacturer whom I interviewed on the subject was well within his facts when he said: "It takes fewer bushels of corn or wheat and less hogs and cattle to buy harness today than it used to, even at the increased prices obtaining today." Let us not delay, however, until even our high corn prices avail us nothing when it comes to paying the increase in the manufactured products which we need. Saving a dollar is just as important as earning one. If you need harness now, or will need it in the spring, buy it at once, before the price advances.

THE PARTNERSHIP OF HOME.

LAST week I promised to give my views this week on the complaint of the Illinois farmer's wife, who is allowed no voice in the family's business affairs, who has no spending money of her own and who, notwithstanding the fact that they have an automobile and sixteen horses, is obliged to walk to town, six miles, when she wishes to attend any social function. I have printed a number of letters on the subject, reserving the right to give my own opinion last.

I want to preface my remarks with the statement that I realize my responsibility full well. I must say that which will fit the particular case under discussion and at the same time do good in thousands of other farm homes, where, perhaps, the identical situation prevails. Moreover, I am so fortunate as to have a following of readers who place their confidence in me and look to me for sound logic. If I fail them in this, I will never be able to regain the proud position I once held. I have a following made up of readers like the one who wrote me, just last week:

We have taken your paper for thirty years and always liked it. I hope nothing will be said to lessen my opinion of it.

I sincerely hope that that which I shall say on this subject will not lose me the good opinion of this farm family which has taken my paper for so many years. I value the friendships of many years' standing more than anything else in all the wide world, aside from the love of the members of my immediate family.

Here are my honest, earnest views on the subject we have had under discussion for several weeks past:

The husband who does not take his wife into full partnership with him on all matters, without any exception whatever, is not only making an awful mistake, but is guilty of criminal carelessness. The wife who does not make every sacrifice to assist her husband to get a foothold in the struggle for life is not only undeserving of our sympathy, but should be most emphatically condemned. The husband, being the stronger of the two physically (not mentally, do not misunderstand me), should be the one to give in first when a clash is unavoidable.

I believe that every man—whether he be farmer, merchant, day laborer or millionaire—should discuss his business affairs with his wife, down to the very most minute detail. If he is a farmer he should tell her just how much his corn crop is worth or has brought, what the dispersion sale of his herd has realized him, what he proposes to buy in the way of more land or more animals or more labor-saving machinery in order to make his farming operations easier or more profitable, what system of rotation of crops he proposes to follow, and so on and on. He should tell her how much money they have in the bank, what notes are outstanding, what his ambitions are and in every way possible make her a partner of his thoughts as well as of his acts.

I believe that every woman—no matter whether she live in the country or in the city or town—should go to her husband with the cares and perplexities of her household work and ask his advice, should tell him what comforts and conveniences she wishes to buy, and ask him if the family finances are in such shape that the expenditure will be justified or is possible, should ask him to aid her in inculcating moral principles into the children's minds and in bringing them up to be God-fearing men and women. I believe that husband and wife should work together for the advancement of one another and of every member of the family, talking everything over together, no matter whether it be the sale of a pound of butter or the purchase of a tractor. In no other way, in my opinion, can married life be made an absolute success.

I believe that married life is, of necessity, a series of give and take, that there must be sacrifices on both sides. The husband may find it necessary to give up little personal extravagances until the family affairs justify them again. The wife may find it necessary to do without things which she had to work with in her father's home and which she believed then to be absolutely indispensable. But if the two love each other they will welcome the personal sacrifice and will struggle together without recrimination or regret until the time comes when smiling fortune, blessing their fields and making them to yield abundantly, enables them to have those things which they have long craved and long been denied, to be enjoyed all the more for the long waiting and hoping.

The husband who does not give his wife every convenience which they can afford is guilty of a neglect which is well-nigh criminal. The wife who does not do the best she can with that which they can afford, without complaining or nagging, is guilty of a selfish thoughtlessness which cannot be condemned too strongly. The partnership which does not consider the physical, mental and spiritual welfare of each partner absolutely equally is doomed to failure, sooner or later.

These are my honest convictions on the subject under discussion, and I offer them to you for whatever they may be worth. If, after weighing them, you find them wanting, will you let me know? But if, on the other hand, you find them good, will you hug them to your hearts and build your own lives upon them, to the end that the peace which passeth all understanding shall prevail upon the hearthstones of millions of happy farm homes in a land abundantly blessed with plenty and prosperity?

An Article of Importance to Wisconsin Dairymen.

IN EACH issue The Wisconsin Farmer publishes one or more feature stories illustrative of some phase of Wisconsin farm life. This week one of our editors writes an interesting article concerning the Spaanum farm, in Dane county, and discusses the problem of cooling milk and other farm products right on the farm. Mr. Spaanum has a hillside farm and he has worked out a plan whereby he gets the largest possible use of every foot of his ground devoted to dairy barn and surroundings. He explains the plan of his cooling system and what it means to have rooms always available in the hottest weather, with temperatures as low as 36 to 40 degrees. Our readers who went through the recent hot summer will certainly appreciate this article concerning Mr. Spaanum's farm, and we hope it will arouse such an interest that many will be anxious to have an ice house and proper storage facilities on their own farms.

Conclusions on Upper Wisconsin Investigation.

MR. J. C. McDOWELL, agriculturist for the United States Department of Agriculture, in co-operation with Mr. W. B. Walker, assistant, have just issued a bulletin, "Farming on the Cut-Over Lands," after a careful survey and study of 801 farms typical of this area in Wisconsin, Minnesota and Michigan. Mr. McDowell will be remembered as one of the principal speakers at the 1915 meeting of the Wisconsin Dairymen's Association, and after a year's work in Upper Wisconsin, he speaks with considerable authority on this subject.

In his summary, Mr. McDowell makes the following important conclusions of interest to stump-land farms:

Net profits increase as tillage area increases. How to enlarge the tillable area economically is the first and most important agricultural problem.

With average yield and average price, potatoes furnish a satisfactory cash crop in practically all parts of the district. Hay, clover seed, peas, beans, hairy vetch, seed corn, rye, wheat, barley, small fruits and garden vegetables are other valuable cash crops.

Silos are increasing rapidly wherever corn can be grown.

On dairy farms of all sizes the quality of cows as indicated by receipts per cow is a major factor in determining labor income.

A large amount of family labor is available, much of which is not used to advantage and the crop area per horse is too small. Irregular fields with stumps prevent the most efficient use of machinery.

Hog production may be combined with dairying where corn matures and on farms growing rye, barley, soy beans or Canadian field peas as corn substitutes. Sheep and beef cattle production are not common as major propositions, but are furnishing satisfactory incomes on a few farms. Dairying combined with cash crops is profitable financially when production per cow is high and crops above the average.

Mr. McDowell's conclusions, it appears, agree with the general belief that in dairying lies the greatest possibilities for Upper Wisconsin. Beef, swine and sheep are being raised, he says, profitably in many instances, but the area studied seems to be better adapted to dairying, as it grows the dairyman's crops. The increasing number of silos indicates the drift in this direction, but even dairying, he has found, is not profitable except where the production per cow is high and the crop averages high. The quality of the cows is of major importance, and he recommends the use of better bulls, more cow-testing associations to weed out the boarders, and co-operative enterprises to secure better stock. The problem is one of aiding the settler to get better live stock and co-operative ownership of sires is suggested as one remedy as well as the well-known Ashland plan, whereby business men stand sponsor for better stock imported. Dairy cows, with young animals and bulls, his report show, comprise 63 per cent of the animals in the cut-over area. Sheep and beef cattle comprise less than 7 per cent, hogs less than 6 per cent, poultry 3 per cent, and work horses and colts 20 per cent.

The relation existing between income and size of business, as measured by tillable area, is discussed very fully. The "little farm well tilled" may succeed, and frequently does, Mr. McDowell says, but the prospects are brighter for the larger farm if it has sufficient area under the plow. This tends to point out the necessity of clearing the land as rapidly as possible, and the survey brought out the fact that the farms with a larger percentage of tillable ground brought the largest labor income per year. How large the farm should be depends upon the farmer's resources. Another important point is that, while family labor is plentiful, much of it is wasted on non-producing projects.

Mr. McDowell handles the entire subject without gloves, and, though the bulletin may not please unscrupulous real estate promoters, it gives the settler-farmer a splendid idea of the work before him.

Activity in Beef Breeds in Wisconsin.

WHERE one type of farming or live stock breeding forms a very large part of the activities of the farmers of any one state as dairying does in Wisconsin, it is but natural for many to assume that it is a one crop or a one live stock type state. This has been true to some extent of dairy farming in Wisconsin, although both the beef and swine industry are making rapid progress, and many more farmers are raising sheep with success each year.

Wisconsin was considered, only a short time ago, a strictly dairy state by outsiders, and to a large extent by our own people. The fact that dairying is the big factor no doubt has prompted such conclusions, but it should also be borne in mind that some of the foremost breeders and feeders of beef cattle live within this state. This was emphasized recently, when the honor of holding the greatest Short-horn sale in America fell to a Wisconsin breeder—Mr. Frank Harding, of Anoka Farms.

An informal "inventory" of the beef cattle interests of Wisconsin, taken recently by the Wisconsin Live Stock Breeders' Association, brings to light the fact that there are more than 500 regularly enrolled members of national beef-cattle clubs in this state. The membership in the Red Polled Cattle Club of America heads the list with a total of 241 active breeders, and other clubs are represented as follows: American Polled Durham Association, 131; the American Hereford Breeders' Association, 47; American Galloway Breeders' Association, 25; Aberdeen Angus Association of America, 35. By official figures there are about 580 Short-horn breeders in Wisconsin who own purebred females, but only a small number of these are members of the American Short-horn Breeders' Association, which is a stock company and the membership in thus restricted.

Unusual activity in all the beef breeds has been noted during the past few months, and this has been especially true with the Angus industry. Within only a few months 185 bulls of this well-known beef type were transferred to Wisconsin breeders. Our readers who have kept track of the various sales this year appreciate the fact that breeders in other states are buying from Wisconsin breeders, and we do not doubt but that, were the statistics available, it would surprise every breeder if he knew how much live stock was shipped from Wisconsin each year through private and public sale to other states for breeding purposes. While no exact figures are available on the sales of beef cattle to the open market, the demand for well-fitted animals for this purpose is reflected in the growing activity among breeders, who largely supply the feeding stock.

Interest in Dairy Show For Wisconsin.

ALREADY steps have been taken looking toward the location of the National Dairy Show at Milwaukee in 1917. Mr. W. H. Reese, of the Milwaukee Manufacturers' Association, and Mr. Lefeber attended the show at Springfield, Mass., this year. An effort has been made to get the National Dairy Show for the state fair grounds, but we are advised that the officials of the show would not consider this proposition. The National Dairy Show people have more recently been offered the auditorium in Milwaukee and it is reported that they are considering this proposition. Another report is that the National Dairy Show has contracted to show at Springfield, Mass., for five years on the new grounds built this year. We are inclined to think this report is incorrect as one of the directors of the National Dairy Show advises us that nothing definite will be decided before about the first of the year.

In this connection The Wisconsin Farmer has received a letter from Dr. Royal Klofonda, of Brillion, Wis. He writes:

Wisconsin is entitled to the National Dairy Show for 1917. Its breeders have furnished the state fairs and dairy shows with large numbers of almost undefeatable dairy cattle. There is never an exhibition held but what Wisconsin carries away a large proportion of ribbons. In order to accomplish this feat, large sums of money are spent in preparation for the benefit of all. It is no more than right that Wisconsin should be the next home of the National Dairy Show. Because ancient history records a partial failure does not prove that there will be a repetition. With more thorough management and hearty co-operation from all industries, a National Dairy Show in Wisconsin can be made a certain success. We suggest state breeders' associations invite the co-operation of each county organization, boys, and girls' clubs and various other organizations, thus creating a local interest which is the proper course towards a gain in rural attendance. Past tendency has been to rely too much on the lesser half—our city cousins. Wouldn't it be nice to have the whole "rural family" at the National Dairy Show at Milwaukee in 1917?

One more suggestion: How does it appeal to you to combine the Wisconsin State Fair and the National Dairy Show in 1917 into one grand exposition.

The Wisconsin Farmer has been somewhat backward about pushing the National Dairy Show for Wisconsin for fear it might hurt the Wisconsin State Fair, but we understand the state fair officials are enthusiastic for the event. This is certainly showing the proper spirit.

Among the prominent western breeders and dairymen who are directors in the National Dairy Show association are W. J. Gillett, Rosendale, Wis.; Charles L. Hill, Rosendale, Wis.; W. B. Barney, Des Moines, Iowa; John Irwin, Minneapolis, Minn.; Col. George Watson French, of Iowana Farms, Davenport, Iowa. Most of the gentlemen are exhibitors at the national shows and would be glad to have the show come west each alternate year. New York and New England dairy interests may try to keep the show in the East, but it seems likely some western city will win it in 1917.

Demand For Better Buttermakers.

THERE probably was never the demand for good, efficient buttermakers as exists today. Competition between creameries is becoming keener each year; those which turn out the finest product are receiving the premiums paid for good butter and successful creameries which a few years ago were content with a $75-a-month buttermaker are now looking for the man with the capacity to earn $125 or $150, or more. The more the creamery owners, which in Wisconsin means the farmers as the larger number of our creameries are co-operative, realize that quality counts the greater the demand for efficient buttermakers. In one Wisconsin community in which two creameries churned over 1,000,000 pounds of butter a year, it was found last summer they were losing from 1 to 2 cents a pound because of poor quality and marketing. An individually owned creamery a few miles away was selling its product at 2 to 3 cents a pound higher, and this competition is bringing the creamery owners to realize that the best is none too good.

These facts were in line with those very pointedly brought out last week by Dean Farrington, of the Wisconsin Dairy School, before the national convention of buttermakers at Minneapolis. Every buttermaker, he says, should answer the question, "Would I hire myself in my own creamery?" as the time is passing when students in creamery operation can hope to get a job and hold it without having a thorough and practical education backed by ideas and ideals. Inability of the dairy school to fill half the applications received for buttermakers, he considers a sign of the big demand for trained men and also an indication that creamery operators are coming to see the folly of turning out nothing but the best butter; a product that will command the highest market.

In summing up the qualifications of buttermakers, Dean Farrington quoted from the following, prepared by the owner of a large creamery business:

First, a man who knows what it is to be clean; who has a working knowledge of sanitation in a plant, and who does not need to wade through milk and cream with his boots on to get his work done.

Second, a man who has some experience in this line of business in other places.

Third, a man who knows how to exact obedience from those working with him. He must be a leader.

Fourth, a man who does not slight the details, and who keeps his eyes open.

There is also the demand now, Mr. Farrington says, for the buttermakers with personal pride, for whom there is a great opportunity for real missionary services in the communities where they work. Buttermakers who will reach outside and work with their patrons to improve their herds, weed out the boarders, and deliver a cream that is sweet and clean.

Wisconsin Interested in Milk Conference.

A CALL has been issued for the first national meeting of milk producers, to be held in Chicago, Tuesday, December 5th. This call was issued by the milk producers of Chicago dairy district, an organization numbering over 12,000 milk farmers and including some in southeastern Wisconsin. The meeting will be held under the auspices of the National Conference on Marketing and Farm Credits, which holds its fourth annual meeting in Chicago December 4th-9th, at the Hotel Sherman. The call states that milk producers of America are finding themselves forced to quit the business in large numbers on account of the high production cost. This high production cost involves high prices of lands, high prices of feed, higher prices and scarcity of labor and modern equipment and sanitary requirements for the dairy of today. The milk producers say they must either reorganize their methods of producing and distributing milk, or go out of business and leave to the farmers of the more distant sections the task of supplying the centers.

The real purpose of the conference is to work out some fair and equitable method for co-operative sales of milk and for contract prices which cover a longer than the customary six months' period. If

the producer can know for many months ahead just what price he is going to receive for milk, he will be better able to gauge his expense.

Mr. Frank T. Holt, of Kenosha, Wisconsin, is acting president, and W. J. Kittle, 29 South LaSalle Street, Chicago, is secretary of the association which is making this call.

Wisconsin Dairymen's Convention.

THE forty-fifth annual meeting of the Wisconsin Dairymen's Association will be held at the court house in Waupaca, December 5th-6th-7th. In 1872 a call for such a meeting was issued in Wisconsin by W. D. Hoard, Stephen Favill, W. S. Greene, Chester Hazen, H. F. Dousman, A. D. Favill and H. C. Drake. The first meeting was held at Watertown. From the time this organization was perfected until today dairy products in this state have increased from $1,000,000 to $100,000,000 in value annually. As many dairymen as can possibly attend the sessions of this convention should do so. It is expected there will be an unusually large attendance from the Fox River Valley district, and from central and upper Wisconsin.

The program will include addresses by Math Michels, Peebles; Noel Negley, Madison; George Moss, Waupaca; Dean H. L. Russell, Madison; W. J. Dougan, Beloit; C. E. Lee, Madison; A. J. McGuire, St. Paul, Minnesota; W. H. Clark, Rice Lake; John Michels, Peebles; J. G. Poynton, Fort Atkinson; George McKerrow, Pewaukee; J. Q. Emery, Madison; F. G. Swoboda, Antigo; F. M. White, Madison; F. R. Constance, Waupaca; A. J. Glover, Fort Atkinson. This array of talent will provide a feast for our dairymen, and we repeat that the attendance should be large. Waupaca is situated on the Soo line and can be reached from the south via Fond du Lac, and from the north via Appleton and Neenah-Menasha. From the west there is direct connection to Waupaca from Stevens Point, Marshfield and Chippewa Falls.

Increased Value of Wisconsin Dairy Products.

WISCONSIN farmers and dairymen are profiting by the present high prices of dairy products. As we write this, butter sales on the Elgin call board run from 36½ to 38 cents and the statement is made that prices will continue to advance and the end is not yet. There is apparently a constantly diminishing supply and a constantly increasing demand for export. Furthermore the cheese industry is making unusual demands for milk.

The price of butter on the Elgin call board November 10, 1913, was 31 cents. In 1914 on the corresponding day it was 33 cents. In 1915, on November 13th, it was 30 cents. This year on November 12th it was 36½ cents and some of the best fifty-tub lots brought 37 and 38 cents. This is an increase of more than 20 per cent over the corresponding dates for last year.

We quote a few items from cheese reports the middle of November:

Sheboygan—Seven hundred and eighty-two longhorns offered on call board and all sold at 26 cents. On the corresponding date a year ago there were 741 cases of longhorns offered on the Sheboygan call board and they sold at 15½ cents.

Plymouth—Six factories offered 419 boxes of cheese on the call board and they were sold as follows: Twenty-two twins at 26 cents; seventy-five daisies at 26¼ cents; thirty daisies at 26 cents; 118 cases longhorns at 26 cents, and 176 boxes square prints at 26⅜ cents. There were no Americas offered. Sales a year ago on the corresponding date on the Plymouth board were: Twenty-five twins at 14¾ cents; twenty-five cases Young Americas at 15½ cents; 310 daisies at 15½ cents; 496 cases longhorns at 15½ cents, and 420 boxes of square prints at 16 cents. The editor of one of our dairy papers commenting on the 1916 quotations on the Plymouth board November 13th, says: "Last week we thought someone was crazy, but with the still higher prices staring us in the face, we don't know what to think. They are sure some high fliers."

Appleton—Twelve factories, offered 327 boxes of cheese November 14th and these were sold as follows: Seventy-three cheddars and 254 boxes twins all 26 cents.

Muscoda—One hundred and ten boxes of twins offered, but all were withdrawn refusing a bid of 23 cents.

Spring Green—Nine hundred and nineteen daisies sold at 25¼ cents. Not only is the market on all dairy products high, but the demand is strong.

As usual the factories which have earned the reputation for turning out a good product are getting the top prices. It will be noted by the above figures that factories are getting an advance of about 20 per cent on butter over 1915 prices and an advance on cheese of about 66 2-3 per cent, but it is apparent that this is one year when we should make every lick count in the dairy business.

High Values Should Encourage Sheep Production.

THERE were upwards of 3,000,000 more sheep in the United States in 1909 than there were in 1915 and during that time the average value of sheep increased from $4.12 to $5.17 per head. Wool values started upward, even before the European war, and they have been climbing ever since. In 1910 the United States imported 263,000,000 pounds of raw wool, while last year the amount ran up to 308,000,000 pounds. If we look for an explanation as to why the number of sheep has decreased in this country we will find the cause in the gradual encroachment of agriculture on the grazing lands of the West, thereby causing an increase in the cost of sheep raising and incidentally, it may be added, creating the opportunity for the states of the central West.

We find that the eastern experiment stations are making a heroic effort to induce farmers of those states to increase the number of sheep on their farms. They are unquestionably soil builders, a ton of sheep manure having the value of $4.45, while manure from cattle is worth but $2 per ton, considering nitrogen worth 16 cents a pound, phosphoric acid 8 cents and potash 5 cents.

A few of the essentials in the problem of sheep raising are referred to in a bulletin from the Pennsylvania station. These include: The willingness of the farmer to pay the proper attention to his flock at the critical times of the year; the production of lambs of early maturity that should preferably be marketed before the first of July; the control of parasites in the flock by the sale of early lambs, rotation of pastures and flock management; the protection of sheep from dogs, by community interest in sheep, by enforcing dog laws and keeping sheep in protected quarters at night; the utilization of pasture to the greatest degree; the feeding of corn silage with clover or alfalfa hay, supplemented with grain, to the breeding ewes at definite periods; the selection of breeding sheep that possess merit in wool, as well as in mutton character; consitutional vigor and health as a result of breeding and care in a foundation flock; cheap equipment which offers protection, plenty of ventilation and a dry bed; the marketing of products of wool and mutton with an understanding of market values and demand.

It is pointed out in this bulletin that from fifteen to twenty-five ewes are a sufficient number for anyone without experience to undertake as the nucleus of a farm flock. It is resumed that a beginning is made with grades, but in any event the use of a pure-bred ram is strongly advised. Experiments at the Wisconsin and other stations have shown that pure-bred mutton rams sire lambs that make greater gains, reach a higher condition of flesh at less cost in amount of feed consumed, and command a higher market price than lambs sired by a scrub ram. The suggestion is made in this bulletin that one or two pure-bred ewes should be added to the females of a grade flock. The lambs from the latter may be kept and gradually the owner can eliminate his grades as the number of pure breds increase, so that in a few years, after experience is obtained in handling the sheep, something worth while will then be on hand to work with. While sheep require relatively little labor in their care, at the same time special attention is needed during the breeding and lambing season, and that is why experience in the handling of a small flock is needed before it is taken up on anything like an extensive scale. It is scarcely necessary to refer to the ability of sheep as weed destroyers, because it is a well-known fact that they will consume upwards of 90 per cent of all that troublesome weeds found on the farm. To be sure they need something besides weeds, but this is an advantage that must not be lost sight of when sheep are being considered only from the standpoint of mutton and wool production.

Many Diseases of Hogs Traceable to Lice.

IN TIMES past there has been a tendency on the part of some experiment tations to belittle the injurious effects of internal and external swine parasites. In some cases these institutions seem to have been filled with a fear that somebody was likely to reap a big profit as the result of marketing products that would destroy these parasites. Within the last twenty-four months we heard a station worker state that there was practically no connection between the presence of parasites and cholera, the inference being that hogs depleted in their vigor by internal and external pests were no more liable to contract a contagious disease than were healthy hogs. Now, as a matter of fact, every successful swine breeder knows better than this, and while no sensible man makes the claim that you can bring a herd of hogs to such a high condition of health that they will not contract disease, still there is a degree of immunity in bounding vigor, and for that reason every possible means should be utilized to reduce the injurious results that come either from external or internal agencies.

The South Dakota station has recently called attention to the fact that the first pigs to succumb to pneumonia are those that have been badly infested with lice. It is not contended that pneumonia is contracted directly because of the presence of the lice, but, rather, that the animal is weakened and made susceptible to the attack and means used to destroy lice greatly lessen the danger of bringing into the herd a contagious disease.

This station recommends dipping, but, of course, as the season is getting late, dipping is not practicable and other means must be resorted to, which leads directly to the recommendation of the hog oiler. "There are many machines on the market called hog oilers," says Dr. J. T. Dinwoodie, "which overcome the difficulty, inconvenience and danger of dipping animals in winter. The hog oilers take advantage of the fact that all lousy hogs scratch." It is recommended that those who do not have the improved type of oiler will get good results by soaking rope or other material in crude oil and afterward wrapping it around a post at a height of about two feet, so that the hogs have access to it. From time to time it should be saturated with more oil. Sometimes the oil is applied with a paint brush while the pigs are at the feeding trough. It should be put on along the back and down between the ears, and no harm will come if it is used so freely that it runs down the sides. In this way hogs become so besmeared that their sleeping quarters are soon brought into condition, so that lice cannot exist there. One must understand that lice do not breathe like the higher animals, but depend for their existence upon the admission of air through the pores of the skin. Just as soon as the little pests come into contact with oil, these pores are stopped up, which brings about their complete destruction.

Deceitfulness Practiced in Baling Hay.

STANDARDIZATION may be said to be the motto of the age in which we are now living. This fact was forcibly brought to the attention of those in attendance at the last farm credits and farm marketing conference held in Chicago. One of the speakers called attention to the fact that the buyer of produce for several large hotels in New York City was criticized for purchasing so many western apples while passing by the eastern product. His reply was, "I never buy anything that I have to look at before making the purchase." In other words, this man transacted business only with those who could furnish him a standard product, that is, a product that was absolutely up to the specifications in every sense.

More and more this principle is dominating the business world and it will surprise some of our readers to be told that serious abuses are practiced sometimes in the baling of hay. It is known as "veneering or facing the bales" and it is accomplished by feeding to the baling machine an occasional forkful of hay that is higher grade than the bulk of the lot being baled, and manipulating the forkful in such a way that the high-grade hay covers the outside of the bale, giving to it the appearance of being a product of one quality, whereas it is in reality of infinitely lower grade than it appears.

This practice has become so common that the National Hay Association has requested the department of agriculture to co-operate with it in trying to eliminate this form of unfairness. One result of this abuse is that buyers of the central markets are making a much closer examination of baled hay than they ever did before and it may be safely assumed that when they find an inferior product that has been simply "dressed up" to sell the shipper is going to be considerably disappointed with his returns.

It would be impossible to use language too strong in condemning this practice, not only because it is morally and legally wrong but because in the end it will operate against the best interests of hay producers.

Damage From Rabbits and Mice.

MANY a man has become discouraged in his attempts to establish an orchard by the depredations of rabbits and mice, and because of this the following communication from the well known Wisconsin horticulturist, George J. Kellogg will be of interest to many of our readers:

Give the boy 25 cents for every rabbit he will kill on your grounds, little or big, the year round. This will pay the boy and every rabbit saved in this way may be worth a dollar to you if you have twenty five nice apple trees that have been planted only a year or two. Every tree of the right kind, well started, is worth a dollar and each year's growth is worth a dollar more and you can't afford to run any rabbit risk.

The boy, the gun, the trap and a good dog are the best protection. Three cornstalks tied about the tree in November will keep the rabbits off the limbs. If a deep snow comes hire another boy, watch the drifts and stamp down the snow. I have used good newspapers tied about the trees, which will last one winter. Woven lath and wire veneer which costs only a few cents is good. Brown building paper is also good, but don't use black, as it will kill the tree where it touches it. One rabbit will do $25 worth of damage in one night.

Many growers of orchards know all these things but they need to be reminded of them "lest they forget."

Now about the mice. They are everywhere. I have had them come across the highway to get at my rose garden. The roses were mulched, but were not covered with soft dirt, so they got under them and bushes worth dollars were worthless in the spring. If I had covered them with inverted sod and soft dirt, or if I had taken old oyster cans and given the mice a little cornmeal and Paris green I would have saved my roses.

For the apple trees and shrubs and roses clear away the leaves and grass, mound up with fresh dirt about six inches and when the mice come to that fresh dirt they will go around. If there is any grass or a cornstalk on that mound the mice will climb. They will climb ever so far up a tree or shrub to get fresh bark if the snow drifts. I have known mice to get clear to the tops of apple trees. In case of deep snows tramp down around your trees and save the destruction of the mice. If damage by mice is seen as soon as the snow goes off by banking up with soft dirt it will often save the tree. By grafting, by inarching, connecting the top and the root with a scion or four scions you can sometimes save a valuable tree.

As Mr. Kellogg has been interested in horticultural problems for a period of eighty years, the beginner can well afford to benefit by his counsel. There is no question but what, under certain circumstances, one rabbit is able to do $25 worth of damage in a single night, and in advising fruit growers to encourage the boys in rabbit destruction. He is taking a most effective way of exterminating these pests. It is a wise thing to have a little cash circulating among the farm boys, and if they can succeed in exterminating tree pests, the money they earn in this way will prove to be an exceedingly good investment from the standpoint of the orchard owner.

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

Good Care and Regular Feeding.

To the Editor:—I was one of the entrants in the baby beef contest at Madison under the auspices of the Wisconsin Live Stock Breeders' Association.

My calf is a pure-bred Red Polled heifer, which has been fed and cared for by myself and was shown at the Richland County Fair, winning first prize. She weighed 470 pounds April 28th and on October 30th weighed seventy-five pounds. She was calved September 17, 1915. I have fed her whole milk from a pail twice a day and ground feed three times a day since April 28th. My experience has taught me the necessity of good care and regular feeding to produce good calves.

Rest Rooms For Farmers.

To the Editor:—You will be interested to know something about our ladies' rest rooms. These rooms are made great use of, particularly by the women from the country. We have found that they make these rooms headquarters as soon as they come to town. Here they leave their outside coats and rubbers and quite frequently packages until they are ready to go home. We do not find they make much use of the rest room as a visiting place, for the reason that they prefer to come out into the main store and see what is going on. Our store is equipped with rest rooms for both men and women and both rooms are supplied with toilet facilities. We find quite frequently both men and women make use of the separate rest rooms for changing clothing. The men especially find it convenient for putting on clean collars or a new tie.

These conveniences have been a great help to us in our business. They make our store headquarters for a very large number of farmers and members of their families. You will see the women folks especially make for the rest room as soon as they come to town. A great many of our women customers from the country, especially in the wintertime, do their trading without their heavy coats or wraps or rubbers on. This is much more comfortable for them and makes the store more like home to them. Furthermore, the wraps do them a great deal more good when they go out again into the cold.

Every general or department store should be supplied with rest rooms. In a small town like ours these rest rooms are used almost exclusively by the farmers. The fact that they have all of their wraps and togs and packages in our rest rooms seems to anchor them to our store and the convenience which we provide is well worth all it costs.

Tractor May Save Team.

To the Editor:—We have had some experience with a tractor this year, although this has been limited to filling three silos and two hours grinding grain, and plowing twenty-five acres on rolling prairie. I rather expect my tractor purchase will permit me to sell one team, but have not had enough experience yet to be absolutely sure.

T. A. Dowling.

Iowa Co., Wisconsin.

Mishicot Association.

To the Editor:—On account of poor late pastures our cows are not showing up the way they should, although those farmers which did summer feeding in addition to pasturage, are getting pretty good records and will also have a longer milking period. The record for thirty days ending October 31st, showing cows which produced forty-five pounds of fat or over is as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Oscar Samz					
Dolly, G. G.	5	9-22	1317	4.1	53.99
Molly G. G.	6	9-1	1146	4.1	46.99
George Barthels					
Splendet, N.	6	9-16	1155	4.6	53.13

Buttermakers' Program.

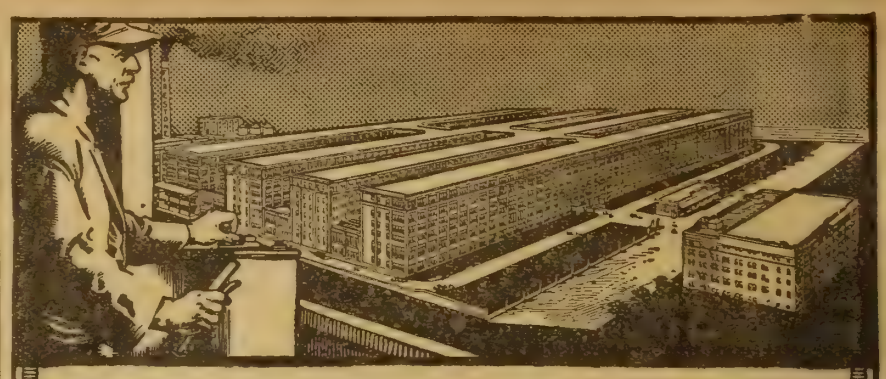
The annual session of the Wisconsin Buttermakers' Association will be held this year at Sparta, December 5th, 6th and 7th. The program announced includes the following:

Tuesday, December 5th—Addresses by Pres. E. J. Morton, of Chetek; Mayor F. P. Stiles, of Sparta; Lauritz Olson, of De Pere, and Prof. R. A. Moore, of Madison. Meetings in the armory.

Wednesday, December 6th—Inspection of butter exhibit. Addresses by L. Dickey, Glenwood City, on uses of gasoline engine in creamery; E. M. Jackson. La Crosse, on "How We Are Bettering Our Creamery Conditions." Reports of officers.

Wednesday, December 6th—H. B. Hoiberg, of Coon Valley, on "Hot Water Heaters in Creamery;" E. H. Farrington, Madison, on "Value of Skim Milk to Creamery Patrons;" Prof. M. Mortensen, Ames, Iowa, on "Business Correspondence;" R. M. Washburn, of St. Paul, Minn., on "The Buttermaker's Business."

Thursday, December 7th—Prof. F. G. Kraege, Fort Atkinson, on "Importance of Proper Methods of Ventilating a Creamery;" Prof. G. H. Benkendorf, on "The Buttermaker's Duty in the Proper Marketing of His Factory's Butter;" Hon. J. G. Weigle, Wisconsin Dairy and Food Commissioner, on "What the New License Law Has Accomplished;" Prof. E. G. Hastings, of Madison, on "The Cause and Prevention of Mold." Discussion of pasteurization, by H. E. Griffin, of Mt. Horeb, on the affirmative side and V. S. Keppel, of Holmen, on the negative side.



A 12,000 Horse Power Man

YOU ask, "What has this to do with me as a buyer of tires?" Just this: by such savings at the Firestone factory we cut down tire cost for you. One man feeds hundreds of tons of coal a day that develop 12,000 horsepower.

Firestone Tires

This is one of the many ways Firestone takes the cost out of overhead and puts the quality in the Tire. You profit through more quality—more mileage for less money.

It is equipment and efficiency of this kind throughout the Firestone factory and branches that give you exclusive quality, at ordinary price, in Firestone Tires.

Free Offer

A Firestone Cementless Tube Patch free, if you will send us your dealer's name, and the make of your tires.

Ask also for copy of our book, "Mileage Talks," No. 17.

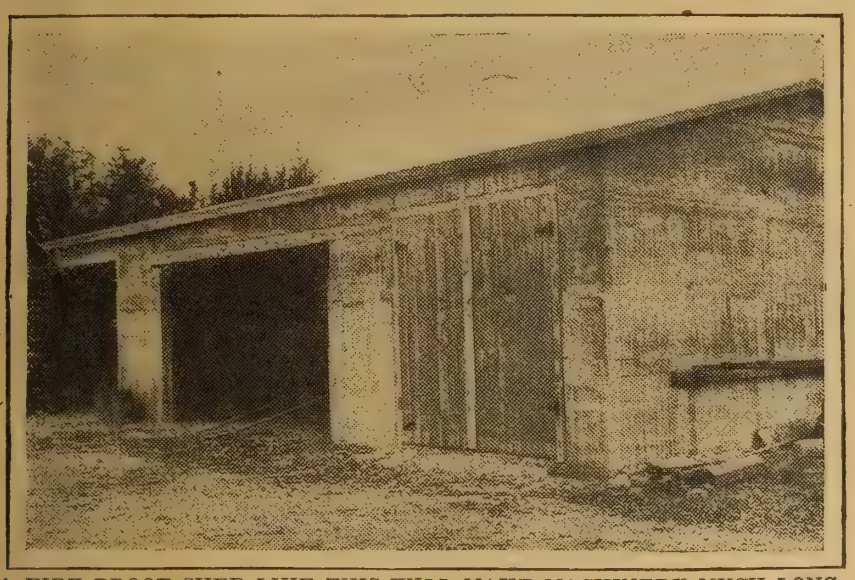
Take Care of Farm Machinery.

Plans Should Be Made at Once to Get All Machinery Under Cover—A Shed For Implements Is the Best Plan.

ONE of our best agricultural engineers has figured that 75 per cent of depreciation on agricultural implements may be saved by properly caring for such implements in the wintertime. In one of the accompanying views farm machinery is seen left out in the barnyard. There is a good deal of carelessness connected with this scene. While the farmer is otherwise well equipped, while the cattle are well housed and the grain stored in modern barns, the valuable implements are allowed to remain out in the rain and snow and sleet.

MACHINERY SHOWN IN THIS PICTURE IS TOO VALUABLE TO BE NEGLECTED.

Implements should be put away as soon as their usefulness for the season is ended. By this time of the year all repairing of implements should be finished. The implement shed shown with this article is of fireproof construction and a very serviceable shed. Those who do not care to put so much money in a shed can easily make a very good one from lumber. Be sure to put on a good roof. A hollow tile shed is splendid protection from the blasts of winter, but, like the concrete, is more expensive than wooden structures. However, these permanent materials are well worth their cost.



A FIRE-PROOF SHED LIKE THIS WILL MAKE MACHINERY MUCH LONGER LIVED.

It is better even at this late day in the fall to build a good shed than to wait until another season cuts the value of implements by depreciation. Rain and snow result in rust of working parts on a machine and rotting of the wood. It is advisable to apply a coat of paint before the implements are stored for the winter. At any rate, the machines should be well oiled and greased.

An end of the machinery shed may be partitioned off for a shop and this convenience will be appreciated many times during the year. In this shop each of the farm tools should have its place and they should be returned to this place after use?

An implement shed should be ten to eighteen feet in width and long. It is best to have a door along the exposed side. If there is no door the exposed side should not face the north or west, as most of the worst storms of winter come from that direction. In many sections the rains come from the east and it is not advisable to face an open shed to the east. The south in most instances will be best. Any open shed will have some rain and snow whisked into it by the changeable winds of winter and spring.

Sleet on painted implements will almost invariably damage the paint and in some cases cause it to peel off entirely.

Machinery is now much higher in price than in former years and it pays to take good care of it. Those who have not provided a special shed may find a covering somewhere and this should be arranged for at once.

Year-after-year Comfort with Ideal Heating

It's a mistake to think that you too cannot have IDEAL Heating. Just read these reasons, then send for our free book "IDEAL Heating" and you will see how easy it will be for you to have these comforts and conveniences.

"Come right in, folks, where it's warm all over—radiators make a heap of difference"

Reason 1. IDEAL heating can be put in a house, new or old, without tearing out partitions, walls, or floors, or disturbing present heating arrangements. No dirt, fuss, or confusion.

Reason 2. Not necessary to have water pressure because IDEAL boilers use the same water for years. The outfit may the first time be filled with a bucket.

Reason 3. Not necessary to have a cellar because IDEAL boiler may be placed in side room or "lean-to." Thousands of boilers are so placed.

Reason 4. The savings in fuel (IDEAL boilers burn any local fuel) soon pay the original cost of the outfit and the absence of labor and attention, and repairs of IDEAL heating, repay many times the cost.

Reason 5. The cost, as illustrated below, is not large. Consider that you buy an IDEAL outfit for a lifetime of service with no further upkeep expense, and when you are through with it, it's just as good as when first bought. It's the only equipment you can buy which is never worth less than you pay for it. In the meantime, it gives you unequaled heating service with less fuel bill per season and it increases the value of your property more than any one thing will do.

AMERICAN RADIATORS & IDEAL BOILERS

Reason 6. Because your wife wants it and ought to have it. The outfit changes a house into a home.

Write today for Free Book

A No. 4-19-W IDEAL Boiler and 270 ft. of 38-in. AMERICAN Radiators, costing the owner $200, were used to heat this farm house. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions.

Our book, "IDEAL Heating" is the best one published, giving illustrations and description of Radiator Heating — you can't make the best choice until you read it.

It will decide the engine question for you. It will tell you the INSIDE SECRETS OF THE ENGINE BUSINESS. It will show you how and why I built Galloway Masterpiece Engines IN MY OWN FACTORIES of the best material right from the BLUE PRINTS of the MOST SKILLED ENGINE DESIGNERS by the highest class machinists and workmen and sell them direct to you for less money than dealers and jobbers can buy engines of equal horse power, quality, workmanship and finish. This book on engines tells you why I can afford to back every Galloway Masterpiece engine from 1 3-4 b. p. to 16 b. p., stationary or portable, with a

$25,000 GUARANTEE BANK BOND

In addition to the reputation the Galloway factories and institutions have been years in building. This book will tell why to insist on a HEAVY WEIGHT, LARGE BORE, LONG STROKE and LOW SPEED ENGINE instead of the short stroke, small bore, high speed, light weight engines made, built and sold at lower prices. Galloway engines are BUILT TO STAND UP under the hardest tests--to give a lifetime of service at hard, tough jobs--YEAR IN AND YEAR OUT satisfaction at heavy work. This book fully describes and illustrates every style and size for farm and shop, tells how to line up a power house; filled from cover to cover with instructive ENGINE FACTS.

FREE POWER TEST TO SATISFY YOURSELF

Arranged if you desire. Our engines must prove to you in your own hands, you to be the sole judge, whether or not they actually do everything we claim for them. Ask for this book today. A postal will get it. Ask now before the edition is exhausted. In addition I will send you my 96-page fall book chock full of standard quality merchandise--necessities for every farm and city home. Address me personally,

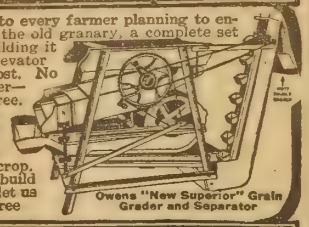
REMODEL YOUR GRANARY INTO MODERN ELEVATOR PLANS FREE

Absolutely free to every farmer planning to enlarge or rebuild the old granary, a complete set of plans for building it into a modern elevator at a minimum cost. No charges whatever—this service is free. A modern storage warehouse will save you time and money in handling the crop. If you expect to build a new elevator, let us send you plans free



Owens "New Superior" Grain Grader and Separator

Get Rid of Wild Oats

The Owens is the Fanning Mill that will positively rid your grain of every wild oat, no matter how badly mixed; also cockle, wild pea, buckwheat and mustard. The Owens will chaff and clean wheat, corn, oats, rye, barley, beans, timothy, clover, millet, flax, alfalfa and all other kinds of grain and seed. Get an Owens and save the dockage.

$3.00 An Acre
That's What Poor Seed Costs You

Three dollars an acre is a low estimate of the loss caused farmers due to sowing hit-and-miss seed—the kind of seed where every other grain only is fit to grow and produce a crop. Cut out the thin, little, spindling, undeveloped seeds—feed them to the hogs—and plant only the big fat fellows that can take care of themselves and raise big families.

Ask for our free booklets. We are specialists, and the name Owens has been the standard in grain cleaning for two generations. Isn't it worth while to investigate, if we can increase your grain crops next year 50%?

UPPER WISCONSIN.

Wisconsin No. 25 Corn.

Mr. E. J. Delwiche, in charge of the Ashland station, writes concerning the new early dent variety of corn, known as Wisconsin No. 25 and said to be ten days earlier in maturing that Wisconsin No. 8. He states that at the Spooner station Wisconsin No. 25 is yielding more than seventy-five bushels of shelled corn an acre and this corn was fit for seed on September 10th and ripe ears could have been selected as early as September 1st. This variety also did well at Conrath on heavy silt loam soil. A number of farmers in Upper Wisconsin who gave this new variety a test this year report favorably. There were several hundred acres of No. 25 planted in 1916 and a considerable amount of good seed will probably be available. Mr. Delwiche recommends Wisconsin No. 25 for either crib or silo. It grows from seven to nine feet high, is leafy and not coarse in stalk. The ears are medium size and a deep golden color. The kernels are deep, well dented and much harder than most dent varieties, although not flinty. Twelve to sixteen rows to the ear is the rule. The proportion of corn to cob averages 85 per cent.

Green Manuring in Northern Counties.

On Upper Wisconsin and Minnesota farms there is a scarcity of manure because of the small herds with which many of the settlers are obliged to start. The Northeast Minnesota Experiment Station at Duluth has been experimenting with rutabagas for green manure. A crop is raised among the trees and after this is harvested the ground is disked and a crop of rye sown. This is turned under the following June and the ground then put into some root crop. M. J. Thompson, superintendent of the northeast station, says that this plan of green manuring will bring excellent results if done with care to prevent the possible souring of the soil.

Work of the Grange in Upper Wisconsin.

To the Editor:—Agricultural events which originate with the farmers and then are carried to the towns and cities always seem to bring forth a bigger attendance of farmers than events which start in the town and then are carried to the farmers.

This was the case with the recent Grange Fair which was held in Grover township in Marinette county. Three local granges of the southern part of the county combined in the event and arranged a fair in which exhibits could be entered from any part of the county, but it was understood that the exhibits would mainly be from the south half of the county. Inasmuch as the farmers themselves had originated this event, they took a great amount of interest in it and made it a very successful affair in every way. They invited the commercial bodies of the city of Marinette to be present, and at noon about 100 business men of the city drove to the fair in automobiles and partook of a lunch which was served by the wives of the members of the grange. Besides the exhibits of general agricultural products, there was a special school exhibit of products raised by the children of seven or eight schools in the neighborhood where the fair was held. There was also an exhibit of pure-bred and grade dairy cattle, which brought forth a very favorable showing. Public-spirited citizens of Wausaukee put their automobiles at the disposal of new settlers of that locality and drove them to the scene of the fair, in order that they might become better acquainted with the good dairy herds of the southern part of the county. It was figured that the attendance at this fair, which lasted only one day, was over 2,000, and it will be realized that this showing was large, because the fair was held in the country instead of in a town. Two tractors gave demonstrations of plowing, and this was followed with great interest.

Besides other benefits of the fair, a better spirit of co-operation between the towns and country people was engendered. The week after the fair a committee of the grange visited Marinette and met with the business men at a noonday luncheon. The average members stated that they were so well pleased with the co-operation they had had from the business men of the city that they wanted to express their appreciation, and to assure the city business men that they would be glad to work with them in all endeavors to develop both the city and the country. The upshot of this meeting was a plan for a farmer's market in the city of Marinette. The granges appointed a committee to work on the matter in conjunction with a committee from the city, and it is likely that the market plan will go through in a short time.

Spurred on by the success of the first grange fair, it has been decided to make it an annual event, and already plans for a bigger and better fair for next year are being made. Almond King, of Omro, state master of the grange, was present and was one of the speakers at the fair this year.

Howard I. Wood.
Marinette Co., Wisconsin.

Minnesota Potato Show.

Minnesota potato growers will hold their annual meeting at St. Paul at the University Farm, January 3d. Minnesota potato growers admit that Wisconsin's potato show last year was one of the best ever held in the country. They maintain that Minnesota is just as good a potato state as Wisconsin and they are planning a little friendly rivalry in the way of a big show of their own this year. Whether they can come up to Wisconsin remains to be seen.

The Tractor You'll Buy When You See It Work

In our 51 years experience building implements for the farmers of America we have never put out a machine that met with such general and enthusiastic approval as the

Moline-Universal Tractor

The great demand for this tractor made necessary the erection of the largest tractor factory in the world, which is now in operation.

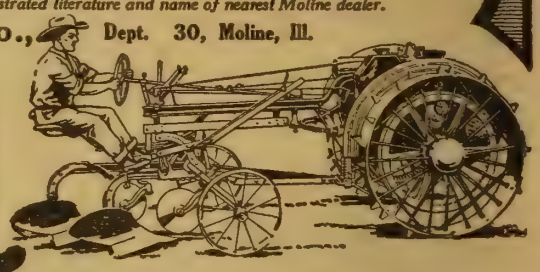
This proves that the Moline Universal meets the pressing need of American farmers for a practical machine that will take the place of horses.

You can rely upon this tractor for *All Field Work*, from preparing the seed bed to harvesting the crop—pulls the usual 5-horse load; gives you 10 to 12-H. P. for belt work. One man operates both implement and tractor.

Write us for illustrated literature and name of nearest Moline dealer.

Moline Plow Co., Dept. 30, Moline, Ill.

The Moline Line Includes
Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Sowers, Listers. Manure Spreaders, Mowers, Plows (chilled and steel), Reapers, Scales, Seeders, Stalk Cutters, Tractors, Farm Trucks, Vehicles, Wagons.



HIDES AND FURS.

Something New to Consider In Selling Furs

We have created a fur commission of three experts who have judged furs for years, to protect you. They grade every pelt you send us and price it according to highest market reports. You don't have to rely on the judgment of only one man. This may sound unusual. But for a firm of our size it is simply good business. We are the largest firm in our line in America. It is up to us to be the leader. We have large customers to supply. *You* have to be protected and satisfied if we are to receive a steady supply of furs. And we believe we will make more in the end by giving *you* more. We want high-grade pelts, and are helping trappers to get them by our free premium system—to equip all trappers who trade with us.

FREE TO HUNTERS AND TRAPPERS—AUTOMATIC REVOLVERS, GUNS, TRAPS, etc.—who join our co-operative plan. So don't be tempted to sell furs elsewhere until you read the particulars of this plan. We believe it will make a big year for both of us if you take advantage of it. Write for our Fur Club News, Fur Market Reports, Premium List, and List of Prices. All of these will be mailed to you free, upon request.

MEASURING HAY IN STACK

A Simple Rule Whose Application Will Accurately Determine Tonnage in Hay Stacks, Being Applicable Only to Long Stacks.

THE problem of measuring hay in the stack is met with very frequently on grain-belt farms. Thousands of tons of hay are sold in the stack every year, for which it is necessary to have some method of measurement, and besides, an estimate of the amount of hay in the stack which will be used for feeding is often desirable. To determine the tons of hay in any given stack is difficult because of the peculiar and varying shapes in which stacks are built and also because of the variation in the compactness of hay, which makes it hard to find an accurate factor for calculating tons when the cubic feet have been found.

However, a method has been worked out recently based on several years' investigation in measuring hay stacks of various shapes and sizes and it may be depended upon to give a reliable estimate of the tons of hay in any ordinary stack. It is probably as accurate for practical purposes as any method

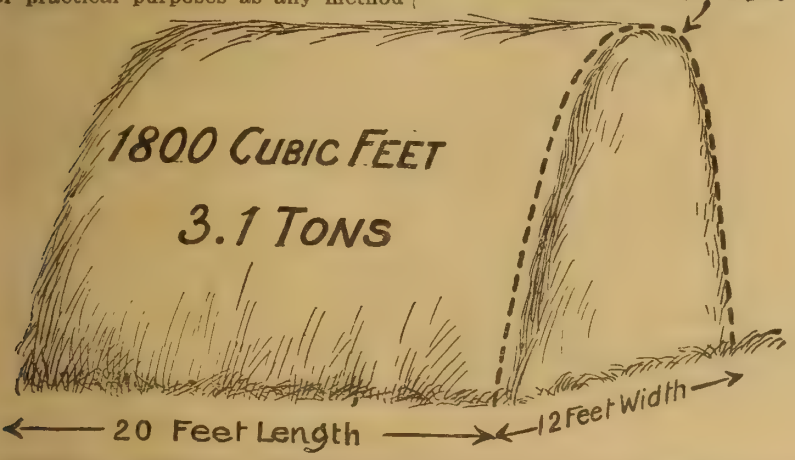

FIGURE 1—HAYSTACK WITH SLOPING SIDES—MEASUREMENTS NECESSARY FOR DETERMINING WEIGHT OF STACK ARE INDICATED.

that can be used and may readily be understood by recalling a few common rules of arithmetic.

In order to illustrate this method let us consider the ordinary stack or rick as shown in Figure 1. The first step is to find the number of cubic feet which it contains, and, therefore, it must be measured. A long tape is best for this purpose. The procedure is as follows: First, measure the length or long way of the stack as indicated in Figure 1; then take the width, which is also indicated in the figure; and then the "over." This last measurement is the distance from the ground close to one side of the stack up over the top to the ground on the opposite side. The "over" is shown in Figure 1 by the dotted line near the end of the stack. It may be taken over the middle of the stack as well as near the end, but can be shown in a drawing better at the end. In Figure 1 the length of the stack is twenty feet, the width twelve feet and the "over" thirty feet.

With these measurements we may readily calculate the number of cubic feet in the stack. This is done by multiplying the length by the width, then multiplying this result by the "over" and dividing the whole result by four. For instance, multiplying the length, twenty feet, by the width, twelve feet, gives us 240; multiplying this result by the "over," which is thirty feet, gives us 7,200; and by dividing this last result by four we get 1,800, which is the number of cubic feet in the stack.

This rule will hold good for all ordinary haystacks with this modification: If the stack to be measured is very tall or has a rather flat top and sides that are straight up and down, like the stack in Figure 2, the number to divide by is three instead of four. In other words, if the stack is shaped like the one in Figure 2 use three to divide by in order to find the cubic feet, but if it is shaped like the one in Figure 1, with sloping sides and a rigid top, use four as the divisor.

To make this clearer let us find the cubic feet in the second stack, which is shown in Figure 2. Its length, as may be seen, is twenty-five feet and its width eighteen feet. By multiplying twenty-five by eighteen we get 450. This figure multiplied by the over, which is thirty-six feet, gives us 16,200. Then by dividing by three, the correct number for this shape of stack, we get 5,400 as the number of cubic feet in the stack.

We are now ready to calculate the tons of hay in these stacks. This consists in dividing the number of cubic feet in the stack by the number of cubic feet in one ton of hay. The latter figure will vary according to the kind of hay and the period of time it has been in the stack. The federal department of agriculture has investigated this matter and determined the cubic feet per ton for timothy or timothy and clover hay mixed, and, according to their investigation, hay which has been standing in the stack less than thirty days will average approximately 590 cubic feet per ton; hay standing from thirty to sixty days will average 580 cubic feet per ton; and hay standing from sixty to 155 days will average 515 cubic feet per ton.

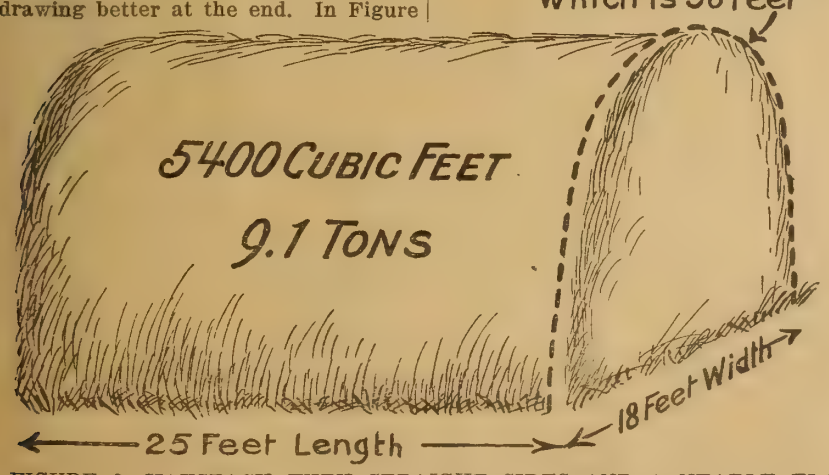

FIGURE 2—HAYSTACK WITH STRAIGHT SIDES AND A NEARLY FLAT TOP—NECESSARY MEASUREMENTS ARE INDICATED.

Assuming that the stack in Figure 1 had been standing for fifty days at the time it was measured, with the foregoing figures we may determine the weight of hay in it by dividing the total number of cubic feet in this stack by 580, which is the number of cubic feet per ton in stacks from thirty to sixty days old. This gives us 1,800 divided by 580 or 3.1 tons. In the case of the stack in Figure 2, which we may assume had been standing less than thirty days, its weight is found by dividing 5,400 by 590, the number of cubic feet per ton in stacks less than thirty days old; the result is 9.1 tons. In a similar manner the weight in tons for any stack of clover or timothy hay may be calculated if the number of cubic feet is known, together with the approximate length of time the stack has been standing.

Is Your Gun Rusty?

THERE are many trusty old shotguns in this country that once were cleaned and oiled *and used* with great frequency. Today they lie idle, rusty, almost forgotten. Yours may be one of them.

What is the reason for this? Does the lure of the fields and woods no longer hold attractions? Have we lost our love for good sport?

No—these things are not responsible for the rusty gun. *The absence of game is the cause.* And the cause must be done away with before the gun is used again as it once was.

The cure lies in game farming—in the breeding of game birds to replace those we have lost.

Already, in many places, good shooting has been restored by game farming. The same thing can be done where you live. You can take part in it if you will.

A game farm is easy to establish and maintain. Also there is money in it as well as pleasure. The prevailing scarcity of game has resulted in high prices being paid for game birds and their eggs. The demand from city markets is always greater than the supply.

We will gladly tell you how you can run a game farm and make it pay, or how you can induce others to raise game for you to shoot. Write today for our 64 page booklet, "Game Farming for Profit and Pleasure". It is sent free on request. You will find it interesting reading. Please use the coupon below.

When Your Gun is in Use Again

When you begin using your gun again remember to load it with powder that can be depended upon for accuracy at all times. Ask your dealer for shells loaded with Hercules Smokeless Shotgun Powder—either Infallible or "E. C.". Both can be obtained in all standard makes of shells. They are of high and uniform quality—give light recoil, high velocity, even patterns.

Law Questions.

Landlord and Tenant—Repairs.

A Subscriber, Edgerton, Wis.—(1) Is a tenant on a farm required by law to keep the fences and buildings in as good repair as they were when he took the place as tenant? (2) If the land owner sees that certain work about the crops is necessary and the tenant is unable or unwilling to perform such work, has the owner a right to do it and charge it to the tenant?

Answer.—(1) He is. (2) A landlord has no right to go upon a rented place to do the tenant's work unless there is an agreement to that effect in the renting contract.

Foreclosure of Mortgage.

A Subscriber, Butternut, Wis.—I bought a piece of land, and gave a mortgage on it for $550 to secure five notes of $100 each payable on or before the end of each year respectively. The last note will be due in 1919. (1) Can the holder of the mortgage foreclose it if I am unable to pay the second note, the interest being paid in full? (2) When can the holder of the mortgage foreclose it? (4) Can I pay off all the notes at any time? (4) If the holder of the mortgage forecloses it will he have to notify me and how long will I have to redeem the land?

Answer.—(1) It depends upon the terms and conditions of the mortgage. It may provide for foreclosure when any note is due and unpaid. (2) Foreclosure can be made whenever the mortgage provides for it. (3) You can. (4) You must be notified and you can redeem the land at any time before it is sold.

America's most popular buggy
is shown on page 1489 of our big General Catalog. It is illustrated in colors with full description of material and construction. Look in the catalog and see the price that made this buggy so popular.

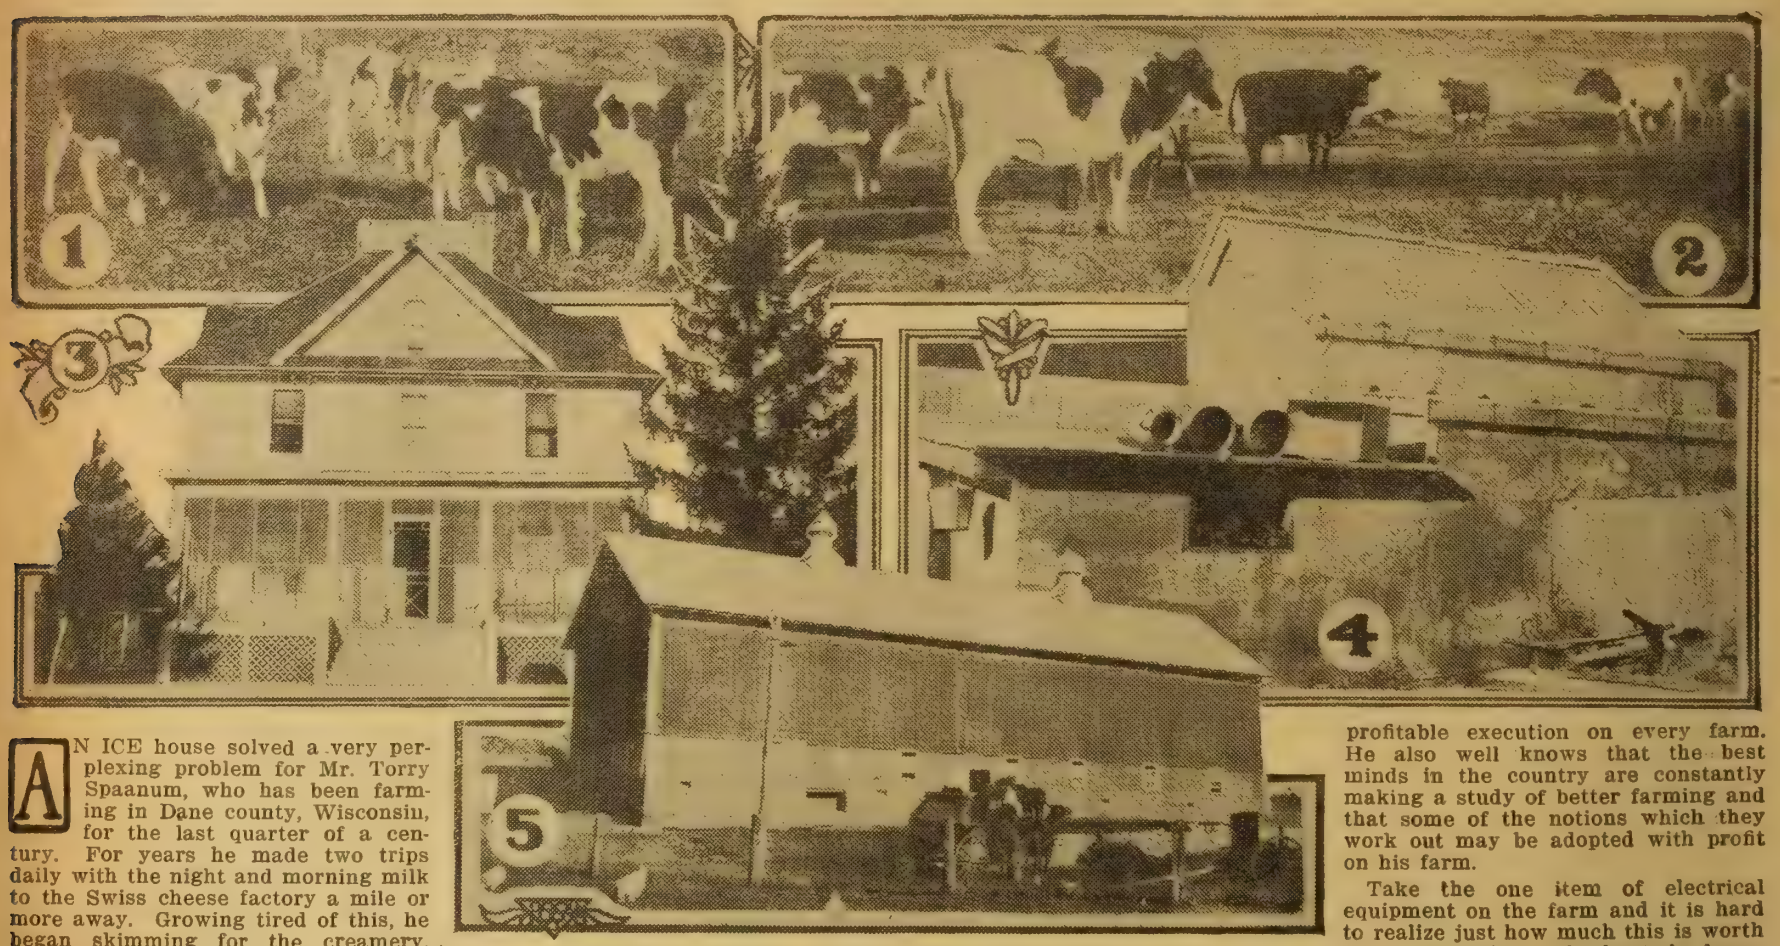
SOLVES COOLING PROBLEM.

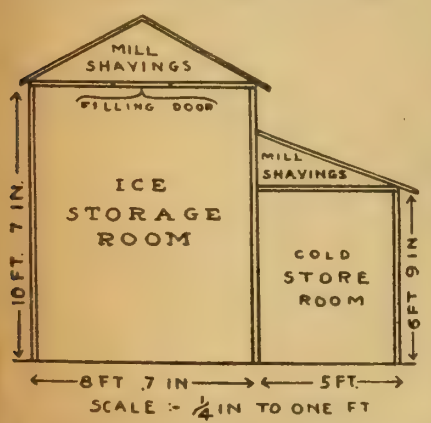
Dane County, Wisconsin, Farmer Saves a Great Deal of Hard Work and Delivers Best Cream to His Creamery Through the Aid of Ice House and Cooling System.



SCENES ON THE SPAANUM FARM, DANE COUNTY, WIS.
(1) Some of Mr. Spaanum's young stuff. (2) A view of the Spaanum herd. (3) A homelike farm home, modern and convenient. (4) Mr. Spaanum's dairy house in foreground and ice house at back. (5) The Spaanum dairy barn, where ideal use is made of a side-hill location, with the aid of concrete retaining walls.

AN ICE house solved a very perplexing problem for Mr. Torry Spaanum, who has been farming in Dane county, Wisconsin, for the last quarter of a century. For years he made two trips daily with the night and morning milk to the Swiss cheese factory a mile or more away. Growing tired of this, he began skimming for the creamery. But that took a long trip to town in all kinds of weather and on all kinds of roads. Now the Spaanum farm is equipped with an ice house, which in two years has saved many a trip to town, given a great deal of time for other work and enabling Mr. Spaanum to deliver cream to his factory which ranked first in sweetness and flavor.

This ice house has been in use two summers. Mr. Spaanum says if he should lose the ice house by fire or a cyclone and be unable to get another he fears that he would have to quit dairying, because this splendid convenience has nearly spoiled him for heavy work. What he has done may be done on any Wisconsin farm where ice is plentiful. The cost of such an ice house is soon paid by increased efficiency and convenience, to say nothing of the time saved. In this cooler butter and eggs and other farm produce may also be stored awaiting convenient time for marketing or better prices. Mr. Spaanum now makes a



FRONT ELEVATION OF ICE HOUSE.

trip to town with cream only once in four days in hottest weather and his buttermaker says that cream from the Spaanum farm reaches the churns in better condition than that brought in by any other patron. The ice house is, of course, only one method to accomplish proper care of cream. Some prefer cooling tanks with circulating water, but where ice can be gotten as easily as it can from the lakes in Dane county, the ice house is the best. To the writer Mr. Spaanum says: "I hope you will convince every farmer that an ice house is worth its weight in gold."

There are other interesting conveniences on the Spaanum farm. A gasoline engine which runs the separator also generates power for a dynamo, which charges electric batteries and provides electric lights for every farm building. This plant cost about $400 installed and Mr. Spaanum is just as enthusiastic about his electric lights as he is about his ice house. He can step to a barn door and turn a switch and make every stall in the barn almost as light as day. He can turn another switch and flood the hay loft and granary with light. This electric convenience reduces the fire hazard—the expense is small. During eight months of the year the batteries may be kept charged without extra expense, as the engine must be operated for the separator. During the other four months of the year the engine must be run only an additional half hour. In four years Mr. Spaanum has spent nothing for repairs on his electric equipment. He has a windmill which puts water into a tank which serves the dairy barn, hog house, troughs, water tanks, etc., so that by turning a faucet there is water available for any of these places. Mr. Spaanum has brought his farm out of the old lantern classes. Under the new modern system he says he can save the help of one man during a considerable part of the year.

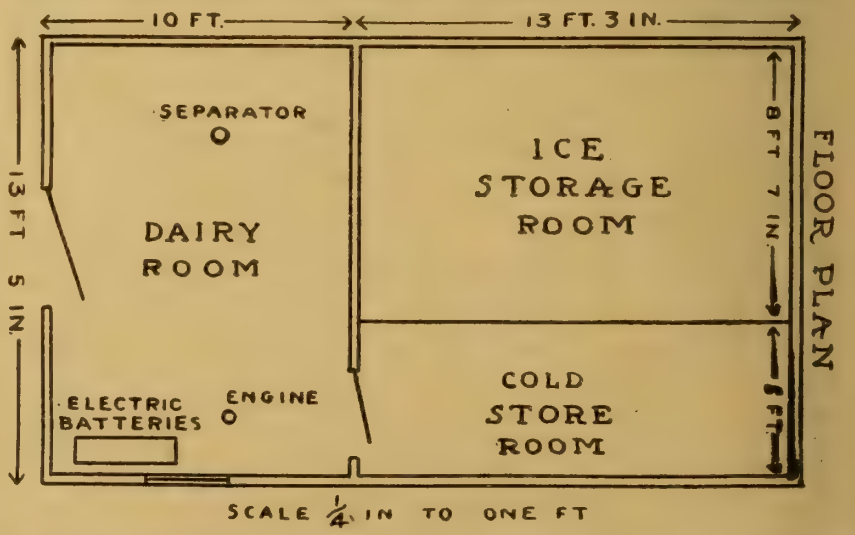
Mr. Spaanum has modern dairy equipment and a system of barn ventilation and has made liberal use of concrete and stone for retaining walls on his hillside farm. Although essentially a dairyman, Mr. Spaanum keeps enough hogs to utilize his skim milk. Looking back over the years he said he made a mistake in not long ago picking out a good dairy breed and sticking to it. He is now building up a Holstein herd and has recently purchased a pure-bred Holstein bull calf of splendid breeding. This successful Wisconsin farmer has tested his cows for twenty years, always selling off the "boarders." His cream checks average about $200 per month from thirty grade cows and he skims a cream testing about 35 per cent. He grows enough corn for his 12x40 silo and husks enough to finish his hogs for the block. He has had alfalfa for a number of years, at one time as much as thirty acres.

This successful dairyman is setting an example for his neighbors. He has a modern, comfortable home, clean and sanitary barns and fine stock, but one of the first things he shows a visitor is his ice house.

Progress is the spirit of the day on Wisconsin dairy farms and Mr. Spaanum may well be called a leader along many progressive lines. Whenever anything new is suggested he does not turn up his nose at it and say that it is not practical, but he takes a little time to carefully investigate. He well knows that there are many newfangled ideas which cannot be put into profitable execution on every farm. He also well knows that the best minds in the country are constantly making a study of better farming and that some of the notions which they work out may be adopted with profit on his farm.

Take the one item of electrical equipment on the farm and it is hard to realize just how much this is worth to the men who work about the barns or the women who look after the affairs of the home. A great many people might have urged that this farm could be run without this equipment, and so it might, but Mr. Spaanum has found his investment in this regard to be worth while. Water can be pumped by hand or drawn from a well and Mr. Spaanum could run his farm with water secured in that way. But he has learned that his time and energy can be put to more profitable things, and it is just this discrimination in applying the conveniences and comforts which pay that has placed Mr. Spaanum in the forefront of successful farmers of his neighborhood.

Ice House on the Spaanum Farm.



THE above is a floor plan of Mr. Spaanum's ice house adjoining his dairy. There is a cooling room five feet wide, about seven and one-half feet high and thirteen feet long where the cream is cooled and his butter and eggs and other products are stored. The average temperature of this room the past summer was 34 to 38 degrees in the hottest weather. As soon as the cream is separated it goes to the Mt. Horeb creamery. The ice storage room is eight feet by thirteen feet and ten feet high and has a capacity of thirty-two tons. Mr. Spaanum did the carpenter and concrete work on this ice house and, although no accurate record was kept, he thinks the cost was about $200 aside from his labor. The house is built into a side hill with concrete walls on a sandstone base. Inside of the concrete are 2x8 studdings, the space between being filled with mill shavings and these are held in place by a water-proof paper. Outside of this are nailed inch strips. By nailing the outside layer of lumber to these strips a small dead air space is formed. The storage room is filled with ice from overhead.

Mr. Spaanum buys his ice in Mt. Horeb, as he has no lake or stream near by. He pays 40 cents a ton, and figures that the cost is about $1.20 a ton, including hauling, or a total of $40 to fill his ice room to capacity. Where a farmer has a lake or stream near by this cost can be greatly reduced.

Cow-Testing Reports.

Langlade County Association.

To the Editor:—In September there were 437 cows under test and forty-one dry. The average production for 437 was fairly good in spite of the fact that thirty-three dried off during the month and thirty milked but part of the month, freshening too late. There were eighty-nine two year olds in the number tested and seventy-three three year olds. The average production of milk and fat was 455.2 and 23.62 pounds respectively with an average per cent of fat of 5.19. This makes a total of 198,922.4 pounds of milk and 10,321.94 pounds of butter fat. The total amount of this butter fat at Elgin prices was $3,303.02, or $94.40 for each of the thirty-five members of the association. If all the 1,400 farmers in this county received a similar income each month from a dairy herd of twelve to fourteen head the county would be doing $1,500,000 worth of business every year. This would not include the surplus stock sold. We figure there are about 7,500 dairy cows in this county, or enough to organize fifteen associations, each with more cows than the one now operating. If each association showed figures equivalent to the foregoing it would mean an $800,000 a year business—a sum far in excess of the business actually done. Where can we find a better argument for getting into the cow-testing associations?

In September Head & Swensen's Guernsey, Molly, again took the lead, producing 57.25 pounds of fat. Two notable examples of Jersey persistency are those of Bert Wright's grade Jersey, Blossom, which freshened in March, still making a little better than forty pounds of fat at twenty-two years of age and Chas. Shotte's grade Jersey, Susie, freshening last December and still in the honor list.

Bert Wright's herd has again the highest average for the month, making 805.1 pounds of milk and 37.23 pounds of fat with 4.62 per cent test for eight cows. Chas. Schott's herd has the highest test—7.27 per cent and average 32.02 pounds of fat.

September list of forty-five-pound cows is as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Head & Swensen					
Molite, G. G...	8	6-20	1218.0	4.70	57.25

John Reckinger, Official Tester.

Feeding Silage and Grain.

To the Editor:—Most of the farmers in the Baraboo Cow-Testing Association are feeding silage and grain. Those who have clover and alfalfa hay and home-grown grains, such as oats and corn, are not buying much feed, except some bran. While feed is high priced, the price of milk and butter fat is also high. The following table gives the names and records of the cows in this association which have produced more than forty-five pounds of butter fat during the thirty-day period ending October 23d:

Owner and breed	Lbs. milk	Per cent fat	Lbs. B. fat
Rollo Webster, G. H.....	980	5.3	51.9
L. R. Siebecker, G. H.....1176		4.3	50.6
Edward Egerer, Guern...	967	5.0	48.4
Glenn Johnson, Guern....	930	4.9	46.0
Edward Egerer, Guern...	747	6.1	45.6

Official Tester, Baraboo Cow-Testing Association.

River Falls and Roberts Association.

To the Editor:—There were twelve cows in this association which produced over forty pounds of butter fat in October. This is an increase of three in this production classed over the month previous. There are a great many dry cows during this time and there are 432 cows in the association, of which 288 were under test in October. Every member of our association is using a pure-bred sire. This shows that they are leaning towards more and better profits.

The following table gives the names and records of the cows in the association which have produced more than forty-five pounds of butter fat during the period of thirty days ending October 30, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Olton Bros					
Topsy, G. H....	4	9-25-16	1146	4.4	50.4
H. R. Taylor

C. G. Carlson, Official Tester.
J. M. May, Secretary.

Reedsburg Association.

To the Editor:—Fall pastures have been comparatively good so that little feeding of grain was done. Members of this association have sold a head of "boarders" during the month, indicating that they are progressive and do not wish to waste high-priced feeds on unresponsive cows.

The following list gives the names and records of all cows that produced forty-five or more pounds of butter fat during the month of October ending November 6, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Wm. Alexander

Alvin W. Wardas, Official Tester.

Cow Testing.

To the Editor:—Our October report shows two cows in the fifty-pound list. The high cow belongs to Naber Farm Company, Cecil, Wisconsin, and is a grade Holstein. She produced 822 pounds of 65 per cent milk or 51 pounds of fat.

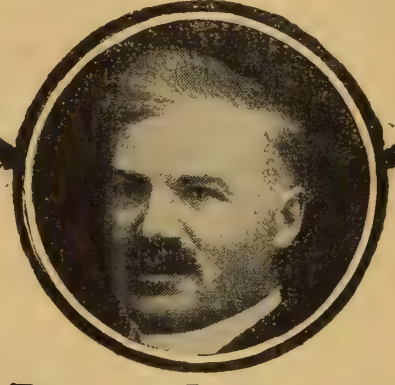
The other cow belongs to Alfred Olson, of Underhill, and is a grade Guernsey. She produced 915 pounds of milk and 50.3 pounds of fat. The high herd in fat production belongs to Julius Bartlett, Underhill, Wisconsin. This herd consists of twelve cows which average 703.4 pounds of milk and twenty-six pounds of fat covering a thirty-day period.

C. M. Rydberg,
Official Tester.

Our readers frequently write and ask where they can buy some product that they need. If your local dealer or merchant cannot supply you, tell us his name and address—maybe we can be helpful to you and to him. We are here to serve both of you.

THE WISCONSIN FARMER
MADISON -:- WISCONSIN

Dr. Roberts has no more fear of contagious abortion in cows than if the disease did not exist, if cows are free from tuberculosis. He is absolutely master of the situation. You can do what Dr. Roberts does if you will do what he tells you to do.



Dr. David Roberts' ANTI-ABORTION Drives Out Cow Abortion

The owners of over 5000 herds of cattle in the U. S. say that Dr. David Roberts' Anti-Abortion Treatment does wipe out contagious abortion. These people speak from experience. They *know*—they do not *guess*. They are to be believed rather than people who merely give it as their opinion that contagious abortion cannot be successfully treated. Let us give you one example—one of the 5000—which gives indisputable proof.

A Minnesota Example

Less than three years ago Dr. Roberts went to Minnesota and bought a herd of pure-bred Holsteins known to be afflicted with contagious abortion. It was a desperate case. Many treatments had been tried without success. But Dr. Roberts did not hesitate. He began his treatment on the infected animals and all traces of the infection were wiped out. The cows and heifers dropped healthy calves, carried full time—a good strong calf for every cow. Three of the cows made butter records of 14 lbs., 19 lbs. and 22 lbs. of butter per week. One has since treatment been given a yearly butter record of 721.49 lbs. and 18,563 lbs. of milk.

Dr. Roberts' Anti-Abortion Treatment is shipped, with instructions, direct from the laboratories at Waukesha.

Kinsman Beauty (and Calf) No. 139476
Owned by Dr. Roberts
Year's Record:
675.60 lbs. Butter
16,032.50 lbs. Milk

The Neighbor's Dairy.

Any dairyman may learn valuable lessons from his neighbor's cow. Men may not have been conscious of this yet. It certainly has been one of the greatest factors in upbuilding the business. In proof of this one has only to consider the locality wherein one man has founded a dairy herd. Soon some progressive man followed his lead. Then others came into line. Before many years practically every farm in the community was devoted more or less to dairying.

In a western state there is a city of more than 10,000 that has sprung up in a very few years through mining, manufacturing and railroad development. Milk was, of course, required by the citizens of the city. Dairies filled with red cows or cows which were red with white faces were common. Two years there was not a herd of first-class dairy cows in the county. Then one enterprising young man came from the East and established a dairy with cows either high grade or pure bred of one of the popular breeds. Many doubts were expressed as to the probable success of his venture. Yet it was to be plainly discerned that men were interested. In a year or less it was very evident that cows of that herd were yielding about double the amount of milk that was being secured from other cows. The cows of that dairy were very much in demand by buyers. However, none were sold. Finally an appeal was made to the state agricultural college. A man was secured to go to dairy sections and to buy real dairy cows. Through that and other efforts the country was finally quite well stocked with dairy cows.

Neighbors have opportunities to swap ideas. If they are real neighbors they will do that. In one state it is estimated that the average butter fat production is 140 pounds per cow. There is one herd the record of which, including a number of two-year-old heifers, is above 400 pounds. This herd is neighbor to all herds in the state. All dairymen might learn from it. Many are learning valuable lessons in breeding, selection and feeding.

A dairyman in a country where the climate is comparatively mild learned quite by accident that those of his cows which had only the shelter of a shed open on one side did very much better for him than did those closely housed. He accordingly constructed a large open shed and thereafter used his fine, large barn only during milking hours. Neighbors saw the wisdom of his practice and have adopted his method. They are no longer building large, expensive barns, but have open sheds with a small milking room instead. They are saving money and have healthier cows and are getting better results. On all farms are things of interest and lessons to be learned. He who observes the good and the undesirable things of his neighbor's herd and dairy and who obtains a profitable lesson therefrom is wise.

Care of Milk Cans.

In justice to the farmer, milk dealers should give considerable attention to the question of washing the cans before they are returned. If the cans are allowed to go back unwashed to the farmer, it is a very difficult task for him, with his limited facilities, to clean them.

In a circular letter recently sent to milk dealers by the Dairy Division of the department, it was pointed out that bacterial counts, made from cans which had been washed and rinsed in the ordinary manner, showed that there were from 300,000 to 18,000,000 bacteria in each can, with an average of 4,600,000. If ten gallons of milk were put into one of these cans there would be added more than 100 bacteria to each cubic centimeter of the milk. That is to say, this is the least number that would be added. Whereas, it was pointed out, with a little steaming these same cans could have been rendered practically sterile.

One dealer who recently installed a modern washing machine employed a bacteriologist to test the results. It was found that less than 200,000 bacteria were in a can, and among them were no undesirable types. Bacterial counts of cans treated by a less efficient steaming device which this dealer had formerly employed ran as high as 20,000,000 bacteria to the can, including some undesirable kinds.

There are a number of different types of cleaning machines on the market. The aim of all the efficient ones, however, is the thorough cleansing with washing powder and water, rinsing, sterilization with steam, and rapid drying. After this the can should be covered and kept from contamination.

One of the simplest of the machines is a jet device, by means of which sprays of cold and hot water and of steam are successively forced into the can. This type also is equipped sometimes with a drying attachment by means of which a draft of dry air is forced into the can. Another type is the brush machine, in which cans are brushed out with washing powder and water and then rinsed. After washing they may be steamed by a spray of steam. Some of the largest machines are fitted with powerful pumps, the cans in an inverted position being run through the machine and sprays of soap and water, rinse water, hot water, and steam successively forced into them under considerable pressure. They are then dried in the same machine.

The drying of the cans is an important factor, for it not only leaves them in a much better condition, but it tends to prevent rust. The cover also must not be neglected. It is as important that it be as thoroughly cleansed and sterilized as the can itself. It is not a good plan to put the cover on the can until the latter is quite dry. In the interval the can should be kept in a clean place where there is no dust or contamination.

On the farm, cans, pails, and other utensils may be sterilized very efficiently with an inexpensive sterilizer, which is fully described in Farmers' Bulletin 748. This bulletin may be obtained upon application to the department.

Liberal Feeding of Dairy Cows.

The successful stockman has ever been a liberal feeder. The stingy feeder or the one who measures out feed in meager quantities is never to be ranked among the successful. A visit to a barn recently where records of high rank, and one of them possibly a world's record, are being made, showed the boys feeding a large variety of concentrates in liberal quantities along with first-class alfalfa and silage. True, each cow was being fed according to the amount of her milk production, yet the allowance was very generous. To feed each cow in proportion to her daily milk flow is economical and need not detract from feeding an amount that will stimulate her greatest milk flow.

A higher feed bill usually goes with cheaper production per unit. Recently some figures from a herd were shown. One cow that had eaten more feed than any other in the herd had at the same time produced butter fat at one-third the cost, as shown by some others in the herd. A hearty, rugged dairy cow has a vigorous appetite. To feed her well is to enable her to develop her full capacity. Judgment, of course, must be used and feeds that are economical and suitable must be supplied. For heaviest production and for cheapest production liberal feeding gives best results.

A Good Canadian Cow.

There are nine Holstein cows which, under official test, have produced over forty pounds of butter (not butter fat) in seven consecutive days. One of these is the Canadian cow, May Echo Sylvia. Lately she produced 39.36 pounds of butter fat in seven days. In thirty consecutive days this cow produced 135.8 pounds of butter fat and 854 pounds of milk. In sixty days she produced 258.7 pounds of fat and 7,927 pounds of milk. In ninety days the yield was 370.9 pounds of fat and 11,703 pounds of milk. For seven, thirty, sixty and ninety days May Echo Sylvia produced more milk than any other cow among those that have been given official test for corresponding periods. In a single day she produced at one time 4.48 pounds of fat and 102 pounds of milk. Her sire is Inka Sylvia Beets Posch 122780 and her dam May Echo Verbelle 223724. She is not only owned in Canada but was also bred there.

It is cows of this kind that are invaluable as producers of stock for breeding purposes. It would be hard to pay too much for a bull calf, individually good, out of such a cow. Similarly a heifer out of such a cow is invaluable. Men buying dairy bulls are sometimes more interested in the producing capacity of the dams of the bulls they are about to purchase than the individuality of the bulls themselves. This, to a certain extent, is a mistake. We should first look for individuality of the animals themselves and then study pedigrees. Even the small dairyman can afford to buy high-priced bulls, for, under proper management, such sires will increase the efficiency of the herd enough to more than justify the price.

BURTON

Wisconsin Experimental Station Favors Explosives for Clearing

"The use of explosives to pull stumps involves little capital, few and simple tools and requires no experience," says the Wisconsin Experimental Station.

But by using Burton "Good Luck" Dynamite for farm improvements, you derive not only these advantages but more.

For instance, because of its power you can use less than is ordinarily required; because of its uniformity each stick is identically the same in character; because of its action you can enrich the soil as well as remove the obstruction.

There's no limit to the usefulness of "Good Luck" Dynamite and no reason why you can't make your farm more profitable through its use.

Perfect distribution facilities assure quick deliveries

Put your difficult farm-clearing problems up to us and we'll advise you what to do. Remember, too, if your dealer doesn't handle it, write to us and we'll give your order attention.

BEAUTIFUL XMAS SURPRISE PACKAGE FREE

Solve This Puzzle

Here are seven sheep in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this we will send you as a prize, a Christmas surprise package, containing 42 assorted pieces of beautiful Christmas cards, seals, tags and stickers. This is one of the most artistic Christmas packages put out. We will also send a certificate of entry in our grand contest for a $395 Saxon Automobile. All you have to do is to enclose 2 two cent stamps in your letter to pay postage and cost of mailing.

Saxon Car Given Away

Remember the Saxon car will absolutely be given away at the close of the grand contest. In case of a tie a Saxon car will be given to each person so tied. Send at once so you can be entered in this great contest. Full particulars by return mail.

SAXON EDITOR, 563 Popular Bldg., Des Moines, Iowa

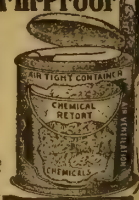
Comfort Indoor Closet

Odorless Sanitary Germ-Proof

Every home without sewerage needs one. Most convenient, meritorious home necessity in a century. A boon to sick people. Can be placed anywhere in house.

Makes Outdoor Privy Unnecessary

Put a warm Comfort Toilet in your home, a guarantee of healthy, sanitary conditions. Germ-life killed by chemicals in retort. Emptied once a month—no trouble. Needs no other attention. Boards of Health endorse it. Write now for literature, prices, etc. Agents Wanted—Exclusive territory.



SENT ON 30 DAYS FREE Trial

Poultry Partnership.

A. S." is an experienced poultry and desires to know how the ds of both poultry and eggs l be divided where the work and ence is balanced against the l:

se tell me if you can, what is sual equitable arrangement to between a landowner, who fur- the feed and poultry house, and ne who proposes to furnish the nd care. One who is experienced ing geese, chickens and turkeys large scale, both for eggs and t purposes.

umstances would play an im- t part, whether the one who fur- the labor is a tenant on the d's farm. Also, whether a or a paid employe. If the for- the opportunity the poultry have in the matter of picking ttered grain would amount to erable in favor of the one who urnish the labor. If the latter, d would all come from the land- This may seem like a small item, counts for a good deal where ing must be purchased.

ming that the proposed chicken is a tenant and not a farmer, at his experience would count ood deal in the matter of get- e most from each 100 pounds of bout the best thing that could would be to break the net pro- n two. No mention is made as is to furnish the poultry; this need to be weighed in the bal- nd allowance made. So many enter into an arrangement of d that an outsider with no defi- owledge of the case cannot say ly, though a general plan can en that would no doubt be le to your case.

extensive farmer, a professor University of Illinois, hires a to farm his half section of fer- d. The poultry flock is a fix- the place, just the same as the and cows. The tenant must he hands, for which he gets ll the poultry that is needed e use is the tenant's right. The s from what is sold is divided nd share alike between land- l tenant, the latter to raise as as little poultry as he sees fit. same with the butter made, llord usually taking his share r use on his own table.

er tenant who lived on a farm was given the use of a poultry. This was something n just market stuff, the land- ing worked up a good trade in d eggs for hatching at very ative prices, such as farmers pay for heads of their yards. dlord to furnish everything, nt to supply the labor, with ilege of using all eggs not or sitting purposes. This was nall flock and there were only ough surplus eggs for home tion.

enant was likely to move at and so a stipulated sum was d for each chicken. The mar- e at that time was about 35 cents for a three-months-old chicken, and to encourage the tenant to do a good job in the matter of care 50 cents each was to be paid for the chickens at three months old. The tenant was rather a rolling stone and desired to change quarters before the chicks were all the stipulated age. However, the woman, for she it was who was the business end of the family, was cheerfully paid the 50 cents each and the chickens taken to the home of the landlord, where a clean colony house awaited. It was very satisfactory to both employer and employe. The former was short on time to care for the chickens and the latter was short on everything only time and so it helped her to make fully as much money during the ten weeks they worked at the place, as her husband did on the farm.

The writer has been in the poultry business most a lifetime and other duties are crowding so hard that an offer of an experienced poultryman who would do the work and to get half the net proceeds would be hailed with delight. This would mean a man who could make the most from the investment, especially in the matter of feed, which is, everything considered, pretty high.

Farmer's Garden

State Horticultural Program.

The annual convention of the Wisconsin State Horticultural Society will be held in the assembly chamber of the state capitol, at Madison, December 12th, 13th and 14th. A tentative program has been arranged by Secretary Frederic Cranefield, and this will include addresses as follows:

Prof. H. S. Roberts, Prof. G. W. Kiett, Prof. R. A. Vaughn, H. F. Wilson and probably S. B. Fracker, on the subject of insects and diseases.

An address by Dr. E. D. Ball, who succeeds Prof. J. G. Sanders, as state entomologist.

"Taking an Orchard Census," by A. A. Ashbahr.

Annual students' speaking contest.

Discussion of dust control or dust spray.

Mrs. C. O. Strong, of West Allis, and Mrs. G. W. Moore, of East Milwaukee, will talk about community work.

Mr. F. Kern will give an address on marketing fruits in Michigan.

J. G. Moore, and William Tool, Sr., will speak. C. M. Secker and Mrs. S. H. Whittlesey, will handle the subject "Cranberries."

One session will be devoted to the state fair.

In connection with the annual meeting will be held the annual winter apple show which has attracted attention for a number of years and will be well worth seeing.

Ailing Animals.

Sterility in Twins.

After buying a year old heifer calf I am told she is a twin, the other one being a steer. Will my heifer ever have a calf?

The heifer born as a twin with a bull is usually hermaphrodite and barren. However, we do not think this is always the case.

Bots.

I have a bay mare that has bot worms and I would like to know how to cure them.

Bot-fly larvae do not require special treatment unless they lodge in the rectum, in which case they may be dislodged by injecting tobacco water. If plenty of rock salt is allowed for horses to lick they will thus be protected against intestinal parasites to a slight but useful degree.

Yank Out Those Stumps

The Kirstin method clears your land for the plow.

Send To-day For This Book

TURN your sullen, gloomy, profit-eating stump lands into happy, smiling fields that bear rich crops, and put money into the bank for you.

Our Free Book, "The Gold in Your Stump Land," shows you how you can transform your barren stump fields into rich virgin farm land. It shows you photographs of immense stumps it has pulled; it contains letters from the men who pulled them; and it will convince you that the easiest, quickest and cheapest way is with a

Kirstin Stump Puller
One Man — Horse Power

The horse power machine for the big jobs, for the fields of many stumps; it will pull anything it tackles, and, because of its triple power, prevents strain to man, horse and machine. Will clear two acres from a single setting.

The One Man Puller gets the biggest stumps. Double leverage gives you a giant's power; a push on the handle means a pull of tons to the stump. Clears an acre from one anchor.

Every Kirstin guaranteed for 15 years, flaw or no flaw, your money back if the Kirstin bond does not live up to its promise. We guarantee the Kirstin method to clear land *ready for the plow* from 10% to 50% cheaper than any other method.

Money Back Bond
15 Year Guarantee
Warranted saving of 10% to 50% over all other methods.
Profit Sharing Plan

Big Money to those who Order Now. To early buyers in each locality we offer a special opportunity to join in our profit sharing plan. No canvassing; just a willingness to show your Kirstin to your neighbors. Don't wait — send the coupon today.

Thanksgiving Day.

We plow the fields, and scatter
The good seed o'er the land,
But it is fed and watered
By God's almighty hand.
He sends the snow in winter
The warmth to swell the grain.
And the soft refreshing rain.
All good gifts around us
Are sent from heaven above,
Then thank the Lord, Oh, thank the Lord
For all his love.

The Colonial Thanksgiving Table.

It was thirteen years after the arrival of the Pilgrims before Thanksgiving Day was officially recognized by the state, though it was observed generally in the churches and in the homes. A bountiful dinner was an important part of the home festivities and the National Museum in Washington contains a collection of clothing, jewels, cutlery, dishes and glassware which graced those early-day feasts.

There was no centerpiece of flowers or fruits for the table in those days, but instead that place was occupied by the turkey, which was served whole on a huge platter, the carving being the duty of the master of the house. The first course of the dinner was soup. It was brought on in a large soup tureen and individual bowls were filled from it with a pewter spoon. The dinner proper was served on huge plates and included besides the turkey, roast pig, baked squash, white and sweet potatoes, parsnips and preserved fruits. The jelly was served in individual jelly dishes which had tops and tiny glass feet. Celery was served in a big cut glass vase and the salt was put on the table in a glass salt dish as large as a saucer. The drinking glasses were very heavy and evidently meant for service and not for beauty. The knives, forks, spoons, sugar bowls and cream pitchers were usually of pewter.

Thanksgiving Menus.

Thanksgiving dinner isn't a really, truly Thanksgiving dinner unless it is the old-fashioned roast-turkey kind. Of course, a turkey dinner and all the "fixings" takes time and work, but if things are made ready by slow and easy stages a few days in advance nobody need be played out when the great day arrives.

Many things, such as puddings, mince and pumpkin pies, cakes, salad dressing, etc., can be prepared a day or two ahead and even the vegetables can be gotten ready to cook the day before. Here are some menu suggestions for the entire day:

BREAKFAST

Baked apples with thick cream
Buttered toast Bacon
Fresh doughnuts Coffee

DINNER.

Oyster stew
Pickles Celery
Roast turkey chestnut stuffing giblet sauce
Mashed potatoes Baked Squash
Creamed onions Cranberry sherbet
Suet pudding Foamy sauce
Nuts Raisins Pumpkin pie
Coffee

SUPPER

Chicken salad
Brown bread sandwiches
Cup custards Pound cake
Preserves Tea

In preparing the oyster stew each oyster should be carefully handled to remove all bits of shell the liquor from the oysters being strained and added to the water in which the oysters are cooked. Drop the oysters into the boiling liquor, cook until the edges curl and remove with a skimmer. Add the milk and when boiling hot season with a generous quantity of butter, turn in the oysters, add salt and pepper and serve at once.

Chestnut stuffing is delicious. It requires a pound of blanched chestnuts. Boil them until tender, then put through a ricer. Add a cupful of bread crumbs, a half cupful of butter, one and one-half tablespoonfuls of poultry dressing, one-half cupful of raisins, salt, pepper, celery salt and cayenne pepper to taste. Mix thoroughly and stuff the turkey.

Cranberry sherbet is very easy to make. Strain stewed cranberries, add sugar to taste, a tablespoonful or two of lemon juice with a cup of water to a cup of the cranberry juice; freeze and serve in sherbet cups, with the turkey.

The chicken salad should contain a generous portion of apple and celery.

Letter From Champion Bread Baker.

Interest grows year by year in the girls' and boys' clubs and the good they are accomplishing for the young people. The state fairs are helping along the good work by conducting contests between the various clubs over their respective states. That the girls and boys themselves are interested and that they are getting something worth while out of the club work is attested by a letter written by the champion bread maker among the girls at the last Wisconsin State Fair, Miss Mildred Wassweiler. Miss Wassweiler is enthusiastic over her club work and the girls' profitable week at the fair. She writes:

MILDRED WASSWEILER (LEFT), WINNER OF FIRST PRIZE, AND WALBERG DAVIDSON (RIGHT), WINNER OF SECOND PRIZE.

The bread-making contest was held on Wednesday, September 13, 1916, at the Wisconsin State Fair. This contest is held for the purpose of bringing the girls of the different clubs together.

An entry fee of $1 is charged to help cover the expenses of the camp. This fee is charged to campers only. In paying the fee, the campers receive their meals and lodging for the entire week of the fair. The girls who do not stay at the camp pay only about half the entry fee.

Uniform caps and aprons are worn by all girls taking part.

The booths that the girls worked in this year were provided with all necessary utensils, a table, and a wonderful new electric stove. Two girls worked in one booth instead of one because of lack of space.

About nine o'clock we started and had to be finished by noon. All ingredients for the bread had to be brought to your booth before the contest began. Girls from the camp came over earlier and made the slow method, while girls from outside started at nine and made the quick method of the same recipe of bread.

After making and kneading the bread and placing it back in the bowl to rise we had a chance to wash all soiled dishes and straighten up our booth.

The sewing contest was carried on during the bread-making contest. My team, the West Allis team, received third place in the sewing contest.

When the bread was about ready to be baked the electric ovens were turned at high and kept there about fifteen minutes, then turned at low and left there a while, then turned off. After the first fifteen minutes the bread was placed in the oven. During the whole process of baking the oven doors had to be left closed. Every time the oven doors were opened the heat escaped and delayed the process of baking.

The electric stoves were fine. The ovens baked the bread a lovely brown. The crust of the bread was not baked hard and no shortening or milk was put on the bread before or after baking. I think the electric stoves bake bread just as well as any other stove.

This contest was very interesting. It showed the ability of girls of 'teen age, and also the different work accomplished by other clubs. Every girl who took part in the contest experienced something different. I found out that it is just as easy to work when hundreds of people are watching you as it is to work all by yourself. At the state fair the people crowded around the booths and asked many questions and even criticized the work of the girls and the method of work.

I went into this contest just for fun, not thinking of a prize at all, and the first morning of the contest I was positive our team would not take any prize, but the result was just opposite. Our team took first in the bread-making contest.

Wherever a contest of this kind is carried on I hope many girls will enter. If you haven't organized a club, organize one as soon as possible.

Perhaps there are those who would be interested in knowing the recipe we followed in making our bread. It calls for one-half cupful of boiling water, one-half cupful of scalded milk, one tablespoonful of sugar, one tablespoonful of lard, one-half yeast cake dissolved in one-fourth cupful of lukewarm water and about three cups of sifted flour. This recipe makes only one loaf.

Put the lard, sugar and salt in a bowl, pour on scalded milk and the boiling water. When lukewarm add the dissolved yeast cake and gradually the sifted flour. Mix it very thoroughly, then beat it briskly until it is very smooth. Turn on a floured board. The dough should come out of the bowl a smooth, compact mass, leaving the bowl clean. Knead until the mixture is smooth and elastic to the touch and bubbles seem to appear under the surface. Return to the bowl, cover with a clean cloth. Let rise until it has doubled in size. Toss on a slightly floured board and knead. Shape into loaves, place in greased pans. Cover and let rise again to double its bulk. Brush top with milk or butter if desired and bake in a hot oven.

Those interested in organizing a club should write for information to Mr. Buick, 316 Breeze Terrace, Madison, Wisconsin, who is at the head of the organized girls' and boys' clubs of the state.

Light Hot Cakes Without Eggs.

To the Editor:—The man of the house wishes me to tell Mrs. S. H. how I make hot cakes that are neither soggy nor tough. I bake fifteen sized cakes every morning an that number I use one pint of b milk or thick sour milk, a pin salt, one rounded teaspoonful of sifted with one cupful of salt. third cupful of corn meal and a spoonful of melted drippings or

The first morning I stir up a larger batch so that I have left one cupful of batter. I set this for a "starter" and add the oth gredients to it each morning.

If Mrs. S. H. will follow direct am sure she will find her cakes and light and very economic they do not require any eggs.

Mrs. E. P

everything plain and I would l to hear what success the boy h with my plan. —Jo

SOMETHING FOR NOTHING

BUT YOU MUST BE PROMPT

A COMPLETE MANUAL OF CROCHET AND TATTING

By Anna Valeire

This book on crochet and tatting craft is most timely, as these arts in all their forms are very popular at the present time. It contains over sixty designs and combines new and original patterns of rare beauty combined with dainty simplicity and elegant aste. The abbreviations used to esignate the different stitches in tting and crocheting are given and eir meaning explained in full. Instructions are given in detail for very design displayed in the book. herefore, the novice in this art will ave no trouble whatever in working the simple, though seemingly mplicated, designs which have en compiled for her special benefit nd in very little time will find that e may easily attempt the more mplicated patterns intended for ore advanced and experienced edleworkers. The lovely array of sertions, edgings and medallions iggest numerous ways in which ey may be used to beautify both ersonal and household articles. The inty tattings immediately bring to ind handkerchiefs of cob-web fineess. The simpler crochet insertions nd edges suggest pretty bath-room ts and bed linen. There are no id of designs which may be used on esses and lingerie; two yoke patrns which appear in the book make particularly desirable. Designs r luncheon sets, scarfs, curtain ges and panels, and the new round llow tops, and many more things hich will suggest themselves to the orker are all contained in the onderfully complete book on this scinating art needlework.

This wonderful book of working size designs d explicit instructions will be sent Free and epaid if you will send your order for any of following combinations of magazines beore November 10, 1916.

THE REASON FOR THE INCREASED COST OF MAGAZINES

The price of paper has increased er 100 per cent and the cost of s and other materials entering to the manufacture of magazines s caused some publishers to inease their subscription price. The agazines offered below will accept ders from The Library Reading ub until November 10th at the ces which have prevailed for the st year. As an extra inducement promptness, we will give a copy Crochet and Tatting by Anna leire, to all who send us orders fore November 10, 1916.

Remit by P. O. Money Order or Registered Letter and Address all orders to

LIBRARY READING CLUB
30 Irving Place, New York

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

1525—A new and practical frock for mothers' girl. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3⅝ yards of 36-inch material for an 8-year size.

1542—A smart boys' blouse with convertible collar and straight or French cuff. The pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 2 yards of 36-inch material for a 10-year size.

1889—Girls' one-piece dress. The sleeve is a comfortable bishop model, finished with a neat cuff. The pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 3¾ yards of 36-inch material for an 8-year size.

1885—A comfortable undergarment, consisting of ladies' combination corset cover and drawers. The pattern is cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3⅝ yards of 36-inch material for a medium size.

1425—Ladies' house dress with long or short sleeve. It is cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6¼ yards of 36-inch material for a 36-inch size.

1909—A new coat dress for misses and small women. Cut in 4 sizes: 14,

16, 18 and 20 years. Size 16 requires 6 yards of 44-inch material. The dress measures about 3 yards at the foot.

1900—Ladies' dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 6⅜ yards of 44-inch material. The skirt measures about 3⅜ yards at the lower edge.

1908—Ladies' night gown. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6⅛ yards of 36-inch material for a 36-inch size.

1697—A stylish gown especially designed for mature figures, with sleeve in either of two lengths. The pattern is in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6⅛ yards of 44-inch material for a 36-inch size.

9741—Childrens' Rompers in high or round neck edge. The pattern is cut in 4 sizes: 6 months, 1, 2 and 3 years. It requires 2¼ yards of 36-inch material for a 3-year size.

1906—Girls' dress. Cut in 4 sizes: 6, 8, 10 and 12 years. It requires 1 yard of lining 36 inches wide for the underwaist and 3¼ yards of material for the dress, for an 8-year size.

1899 Waist-1898 Skirt—Ladies costume. Waist 1899 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 1898 cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 7¾ yards of 44-inch material for a 36-inch size for the entire dress. The skirt measures about 2⅝ yards at the foot. Two separate patterns 10 cents for each pattern.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for November 26th.

A Living Sacrifice.

LESSON TEXT—Romans 12.

GOLDEN TEXT—Present your bodies a living sacrifice, holy, acceptable unto God, which is your spiritual service.—Rom. 12:1 R. V.

The first eleven chapters of this letter teach and illustrate the great principles of the Christian life. Paul calls it "my Gospel." Its fundamental principle is that justification regenerates men, and nothing else. The second section is the practical application of these truths.

I. The Exhortation to Gratitude (vv. 1-2). "Therefore," because of the work of Christ on our behalf, we are to present our bodies as living sacrifices unto God, to be used for his glory and service. (See chapter 6:13, 16, 19). Paul urges, he beseeches; he is winsome, though he might command. To "present" technically means, "bring an offering to God." The body is the sum of all human faculties, physical and spiritual. It must not be defiled by being yielded as an instrument to sin, for it is the temple of God. (I Cor. 3:16, 17). A "Living Offering," (not as the bodies of slain animals offered by Jews) is a consecration of the body, and not a destruction of life. The original means that this—the offering of ourselves as a living sacrifice—is a reasonable, rational service. God has the right of ownership of every member of our body, and there never was a day when there was greater need of insisting upon a Christianity that affects the bodies of men than today. Hands, lips, ears, eyes—every member should be constantly presented to him who purchased it by the blood of his own Son. (I Cor. 6:20; I Pet. 1:18-19.) This is a spiritual, religious service because it is our spirit which presents the offering of the body which he inhabits. Too many of us are "fashioned according to this age.'

II. The Expression of Gratitude (vv. 3-8). Or the right use of the gifts of God. (1) Avoid "self-conceit" (vv. 3-5). These verses indicate how important this subject is. Conceit is entertaining an exaggerated opinion of one's own ability. The church has many members, and they do not all have the same office; there is a variety in the unity of the body. So in the church there are many "members in one body," each of which is important; all are essential. (2) "Prophecy" (v. 6), not necessarily foretelling, but the revelation of spiritual truth and experience according to the proportion of our faith (Ps. 39:3), the living, spiritual experience of the presence of God within us. (3) "Ministry" (v. 7). The business side of the church, collecting of its money and the distribution of the poor. Some can best attend to such business. Many churches fail by not selecting wise leaders for this work. (4) "He that teacheth." The true pastor is a combined prophet, pastor and teacher. We are all teaching, whether we wish to or not. It is a privilege as well as an obligation.

III. Conduct Toward All Men (vv. 9-21). The renewed soul needs guidance, encouragement and instruction. (1) "In love" (v. 9). The hypocrite wears a mask. Notice the close connection of "abhor that which is evil" with "cleave to that which is good." The word for cleave means literally to glue it, so that nothing can separate you from love which is the supreme good. "In honor preferring one another" (v. 10). Let others carry the banner—few of us can stand this acid test. (3) "Diligent in business" (v. 11). Whatsoever your hands find to do, do it with your might, being fervent or boiling in spirit, the reverse of the previous exhortation, in which we are thus to serve the Lord. Few need exhortation to be diligent in their own business, but all of us need this exhortation with regard to the "king's business." (4) "Rejoicing in hope (v. 12). Triumphing over trials and difficulties in the way. Looking for that "blessed hope" (Titus 2:13). (5) Patience and tribulation (v. 12). The Latin "tribulum" was the threshing instrument or roller whereby the husbandman separated grain from the husk. Sorrow, distress and adversity are the means for separating men from the chaff of their lives. Sometimes small annoyances, long continued, become great tribulations. (See Joshua 24:12.) (6) Continuing in the school of prayer (v. 12). Steadfast, urgent, pressing, persevering prayer (Luke 21:1). (7) "Given to hospitality" (v. 13); literally, pursue it.

The word "condescend' is not strong enough—it should be literally "borne away" from the living things along the line of the things that are humble.

(8) Living peaceably with all men (v.18); being ready for peace and to do more than your share of reconciliation.

(9) Overcoming evil with good (vv. 19-21). The heaping of coals upon the enemy's head is not the object but the result of returning good for evil.

The only real victory is, "Be not overcome by evil, but overcome evil with good."

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

PART III. "Prince Charlie"

CHAPTER VIII—Continued.

"Major Dreyer says you may enter;" and then, laughing and shivering, the Major's daughter seized Rachel with one hand, Stuart with the other, and making a quick charge, darted into the ruling presence.

"Oh, you bear!" she said, breaking from her comrades and into the bear's embrace; "to keep us out there—and it so cold! I came over specially for—"

And then she stopped. The glitter of the sun on the snow had made a glimmer of everything under a roof, and on her entrance she had not noticed a figure opposite her father, until a man rose to his feet and took a step forward as if to go.

"Let me know when you want me, Major," he said; and the voice startled those two muffled figures in the background, for both, by a common impulse, started forward—Rachel throwing back the hood of her jacket and holding out her hand.

"I am glad you have come," she said heartily, and he gripped the offered member with a sort of fierceness as he replied:

"Thank you, Miss."

But his eyes were not on her. The man who had come with her—who still held her gloves in his hand—was the person who seemed to draw all his attention.

"You two are old neighbors, are you not?" remarked the Major. "Fred, my dear, you have met Mr. Genesee, our scout? No? Mr. Genesee, this is my daughter; and this, a friend of ours—Mr. Stuart."

An ugly devil seemed alive in Genesee's eyes, as the younger man came closer, and with an intense, expressive gesture, put out his hand.

Then, with a bow that might have been an acknowledgment of the introduction, and might have been only one of adieu to the rest of the group, the scout walked to the door without a word, and Stuart's hand dropped to his side.

"Come back in an hour, Genesee," said the Major; "I will think over the trip to the Fort in the meantime."

"I hear. Good morning, ladies;" and then the door closed behind him, and the quartette could not but feel the situation awkward.

"Come closer to the fire—sit down," said the Major hospitably, intent on effacing the rudeness of his scout. "Take off your coat, Stuart; you'll appreciate it more when outside. And I'm going to tell you right now, that, pleased as I am to have you all come this morning, I intend to turn you out in twenty minutes—that's all the time I can give to pleasure this morning."

"Well, you are very uncivil, I must say," remarked Fred. "But we will find some of the other boys not so unapproachable. I guess," she added, "that we have to thank Mr. Man-with-the-voice for being sent to the right-about in such short order."

"You did not hear him use it much," rejoined her father, and then turned to the others, neither of whom had spoken. "He is quite a character, and of great value to us in the Indian troubles, but I believe is averse to meeting strangers; anyway, the men down at the Fort did not take to him much—not enough to make him a social success."

"I don't think he would care," said Fred. "He impressed me very much as Kalitan did when I first met him. Does living in the woods make people feel like monarchs of all they survey? Does your neighbor ever have any better manners, Rachel?"

"I have seen him with better—and with worse."

"Worse? What possibilities there must be in that man! What do you think, Mr. Stuart?"

"Perhaps he lacks none of the metal of a soldier because he does not happen to possess that of a courtier," hazarded Stuart, showing no sign that the scout's rudeness had aroused the slightest feeling of resentment; and Rachel scored an opinion in his favor for that generosity, for she, more than either of the others, had noted t meetings, and Genesee's entire dis gard of the Stuart's feelings.

Major Dreyer quickly second Stuart's statement.

"You are right, sir. He may be sulky as Satan—and I hear he is times—but his work makes amends f it when he gets where work is neede He got in here last night, dead-be from a trip that I don't believe a other man but an Indian could ha made and get back alive. He has h good points—and they happen to points that are in decided demand here."

"I don't care about his good poin if we have to be turned out for hi said Fred. "Send him word he c sleep the rest of the day, if he is tir out; maybe he would wake up mo agreeable."

"And you would not be ousted fr my attention," added her fath pinching her ear. "Are you jealous Squaw-man-with-a-voice?"

"Is he that?" asked the girl, with great deal of contempt in her to "Well, that is enough to hear of hi I should think he would avoid wh people. The specimens we have se of that class would make you asham you were human," she said, turning Rachel and Stuart. "I know papa sa there are exceptions, but papa is i aginative. This one looks rather pr perous, and several degrees clea than I've seen them, but—"

"Don't say anything against him til you know you have reason, Fre suggested Rachel. "He did me a fav once, and I can't allow people to t about him on hearsay. I think he worse than few and better than ma and I have known him over a year."

"Mum is the word," said F promptly, proceeding to gag hers with two little fists; but the exp ment was a failure.

"If she takes him under her wi papa, his social success is an assur fact, even if he refuses to open mouth. May I expect to be presen to his interesting family tomorr Rachel?"

Rachel only laughed, and asked Major some questions about the ports from the northeast; the attit of the Blackfeet, and the snowfall the mountains.

"The Blackfeet are all right no he replied, "and the snows in the h to the east are very heavy—that what caused our scout's delay. south of us I hear they are not nea so bad, for a wonder, and am glad hear it, as I myself may need to m a trip down to Fort Owens."

"Why, papa," broke in his c manding officer, "you are not goin turn scout or runner, are you, leave me behind? I won't stay!"

"You will obey orders, as a sol should," answered her father. If I instead of sending, it will be beca it is necessary, and you will have bow to necessity, and wait until I get back."

"And we've got to thank Mr. Squ man for that, too!" burst out F wrathfully. "You never thought of ing until he came; oh, I know it hate him!"

"He would be heart-broken if knew it," observed her father dr "By the way, Miss Rachel, do know if there is room in the ra stables for another horse?"

"They can make room, if it is necessary. Why?"

"Genesee's mare is used up e worse than her master by the lo hard journey he has made. Our st that is in good condition can st our accommodations all right, but fellow seemed miserable to think poor beast had not quarters equa his own. He is such a queer fel about asking a favor that I thought

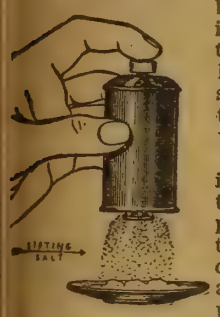
"And the thought does you cred said the girl with a suspicious m ture in her eyes. "Poor, brave witza! I could not sleep very sou myself if I knew she was not cared and I know just how he feels. D say anything about it to him, b will have my cousin come over and her, before evening."

"You are a trump, Miss Rach

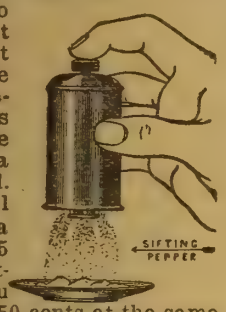
NEW, SANITARY SALT and PEPPER SHAKELESS SIFTERS

Moisture-Proof
Dirt-Proof
Germ-Proof

MADE of pure aluminum, satin finished with four narrow and two wide polished bands, and highly polished tops. These unusual salt and pepper sifters are very rich and attractive in appearance and look like silver. They are light in weight, yet so durable as to be practically indestructible. The illustration shows how the sifter works.



To operate it is necessary to simply press the button in and out. As they are moisture proof the salt will never be affected by damp atmosphere and the necessity for tiresome shaking is entirely eliminated. No more damp salt or pepper without flavor or strength. Owing to their ingenious construction, the contents cannot spill. They are so constructed as to keep out germs, dust and dirt, the contents being always clean. Price 50 cents a pair, postpaid.



We will send you a pair for 25 cents, postpaid, if you will send us 50 cents at the same time for a yearly subscription to The Housewife.

THE HOUSEWIFE.

In it you have a magazine containing the best literary and artistic efforts of the foremost writers and illustrators of the day. Anna Steese Richardson, organizer of the Better Babies Movement, will write for The Housewife a series of articles on the professions and businesses open to the girl starting out in life. Mabel Potter Daggett will write strong articles for The Housewife on matters of world-wide interest. Helen Christine Bennett will write articles and aim to show the young wife how to start housekeeping right. Lilian Dynevor Rice, who is known to hundreds of thousands all over the United States, will continue as Department Editor of The Housewife. The departments which she will supervise will embrace practical, seasonable cookery, embroidery, crocheting and needlework of all kinds, gardening and helpful household hints. Harold Vincent Milligan, organist and well-known writer on musical subjects, will contribute articles to The Housewife on music for the home. Among the prominent writers of fiction we have scheduled for the year is Holworthy Hall, one of America's brightest young authors. His first serial "The Frying Pan" commences in the November issue of The Housewife and is interestingly and attractively illustrated by Walter Tittle. Taken all in all, The Housewife for the year 1917 will be the best magazine published at 50 cents a year.

Or, you may obtain a pair for 25 cents, by sending us an order for any one of the following combinations of magazines, if your order is received before January 1, 1917.

THE HOUSEWIFE 30 Irving Place NEW YORK

said the Major emphatically; "and if you can arrange it, I know you will lift a load off Genesee's mind. I'll wager he is out there in the shed with her at this moment, instead of beside a comfortable fire; and this camp owes him too much, if it only knew it, to keep from him any comforts for either himself or that plucky bit of horseflesh."

Then the trio, under guard of the Lieutenant, paid some other calls along the avenue—were offered more dinners, if they would remain, than they could have eaten in a week; but in all their visits they saw nothing more of the scout. Rachel spoke of his return to one of the men, and received the answer that they reckoned he was putting in most of his time out in the shed tying blankets off his bunk around that mare of his.

"Poor Mowitza! she was so beautiful," said the girl, with a memory of the silken coat and wise eyes. "I should not like to see her looking badly."

"Do you know," said Stuart to her, "that when I heard you speak of Mowitza and her beauty and bravery, I never imagined you meant a four-footed animal?"

"What, then?"

"Well, I am afraid it was a nymph of the dusky tribe—a woman."

"Naturally!" was the one ironical and impatient word he received as answer, and scarcely noted.

He was talking with the others on multitudinous subjects, laughing, and trying to appear interested in jests that he scarcely heard, and all the while the hand he had offered to Genesee clenched and opened nervously in his seal glove.

Rachel watched him closely, for her instincts had anticipated something unusual from that meeting; the actual had altered all her preconceived fancies. More strong than ever was her conviction that those two were not strangers; but from Stuart's face or manner she could learn nothing. He was a much better actor than Genesee.

They did not see any more of him, yet he saw them; for from the shed, off several rods from the avenue, the trail to Hardy's ranch was in plain sight half its length. And the party, augmented by Lieutenant Murray, galloped past in all ignorance of moody eyes watching them from the side of a blanketed horse.

Out a half mile, two of the riders halted a moment, while the others dashed on. The horses of those two moved close—close together. The arms of the man reached over to the woman, who leaned toward him. At that distance it looked like an embrace, though he was really but tying a loose scarf, and then they moved apart and went on over the snow after their comrades. A brutal oath burst from the lips of the man she had said was worse than few.

"If it is—I'll kill him this time! I'll kill him!"

CHAPTER IX.

After Ten Years.

MAJOR DREYER left the next day, with a scout and small detachment, with the idea of making the journey to Fort Owens and back in two weeks, as matters were to be discussed requiring prompt action and personal influence.

Jack Genesee was left behind—an independent, unenlisted adjunct to the camp, and holding a more anomalous position there than Major Dreyer dreamed of; for none of the suspicious current of the scout ever penetrated to his tent—the only one in the company who was ignorant of them.

"Captain Holt commands, Genesee," he had said before taking leave; "but on you I depend chiefly in negotiations with the reds, should there be any before I get back, for I believe you would rather save lives on both sides than win a victory through extermination of the hostiles. We need more men with those opinions; so, remember, I trust you."

The words had been uttered in the presence of others, and strengthened the suspicions of the camp that Genesee had been playing some crooked game. None knew the reason for that hastily-decided trip of the Major's, though they all agreed that that "dirty skunk of a squaw man" was posted. Prophecies were rife to the effect that more than likely he was playing into the hands of the hostiles by sending away the Major and as many men as possible on some wild-goose chase; and the decision arrived at was that observation of his movements was a matter of policy and readiness to meet an attack from the hills a probable necessity.

He saw it—had seen it from the day of his arrival—and he kept pretty much out of the way of all except Kalitan; for in watching Genesee they found they would have to include his runner, who was never willingly far away.

During the first few days their watching was an easy matter, for the suspected individual appeared well content to hug the camp, only making daily visits to Hardy's stable, generally in the evening; but to enter the house was something he avoided.

"No," he said, in answer to Hardy's invitation; "I reckon I'm more at home with the horses than with your new company. I'll drop in sometime after the Kootenai valley is clear of uniforms."

"My wife told me to ask you," said Hardy; "and when you feel like coming, you'll find the door open."

"Thank you, Hardy; but I reckon not—not for a while yet."

"I'd like you to get acquainted with Stuart," added the unsuspicious ranchman. "He is a splendid fellow, and has become interested in this part of the country."

"Oh, he has?"

"Yes," and Hardy settled himself, Mexican fashion, to a seat on his heels. "You see he's a writer, a novelist, and I guess he's going to write up this territory. Anyway, this is the second trip he has made. You could give him more points than any man I know."

"Yes—I might."

"Rachel has given him all the knowledge she has about the country—the Indians, and all that—but she owns that all she learned she got from you; so, if you had a mind to be more sociable, Genesee—"

The other arose to his feet.

"Obliged to you, Hardy," he said; and only the addition of the name saved it from curtness. "Some day, perhaps, when things are slack; I have no time now."

(To be continued.)

The AMERICAN MESSENGER

IS THE BEST Illustrated Religious Monthly Published In This Country at the Low Subscription Price of Only 50 Cents a Year.

AMONG its editorial contributors may be mentioned such popular religious writers as Rev. David James Burrell, D. D. LL. D., Pastor of the Marble Collegiate Church of New York City; Rev. Charles Carroll Albertson, D. D., Pastor of the Lafayette Avenue Presbyterian Church of Brooklyn, N. Y.; Rev. J. Wilbur Chapman, D. D., the famous evangelist; Rev. Edgar Whitaker Work, D. D., Pastor of the Fourth Presbyterian Church of New York City, and Rev. George Ernest Merriam.

It is especially valuable to Christian Endeavor and other Young People's Societies. Each issue contains stories of fascinating interest, suitable for home reading and other articles relating to the family life. The American Messenger endeavors to present a comprehensive view of the progress of the Kingdom, both at home and abroad; to tell of the forward movements that are being initiated for the uplift of humanity and the betterment of mankind; to call attention to those phases of Christian work and thought that are of unusual interest; to record the manifold activities of the Christian Church; and to spread abroad the cardinal teachings of Jesus Christ, as revealed in the Gospel which He proclaimed as the message of God.

The paper is interdenominational and admirably suited for every home. All those who subscribe now to the American Messenger for 1917 at fifty cents will receive the paper until January 1, 1918. New subscribers will thus receive the issues for October, November, and December, 1916, free of cost, if they subscribe at once. If you do not know the paper, send for a free sample copy.

COMING EVENTS.

Winter Course Wisconsin Dairy School, Madison, Wis., November 8th to February 1st.

International Live Stock Exposition, Chicago, Ill., December 2d to 9th.

Wisconsin Dairymen's Convention, Waupaca, Wis., December 5th to 7th.

Wisconsin Buttermakers' Association, Sparta, Wis., December 5th to 7th.

Wisconsin Beekeepers' Association, Madison, December 7th and 8th.

Wisconsin State Horticultural Society, at Madison, December 12th, 13th and 14th.

Wisconsin Poultry Association Show, at Madison, January 1st to 5th.

Wisconsin Cheesemakers' Association, at Fond du Lac, January 10th to 12th.

Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

The photograph shown herewith is that of a corn display in the lobby of the First National Bank, Grand Rapids, Wisconsin. This picture was sent to The Wisconsin Farmer by Mr. Earle Pease, vice president of the bank and a gentleman who has been keenly interested in agricultural development in his own community and in the state at large. This is a splendid corn display, considering the latitude of Grand Rapids and which is ordinarily considered at the north end

CORN EXHIBIT IN FIRST NATIONAL BANK BUILDING, GRAND RAPI WIS., NOVEMBER, 1916.

of the corn belt. This corn was raised on both heavy and light soils and the display was made without any offer of premiums or cash prizes. The exhibit was gotten up purely for the purpose of creating greater interest in pure-bred corn in Wood county. It is a find illustration of the splendid co-operation which exists in this section between farmers and bankers.

W. D. Morgan, of Rusk county, has just purchased a caterpillar tractor ditching machine which he expects to operate on the Deer Trail drainage project in that county this winter.

Quite a notable farm sale was consummated recently in Green county where 171 acres situated near the city of Monroe was sold by E. Van South to Herman Gempeler at $300 per acre, or a total of $51,300. Mr. Gempeler also purchased the live stock and other personal property on this farm, paying an additional $16,000 for the same. This sale sets a new record for land values in Green county and indicates the possibilities of big values of good dairy farms.

Horse breeders of Grant county, co-operating with local business men and the Wisconsin Live Stock Breeders' Association, will hold their first annual colt show on Saturday, November 25th, at Bloomington. The local committee is made up of M. F. Woodhouse, Arthur McKeavitt and Thomas McNamara. W. L. Houser, of Mondovi, will act as judge. There will be two sections, one for grade foals and one for get of sire with liberal cash prizes. In section one comes colt and filly foal and in section two classes for groups of three foals each in Percherons, Belgians, Clydesdales Shires. Grant county is an impor horse breeding county and a big s ing is expected.

The annual meeting of the Wis sin Progressive Poultry and Pet S Association, of Monroe county, held recently in Sparta and the lowing officers elected: M. A. lick, president; J. C. Johnson, president; J. L. Herbst, secret The next show will be held in Sp January 10-16, 1917.

The annual convention of the beekeepers' association will be at the capital, Madison, on Decen 7th-8th. The growth of the indu during the last year has been enc aging and technical problems of rearing and disease prevention wil discussed. N. F. France, of Platt is president and Gus Dittmer, of gusta, is secretary.

Manitowoc county farmers rec witnessed a novel sight at the H Rideker farm in the village of M cot. A complete barn, 44x75 feet, erected in one day. Work on

structure was begun early in the m ing and there were about seventy on the job. By night the building finished and a dance was held to brate the event. The barn was ere on a foundation of one which burned recently and is almost an act duplicate. The building was ned and all material on the groun advance. Even the doors were in their places before the crew Experienced carpenters cut the ber, planks and boards and sup tended the work and the barn is as good as it would have been were built in the regular way.

Kewaunee county farmers are terested in two pure-bred Gu seys which were recently bo at Waukesha. These animals been placed with the George F. nik and Jacob J. Blahnik herds. two cows are Beauty of Linden and Selma of Pinehurst II, the for being purchased from William Ne Pelouze, of Oconomowoc, and the ter from F. E. Fox, of Wauke There are not nearly so many bred animals in Kewaunee count there should be. The leaders are to see these animals representi splendid breed brought to the co and they expect this to be an imp to the pure-bred stock business. years ago Waukesha county had a small handful of pure-bred bree and now there are 3,000 pure Guernseys in the county, and prob a larger number of pure-bred steins. The Jerseys are also be ing popular in Waukesha county, these facts show that the boo which has been done for the Guer breed has helped rather than hind the progress of other good breeds in the county.

Inter-County Holstein Sale.

The Holstein sale held by the Intercounty Holstein Breeders' Association, at Watertown, Wis., was a real sale. as is shown by the average obtained. It was by far the best Holstein sale held in Wisconsin this season. Individually the animals were mostly of high quality, although many of them were "cold blooded" as to pedigrees. It demonstrated, however, that the buyers have learned that the best bred cow in the world if a non breeder or a poor individual is the most expensive. This association would not accept culls for their sale and every animal was guaranteed to be straight and right. They even gave a sixty-day retest guarantee, one that was a real protection to the buyer. Because of this the buyers were not afraid to pay a reasonable price, as they felt their purchases were on a business basis and not a gamble on which "they took their own chances" as has been the attitude of some sales managers in the past. There were six exceptionally good bulls in the sale and this sale demonstrated that good bulls are in demand. Ted Lehman & Darcey purchased the thirty-pound bull consigned by E. C. Brill for $775. One consigned by Ed Gibbs, Fox Lake, brought $450. One consigned by Seifeld brought $600. The thirty-pound bull consigned by Goldthorp brought $400. Fred Albrecht's aged bull sold for $380 and one other bull sold for $500. The majority of the animals were purchased by Wisconsin buyers, a few going to Illinois, Minnesota and Michigan. Plans are already on foot for the spring sale and the consignors have agreed to put in some very high-class animals. If their plans materialize as they now promise, it will be one of the best sales of high-class animals ever pulled off in the state.

FARMERS! Your name and address printed on 125 envelopes and 125 note heads, $1. News Co., Stockton, Ill.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. Place your name and address to it, then, to know its cost, count the number of words. The rate is six cents per word, each insertion. For instance, if your advertisement, including the address, has 15 words, one insertion would cost 90 cents, which is one cent for every thousand copies printed. Note the low cost, and read what small advertisements in The Wisconsin Farmer have done for others

One **Wisconsin Farmer** seed corn advertiser says: "We are getting a nice response to our advertising. We will come back with a larger advertisement." Another says: "**The Wisconsin Farmer** has done good work helping me to sell lots of stock." And another writes: "Please discontinue my advertisement in **The Wisconsin Farmer.** I am getting pretty well sold out for the present."

These small advertisements did not have the advantage of the classified headings now available—under which your advertisement would appear.

Any "Wanted," "For Sale," or "To Exchange" advertisement will receive prompt attention and insertion will be made in first issue possible.

THE WISCONSIN FARMER — MADISON, WISCONSIN

FARM LANDS.

40 ACRES, house and barn, five acres cleared, clay loam soil, main road, three miles from town, on mail route, telephone line. $25.00 per acre. $200 down, balance to suit. More good land adjoining this if you want more. Henry Wilson, Ladysmith, Wis.

FORTY or eighty acres with fair buildings, good clay soil, no waste land, close to town, $25 per acre; $100 cash, balance long time. Frank M. Doyle, Ladysmith, Wisconsin.

FOR SALE—Fifty-four acres, good dairy farm, three miles out on main road. Easy terms. Owner, Box 545, Evansville, Wisconsin.

HAVE YOU AN OLD NEIGHBOUR FARMING IN MANITOBA

Perhaps you will find a letter from him in the attractive little book, "FARMING IN MANITOBA," published by the Provincial Government of Manitoba. Or, even if you have no old neighbour who is making good in the Banner Province of the Canadian West, you will find that booklet of vast, practical interest to you. IT HAS A MESSAGE FOR YOU in a collection of plain, unvarnished letters from successful farmers in Manitoba, who came from the States and different parts of the world to the country where land is cheap as well as good. Grain Growing, Stock Raising, Mixed Farming—they all yield a bigger profit in Manitoba than where you now reside.

SEND FOR THIS FREE BOOKLET

It has a message also for your wife. Manitoba has MORE to offer you than any other part of the world. We are not selling lands—but distributing information only.

160 ACRE FARMS IN WESTERN CANADA FREE

Canadian Farmers Profit From Wheat

The war's devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and wheat near $2 a bushel offers great profits to the farmer. Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops.

You can get a Homestead of 160 acres FREE and other lands at remarkably low prices. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to acre. Wonderful crops also of **Oats, Barley and Flax.**

Mixed farming as profitable an industry as grain raising. The excellent grasses full of nutrition are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent.

Military service is not compulsory in Canada, but there is an extra demand for farm labor to replace the many young men who have volunteered for the war. The Government is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or

Geo. A. Hall,
123 2d St., Milwaukee, Wis. Canadian Gov't Agt.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Walcowis Farms' Holsteins.

WE always enjoy a visit to the Walcowis Farms owned by Nathan Dickenson & Son, Lake Geneva, Wis., for there is always something new and interesting being developed in the way of Holstein records. Boyd, the son, has proven himself to be a careful and discriminating judge of good cattle, and the winnings of this herd at the big fairs and dairy shows places it as one of the foremost in the state. One of the cows won grand champion honors at the Wisconsin State Fair this year and the young stock were prominent winners. I have asked Boyd to make out a list of the winnings of the herd, and I hope to be able to publish this in an early issue. He is not satisfied, however, with merely show ring records, but is continually doing official and semiofficial testing. They already have over twenty A. R. O. cows and eight with yearly records. Several others will finsh their yearly records in the near future. Among the yearly record cows is Lady Walcowis De Kol that at two years and thirteen days gave 17,110 pounds milk and made 643.91 pounds butter. The senior herd sire is Cornucopia Pontiac Johanna, a 24.95-pound son of the great bull, King of the Pontiacs, that has 192 A. R. O. daughters, two with records over forty pounds, fifteen daughters with records over thirty pounds. Cornucopia Johanna Pontiac himself has seventy A. R. O. daughters, three with records from twenty-three to 27.71 pounds butter in seven days. At the present time they are offering a fine young bull sired by Cornucopia Johanna Pontiac. His dam is a sixteen-pound two-year-old daughter of the thirty-three-pound bull, Sir Pietertje Lyons Hengerveld. This young bull is very well grown for his age, is long bodied and as straight as a line. His pedigree is a "cracking" good one. Those of our readers who want a bull of good breeding and outstanding as an individual should send for the pedigree and a picture of this young animal.—Adv.

Pinehurst Dairy Holsteins.

WHEN visiting the Pinehurst Dairy, Sheboygan Falls, last week we, of course, looked over the herd and paid especial notice to the young stock. They give their calves extra good care on this farm and grow them out in good shape. They are kept in a special barn that is a model of sanitation and convenience. We saw one young bull that impressed us particularly, and we persuaded Mr. Crampton, the manager, to run an advertisement on him in The Wisconsin Farmer. He is well grown, well marked and of good type. His sire is a 28.46-pound son of the thirty-seven-pound bull, King Segis De Kol Korndyke, that is full brother to King Segis Pontiac. In his veins is combined the blood of Hengerveld De Kol, King Segis, Pontiac Korndyke and Sadie Vale Concordia. The dam of the young bull offered for sale is Pinehurst Grace, that made 23.13 pounds butter in seven days. She is a daughter of Sir Piebe Johanna Sarcastic, the sire of Pinehurst Piebe, that as a three year old made 28.13 pounds butter in seven days. Her dam has three A. R. O. daughters showing that she comes rightly by her heavy production ability. It will be seen that this young bull has inherited heavy producing blood from both his sire and dam. This combined with his good individuality makes him a very desirable animal. Send for an extended pedigree and picture of this bull and when writing will you kindly mention that you saw this advertisement in The Wisconsin Farmer. See page 24.—Adv.

An Announcement.

WE have just had a letter from E. J. Wilson, of Renville, Minn., advising that he has decided to close out his Durocs on January 4th. This comes as quite a surprise to many, for Mr. Wilson has one of the good herds of the state that represents a considerable outlay of cash. E. J. is field man for the Duroc Bulletin in Minnesota, and, as it is necessary for him to be away from home practically all of the time, he has decided to rent his farm and incidentally close out his good herd of registered Duroc Jerseys. Seventy head of sows and gilts will make up this offering and some of the best sows owned in the state of Minnesota will go in this sale. There will be forty sows a year old last fall, all sired by his noted Chief's Col. 40th, a winner of first at Minnesota, Wisconsin, Michigan and Peoria, Ill. He is sired by the great Chief's Col. and his dam is Helen Duchess by Ohio Chief. This herd contains some of the best breeding known. You should get your name on the list for a catalog at once. Watch this paper for further announcement pertaining to this offering. Address E. J. Wilson, Renville, Minn., and please mention The Wisconsin Farmer.—Adv.

Jamison & Son's Guernseys.

IF you want some choice registered Guernsey cows write to W. G. Jamison & Son, Appleton, Wis. They are offering two high-class individuals, one already in the advance registry. They are also offering several choice young bulls sired by Governor Paget and most of them from advance registry dams. You not only buy a good bull when you buy of these breeders but you buy one that will grow into money, as they are continually doing A. R. testing which adds value to every animal. Send for pedigrees and prices on the animals offered for sale. See page 24.—Adv.

Sprain & Sons Enjoy Good Trade.

WE have just had a letter from Geo. D. Sprain & Sons, West Salem, Wis., advising that they are sold out of Duroc Jersey boars. They have enjoyed an excellent mail order business, nineteen out of twenty-four boars were sold to new costumers, and at very satisfactory prices—not the $15 and $20 kind, the Messrs. Sprain don't cater to that class of buyers. There are three good boars in this herd that we believe will be heard from. Grand Model 21st is a yearling son of the noted champion, Grand Model. Royal Top Col. is a recent addition to this herd and one of the best yearling boars in the state. He is sired by Put's Top Col. he by the noted Morton's Top Col. His dam is by Ohio Chief's Advance. There is aspring boar in this herd that we consider a great prospect. He is sired by the champion, Prince Illustrator, and out of a Col. Gano dam. With the care he will receive at the hands of Fred Sprain we predict that he will make a creditable showing next year. Three of the best sows in the state are owned by this firm, two of them are by Lee's Defender out of Marion's Wonder dams and one is sired by King the Col. These sows will weigh 700 pounds each and each sow raised a fine litter last spring. Sprain and Hyzer were dated for a bred sow sale this winter, but inasmuch as Mr. Hyzer is going to move to Iowa this sale has been called off, Hyzer having sold his Durocs November 20th and Messrs. Sprain cannot hold a sale without drawing too heavily on their breeding herd. A limited number of spring gilts are being offered at this time. If you are interested write and mention The Wisconsin Farmer. See page 23.—Adv.

Robers' Holsteins.

REGISTERED Holstein heifers sired by the 31.17-pound bull, Sir Wayne Johanna De Kol, are advertised for sale on page 24 by Lawrence Robers, Lyons, Wis. These heifers are of good type, well grown and from heavy producing dams. Send for pedigree and description.—Adv.

Wincklers' Holsteins.

THE two bulls offered for sale on page 24 by B. F. Winckler & Sons, Medina, Wis., are right good individuals and worthy of the attention of our readers. They are both more white than black, are well grown and of good type. They were sired by the 27.56-pound bull, Sir Johanna De Colantha De Kol and out of daughters of the twenty-eight-pound bull, Oakhurst Milk and Butter King, a son of the $10,000 The Milk and Butter King. Send for the pedigrees and further description of these two bulls. When writing kindly mention The Wisconsin Farmer.—Adv.

John Swenson and E. J.'s Crimson Wonder.

EASTERN Minnesota and Wisconsin needs more and better Durocs and for those that appreciate breeding and individuality, we wish to say that the best sales to be made in the Northwest this winter will be advertised in The Wisconsin Farmer. Some time ago a representative of this paper visited the leading breeders in Minnesota that expect to make sow sales this winter. Some of the herds did not come up to our expectation and their business was not solicited, but we will say right here that the "cream" of the Duroc Jersey bred sow sales to be held in that state will be advertised in The Wisconsin Farmer. One of the best breeders and caretakers in the state of Minnesota is John Swenson, of Willmar. When he started in with the Durocs he bought sale toppers, he has taken care of the produce and today he has without any doubt one of the very best herds in the Northwest. Big Wonder the 1913 Iowa champion for which $1,500 was paid helped put Mr. Swenson on the map. Mr. Swenson kept up the reputation of his herd by sending his herd boar, E. J.'s Crimson Wonder to the Minnesota State Fair this year where he was awarded grand championship. He is one of the best boars that ever won a purple ribbon at this fair. A great assortment of breeding will be offered the public and most of the offering will be bred to a grand champion boar. This is one sale that you should attend. Send in your name now so you will be sure to get the catalog. Please mention this paper when writing.—Adv.

Cortte's Berkshires.

YOU Berkshire breeders should visit the herd of A. P. Cortte, Lomira, Wis., and see his sows and spring pigs. I believe you will agree with me that they are good ones. The spring pigs were sired by Pabst Rivaleer 3d and King of Rival's. They are of good type, well grown and are good prospects for next fall's show ring. Go look them over or write him for description, breeding and prices.—Adv.

Lindauer's Holsteins.

WHEN you want a right good herd sire you can find one to fill your needs in the herd of L. Lindauer, Kaukauna. He is now advertising a yearling bull sired by King Segis Pontiac Polkadot, a full brother in blood to the $50,000 Arfman-Lawson bull, Segis Pontiac Alcartra. Send pedigree of this bull. See p... Adv.

Results Better Than Ever.

WISCONSIN breeders who advertise in The Wisconsin Farmer once generally come back, year after year, because they find that advertisements in The Wisconsin Farmer are a paying investment. H. B. Drake, Beaver Dam, Wisconsin, has advertised in The Wisconsin Farmer for twenty-five years, and he says this year that results are better than ever. Here's his letter:

I have been an advertiser in The Wisconsin Farmer off and on for the past twenty-five years and am pleased to state that the results of my advertising are better today than they have ever been before.

If you have surplus stock for sale an advertisement in The Wisconsin Farmer may mean many extra dollars in your pocket because of the increased sales which it may bring to you. Some Wisconsin breeders, readers of The Wisconsin Farmer, are no doubt wanting your stock. Tell them about it. Send the copy for your advertisement today. It will go to more than 90,000 possible buyers.

Royal King.

GOOD boar or a good bull will put a breeder "on the map" quicker an anything else. When the John- n Bros., of Winnebago, Minn., paid 650 for the Duroc Jersey boar, Royal ng, no doubt many thought they re crazy, but this fact alone has ad- rtised the Johnson Bros., herd as thing else could have done. Royal ng is a wonderful boar. Now as a ee year old he is very smooth, has high, arched back a good head and and with the best of feet and bone: ce the Omaha show some jealous eders have been trying to pick the of the great boar, Orion Cherry ag, to pieces. It may be true that champion boar at Omaha did not ve the best feet, but that does not essarily mean that all the sons of ion Cherry King have poor feet. yal King has as good feet as a boar r stood on, and his get are right on their toes. E. H. Parker & Sons, nesville, Wis., have a son of the aha champion, Orion Cherry King and the best part of this boar is his d legs and feet—they are just about fect. We have recently seen seven ghters of Orion Cherry King and ry one has good feet, so don't be led by reading the advertisements some breeders that "knock" this line breeding for personal gain. On uary 9th, Johnson Bros. will sell ty-five of the best Duroc Jersey sows t ever entered a sale ring. This l be a sale that Wisconsin breeders well afford to attend. The sale ertisement will appear in The Wis- sin Farmer in due time, but make ns now to attend this sale.—Adv.

Chief Invincible.

HEN talking about the great boars of the breed, Chief Invincible ed by F. M. Washburn, Lake Crys- Minn., must be considered. The and at the present time is for size quality and Chief Invincible has t. We feel safe in saying that he ne of the five largest boars of the oc Jersey breed in America. To ribe this boar so that our readers ld appreciate him would almost be ssible. He has all the qualifica- s that are needed to make a great . We recently spent the day with Washburn and looked over one of greatest herds in the country. A made up of the most fashionable ding and individuality they are best that money could buy. Chief ncible has made good in this herd those that attend the winter sale see some great gilts by this 1,000- d boar. There will be daughters of Cherry King, Pathfinder, Educa- Chief Col. 40th, Critic D., Golden l 21st, Col. Wonder, King the King of Col. Again, Chief Invin- , etc. No breeder will put up a r offering bred to a better boar. sale will take place January 8th make your plans now to attend great sale of Durocs. The adver- ment for this sale will appear in time—watch for it, it will contain mation valuable to all lovers of uroc breed.—Adv.

The Steele County Breeders.

RE are several Duroc Jersey eders located around Owatonna, , that are live wires. They have ed an association and expect to the breed in their vicinity. On ary 3d, they will hold their second al bred sow sale. Fifty head have picked from five herds and by ng the ten tops from five herds one d naturally expect to find a supe- offering and those that attend this will not be disappointed. These ers have some excellent boars in herds. R. E. Morrison has a son of the noted Big Col. Oscar egaard has a son of King the Col., is far above the average. And in arple herd we found a son of the is champion, Tommy Doyle. This will be advertised in The Wiscon- armer and it will be one worth at- ng.—Adv.

A Good Guernsey Bull.

yearling Guernsey bull adver- sed for sale on page 24 by W. J. Ft. Atkinson, Wis., is one you to investigate if you are in the et for a herd header. He is ready ard service being born September 5. His dam Agnes of Oak Grove, 445 pounds of fat and is a daugh- f the great bull, Starlight's Ex- r. His sire is Miss Luctilius Hom- whose four nearest dams average 656 pounds of butter fat in a year and his sire, Lang Water Hombro sold for $1,000. It will be recognized that this is an exceptionally well-bred bull. Mr. Heid also has several young bulls ranging from two to seven months of age. Send for extended pedigrees and prices on these animals.—Adv.

International Sort-horn Sale.

FIFTY-FIVE Short-horns will be sold Thursday, December 7th, during the week of the International Live Stock Exposition at Chicago under the auspices of the American Short-horn Breeders' Association. A very strong consignment of bulls and females is included, coming from herds of America's best breeders and showmen. These are animals which have been carried in the show herds of the consignors during the past season and will be shown at the International. A notable offering from start to finish and a splendid opportunity to strengthen your Short-horn herd is here presented. Catalogs are ready. Apply to the American Short-horn Breeders' Association, 13 Dexter Park Avenue, Chicago.—Adv.

Schley Bros.' Holsteins.

WHEN you can get as good a young bull for the price as those advertised for sale on page 24 by Schley Bros., Waukesha, Wis., don't pass it up. These bulls were sired by the thirty-pound bull, Pabst King Pontiac Lad, whose three nearest dams average over thirty pounds butter in seven days. The dam of one of the bulls offered for sale made twenty pounds butter in seven days. These bulls are both well marked being more white than black, are well grown and of good type. Send for extended pedigrees.—Adv.

Van's Wonder Sold.

WE have just been advised that F. S. Vanderhyde, West Concord, Minn., has sold to the Cerro Gordo Farms, Mason City, Iowa, his noted Duroc Jersey boar, Van's Wonder. This boar was grand champion at the Minnesota State Fair, 1915, and has proven to be an excellent sire. The Cerro Gordo Farms are fortunate in securing such a boar to head their herds. Mr. Vanderhyde will hold a bred sow sale January 2d and same will be advertised in this publication. Watch for later announcements, as this will be one of the good sales to be held in Minnesota this winter.—Adv.

McClurgs' Duroc Jerseys.

BIG, stretchy, Duroc Jersey boars, of March and April farrow are being offered by McClurg Bros., Viroqua, Wis. They have fourteen spring boars on hand that are good, at least they are good enough to ship on approval, which certainly is fair enough and they are well bred. Some are by Prince Defender, one of the best Duroc Jersey boars in the state of Wisconsin. A few are by Royal King 4th, a big, stretchy son of the noted $2,650 boar, Royal King. Lee's Lefender is the sire of one good litter of March boars. We know that the McClurg Bros., will give you a good deal, they are energetic and wish to make satisfied customers. Besides having the boar recorded for you they will give you a year's subscription to the breed's official paper, the Duroc Bulletin. Write this firm your wants and in so doing kindly mention The Wisconsin Farmer. See this page.—Adv.

Rhoda's Holsteins.

WHEN you need a Holstein herd sire we advise you to write to W. H. S. Rhoda, Watertown, Wis. Will is one of the best judges of Holsteins we know of and he can supply you with a herd bull of which you will be proud. Write him whenever you want Holsteins of any description. Grades or pur breds. You can't beat the combination of breeding and individuality. He is out of a 23.05-pound four-year-old daughter of Sir Clyde, that has forty-five A. R. O. daughters, four with records over thirty pounds butter in seven days. His sire is Beauty Pietertje Prince, that is out of a daughter of Sir Ormsby Hengerveld De Kol, the sire of Pietertje Maid Ormsby. These are proven lines of breeding that cannot be excelled. Send for the pedigree of this bull. See page 24.—Adv.

Phillipi's Sheep.

THE flocks of sheep owned by Geo. Phillipi, Bear Creek, Wis., are among the foremost in the state. Mr. Phillipi is a sheep breeder exclusively and keeps ten breeds. He has the only pair of Persian sheep in Wisconsin, having purchased these at the San Francisco Exposition at a big price. These are the sheep whose lamb produce the very expensive Persian lamb fur. The winnings of Mr. Phillipi's sheep at the leading fairs in Wisconsin are evidence of the high quality and type of the sheep he breeds. When in the market for a ram or a few ewes write him. See advertisement on page 23.—Adv.

Lucia's Guernseys.

SOME fine registered Guernsey heifers and young cows are advertised for sale on page 24 by Geo. Lucia, Green Bay, Wis. The heifers are yearlings and two year olds, while the cows range from two to five years old. They are straight and right and our readers are advised to investigate them if in the market for Guernsey females. Mr. Lucia is also offering two yearling bulls ready for service, both are sired by a son of Imp. Golden Hero of L'Etinery, whose dam was a 526-pound daughter of Gov. of the Chene. Both of these bulls are from imported cows, one of which has already completed a creditable advance registry record. Send for extended pedigree and prices.—Adv.

How many of our readers will see this and then write and tell us how many different kinds of food products they now buy in packages which they used to buy in bulk, or did not buy at all?

We would like to know. If you will take the time to write, it would please us.

SHORT-HORN CATTLE.

WE WILL SELL YOUNG SHORT-HORN COWS

TO freshen in December. Several roans and reds, choice individuals and in calf to a Scotch bull. Write or come—they'll not disappoint you.

WILLIAMS BROS. **BANGOR, WISCONSIN**

USE A SHORT-HORN BULL

ARE you raising beef? A Short-horn bull will give you more scale and bone and more pounds of flesh for a given amount of feed than any other breed. Are you a dairyman? A Short-horn bull will not reduce your milk supply and he will get you calves that will be quickly salable at a much higher price than you can get from a dairy bred bull. Are you a farmer? The Short-horn is the ideal for your purpose, because it is adapted to all conditions, of quiet temperament, takes on flesh readily, and yields a liberal flow of milk. The Short-horn always works improvement.

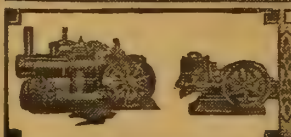
FARM MECHANICS



Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Automatic Spark Advance.

How many degrees past dead center should the spark be advanced for each hundred revolutions per minute? Do you know of any automobile successfully using the Atwater-Kent system, or any other system of automatic spark advance?

Answer.—The general practice is about one-half a degree for each 100 revolutions per minute. The design of the motor has considerable to do with it. The Atwater-Kent system is operating successfully on several makes of automobiles.

Repairing a Blow Torch.

Will you please give directions for making a burner and spraying nozzle for a kerosene blow torch? I have nearly all the parts of a blow torch and I want to make one for thawing out frozen water pumps. Is a kerosene torch the same as a gasoline torch?

Answer.—It is not practical to make a blow torch burner without special tools, nor is it practical to repair a worn-out burner. The needle valve seat wears until it becomes too large. The best thing to do then is to send to the factory for a new burner. Kerosene is seldom used in blow torches, as it is too hard to vaporize.

Battery Ignition Trouble.

I have a Cadillac 30 automobile. It runs all right on magneto, but only gives a faint spark on battery. The controlling relay buzzes strongly. What is the trouble?

Answer.—The trouble is probably in the condenser of the spark coil. However, before changing the condenser, make sure that there are no short circuits in the wiring, that all your battery connections are tight, and that your batteries are not worn out. Also make sure that the battery connection to the timer has no loose ends sticking out from under the binding post. If one wire from the frayed end of the cable touches the timer case the current will be short circuited.

Dirt in Gasoline.

I have a Mitchell car that is equipped with a Stromberg carburetor. It floods badly sometimes, while again it may not flood at all. I gave the needle valve a good grinding, but this did not improve it. I then bought a new needle and valve, but I still have the same trouble. Sometimes the car will stop. There may be plenty of gasoline in the tank, but the carburetor will be dry. What is the trouble?

Answer.—Your trouble is probably not with your carburetor, but with your gasoline. There must be some particles of lint or dirt in it that clog the small gasoline passages of the carburetor or get under the float valve and keep it from seating. This causes the flooding. You should clean your carburetor, gasoline pipes and gasoline tank thoroughly. When filling the tank strain the gasoline through a piece of chamois skin. If this does not remedy the trouble the float valve of the carburetor is sticking and the working parts of the float mechanism should be adjusted to work more freely.

Voltage of Generator.

I have a direct current dynamo that generates ninety volts. I would like to cut that down to ten or twelve volts. Please give the data for a resistance coil that will reduce the voltage from ninety to ten. In what way will the amperage be changed? When the engine slows down the voltage of the generator drops. Would the voltage drop proportionately through the resistance coil? Could the coil be made so that the voltage would be the same regardless of the voltage of the generator? What would be the voltage of the dynamo at 1,770 R. P. M. if it generates 125 volts at 2,400 R. P. M.?

Answer.—You did not state what amperage you desire your coil to transmit. The greater the amperage the larger and longer the wire must be. To transmit ten amperes use about 700 feet of No. 12 iron wire, B. and S. gauge. The voltage after passing through the resistance is proportional to the voltage of the generator. It cannot be otherwise when a single resistance coil is used. There are voltage regulators made of many coils, some of which may be cut out by short circuiting them when the voltage drops. If 2400 R. P. M. produces 125 volts, 1770 R. P. M. will produce about 92 volts.

Recharging Dry Cells.

How can an ordinary dry cell be recharged?

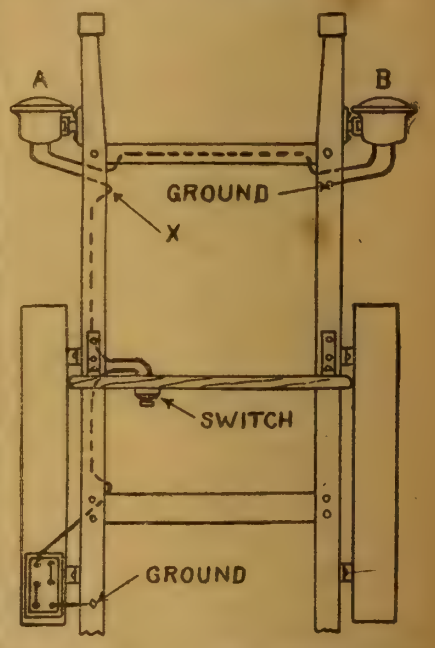
Answer.—It is not practical to recharge a dry cell. Some additional current may be obtained from an exhausted cell if the pasteboard cover is removed, a few holes punched through the zinc and the cell covered within one inch of the top by a weak solution of sal ammoniac in a glass or earthen jar. After standing in the solution twenty-four hours the cell may be used as a wet battery. It is not as strong as a new cell, however.

Wiring Auto Headlights.

I would like to have published an illustration showing how to wire two headlights on an auto from a storage battery.

Answer.—The illustration shows the series system of wiring headlights. When this system is used the lamps must be only half the voltage of the battery. Ground one battery terminal. Connect the other battery terminal with the switch. From the switch run a wire to headlight A. From headlight A run a wire to headlight B. From headlight B run a wire to the frame and ground it.

If you wish to use lights of the same voltage as the battery the lights must be wired in multiple. This is done as follows. Ground one terminal of the battery; run a wire from the other terminal to the switch and from the switch to headlight A as before. Then run a wire from headlight A to the frame and ground it. Run a wire to the main wire and from this wire to headlight B. Every connection should be soldered and taped.



From B run a wire to the frame and ground it. For wire use low-tension cable or regular light wire. It must be well insulated at all points and should lay inside the frame wherever possible so as to be out of the way of injury.

Engine Loses Power While Hot.

We have a six-horse-power gas engine that has been in use eight years. It runs fine excepting that it loses some power when it has been run an hour or two on a heavy pull. The compression is quite good, but not perfect. What is the trouble?

Answer.—When your engine begins to lose power stop it and turn it over by hand to see if the pistons or any of the bearings are sticking. Also try the compression. Examine the valves to see if they stick. The chances are that your trouble is due to loss of compression when the oil becomes thin from the heat. It may be that the heat expands the exhaust valve stem enough to make it open too early. If the gasoline supply pipe is where it becomes quite hot part of the gasoline may vaporize in the pipe and interfere with the flow of the gasoline through the needle valve.

The Wisconsin Farmer

THURSDAY, NOVEMBER 30, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

A STRONG VOICE FOR PEACE.

I WANT thus publicly to thank my good friend, Mr. John Schuette, president of the Manitowoc Savings Bank, of Manitowoc, Wisconsin, for his letter praising my recent editorial, entitled "A Picture of War." It is indeed encouraging to have such words of praise from so substantial a citizen.

Just to what extent we can take the results of the recent presidential election as a voice of America against war, there will doubtless be considerable difference of opinion. Practically the entire East, with the notable exception of Ohio (where the railroad vote is heavy) went against President Wilson, whose re-election was urged on the ground that "he has kept us out of war." On the other hand, however, President Wilson carried all but four states west of the Mississippi river. The trans-Mississippi east has undoubtedly been more directly affected, and has profited to a greater extent, by the European war than has the trans-Mississippi west, notwithstanding that $2 wheat and $1 corn are now almost realized facts. The East has dabbled in "war bride" stocks, and has manufactured munitions of war in such immense quantities that it would prosper more by a continuation of war than by its cessation. The thought is most abhorrent to me, but I undoubtedly believe there is a large proportion of our population which voted in the hopes that the European war would continue [illegible] might wax still richer on the [illegible] blood sacrifices of their brothers across [illegible] there are those who would be [illegible] to plunge our own beloved country into war, in order to fatten off their nation's perils and needs. Out here in the grain belt we cannot understand such an unpatriotic attitude. We have indeed prospered, as a result, largely, of the war and the grain and live stock prices which have resulted therefrom, but there are few among the farming class here in the grain belt who would not willingly forego their added profits if, by so doing, they could bring the awful war to a close.

It is not always easy to oppose those who speak with voices as loud and insistent as do those who are now clamoring for war to continue, so I appreciate Mr. Schuette's letter all the more. Here is what he is so kind as to say:

> I was pleased when I read your able editorial "A Picture of War." It was encouraging. At this time it takes courage to say anything which will tend to dampen the intense propaganda for militarism made by directly interested parties. If it were not for these, our people could not be swerved from our traditional military policies. But, of course, by a gigantic effort to inculcate the war spirit, which is acclaimed to be the most noble, heroic and patriotic, and calling those not agreeing cowards and traitors, we must expect that this will bring them converts, especially because the pacifist is not directly interested and does not have an organization to combat them.
>
> I feel sure if all papers would paint wars in their true colors as you did, and advocate universal peace, and the United States take the initiative for its consummation, war could be abolished.

I can only add that I hope and pray my good friend will do what he can to bring about the day when war shall, indeed, be abolished, and we find the actual realization of that which the poet had in mind when he sang:

> Till the war-drum throbbed no longer, and the battle-flags were furled
> In the Parliament of Man, the Federation of the World.

I shall do what little I can to hasten the day. Perhaps, by working together, all of us, we can so influence public opinion that war and its horrors may be banished from our midst and our children and our children's children may know of war only as they read it in their histories and aged grandfathers tell it to the little tots gathered around their knee in an everlasting and international peace which nothing shall ever shatter.

HUNGRY FOR THE FARM AGAIN.

I AM in receipt of a letter which tells, more vividly and eloquently than any words of mine possibly could, the heartaches and disappointments which lie behind the glare and glamor of the lights of a great city. The letter was written to me by a young man who left the farm four years ago and who now longs to return to "God's country" where he can live his life honestly and usefully, far away from the hideous mockery and make-believe which masquerades for existence in all too many of our large cities. I do not know the writer personally, but I can see him (in my mind's eye) seated at a little table in a back-hall bedroom on the third or fourth floor of a large brick building hiving scores of other struggling workers. He is dreaming of fields knee-deep in clover, of lowing herds winding homeward in the dusk, of the whirr of the reaper, of the tinkle of cowbells and the sound of a cheery "halloa" from the house as the work horses come down the lane with a happy youngster perched astride the off horse, making glad the heart of his proud father. It is a far cry from such sights and sounds to the clatter of the elevated railroad grinding past the third floor of a city tenement and a homesick man writing to an editor he never saw, in the hope that somewhere, somehow, sometime soon, he may get a chance to go back to the farm. Here is the letter, exactly as it came to me:

> Mr. Pierce:—I am writing you in the hope that you can refer me to some up-to-date farmer who could use a good, all-around man this winter to help on the farm. I am a young man, twenty-five years old, a German, born and raised on a farm. When my folks died, four years ago, I gave it up and came to the city to learn the automobile business. For the past three years I have been a follower of the gasoline circuit as a racing mechanic and only left that position to take another one here in Chicago as final tester for a new automobile company, but I don't like it at all, and for that reason, I am writing you this letter.
>
> I don't like the looks of the "bright lights" and all the rest that goes with them any more, and want to get back again where I belong; back where, when one's work is done, he can sit down beside a big base burner and a good old coal-oil lamp, and read the daily paper in peace and quiet, and then to bed, instead of coming home, changing clothes in a hurry, catching a car for downtown to meet some friends, and after the show, going to an expensive supper, so that when one does finally get home it's time to go right back to work again.
>
> Yes, I want to get back again and live the days of early youth on the farm once again, away from all the noise, the entertainments and all the rest of it. So if you can refer me to some good farmer that can use a good man for the winter to help him in the work (and I can do it all, from milking in the morning, to carrying in the coal at night) I would be pleased to hear from you as soon as possible. You surely must know of a good many, but, of course, I don't want to get out on some little, old, run-down place, but a rather up-to-the-minute place where my services would be appreciated.
>
> As I have said before, I don't care about the wage part of it at all, as long as I get my meals and a little change for spending money. I have enough money, myself, to lay around for a couple of years if I should so choose to do, but I want to get back out in God's own country, and if you can tell me of such a place, I sure would appreciate it very much.

It is you, my friends, who must answer this letter, rather than myself. I am simply the postman who brings this application for a position to your door. There must be many among you who need such a one, as much as he needs you. I do not know him, excepting as his letter reveals his character and aspirations to me; but I do know that a man such as he appears to be, who is working for the love of work and has had the business foresight, skill and thrift to accumulate means of his own, who combines mechanical skill with all kinds of agricultural knowledge, and who leaves the city for the country of his own free choice, should find a hearty welcome on many a grain-belt farm home. A man who has had four years' experience as an automobile mechanic would surely be a valuable man about a farm in keeping the family automobile in repair, the machinery in good working order and in performing the hundred and one tasks that call for mechanical genius and skill.

Will not those of you to whom such a thing appeals as a plain, matter-of-fact, business proposition, if not as a matter of sentiment, write to me regarding it, so that I may promptly advise this young man waiting in Chicago for my answer? By working thus together it may be that we will be able to secure you just the kind of help that every farmer needs and find a deserving young man the kind of a home his heart longs for, where life will be richer, not in dollars and cents, perhaps, but in all that goes to make up the best rewards of honest toil and service, such as cannot be found amid the grime and noise and confusion of a big, rushing, roaring city.

FARM LOANS TO THE TENANT.

THREE or four weeks ago, in the course of an article descriptive of the workings of the federal farm-loan law, I quoted a statement made by Mr. P. W. Goebel, president of the American Bankers' Association, to the effect that second mortgages on farms thus bought by worthy tenants will be considered first-class investments for trust companies, investment banks, insurance companies and individuals. You may recall that Mr. Goebel cited the instance of a deserving tenant possessing $1,000 in cash, a span of horses, some cows and some sows. He has this tenant go to his local banker and explain that he can buy eighty acres of land for $50 an acre, borrow $2,000 from the federal land bank and, by paying down $1,000 (which he has on hand) need only $1,000 more, which Mr. Goebel declared he could raise by means of a second mortgage, which investors would be glad to take. The publication of the article setting forth this illustration by Mr. Goebel brought me the following letter from Mr. Anthony Sand, of Center Point, Iowa:

> I am a reader of your valuable paper and take great interest in it. I read Mr. P. W. Goebel's article, but he failed to state where this land could be bought for $50 an acre, where eighty acres would rent for from $325 to $400 a year, or where a man with $1,000 invested in the land and perhaps $800 in stock could make a living on eighty acres and pay $290 expenses and $100 on the purchase price of the land in a year. If I am not asking too much I would like to ask Mr. Goebel where this land can be bought for that price. Land around here is selling for from $150 to $225 an acre and renting for from $4 to $7 an acre.

I felt sure that Mr. Goebel would be perfectly willing to give the information desired, so I forwarded Mr. Sand's letter to him, with the result that this reply, from Mr. Goebel, has just reached me:

> Answering your letter of November 18th in regard to my suggestion for a second mortgage in case of farmers who have patronized the new federal farm loan bank for their first mortgage, will say that, of course, I was simply using this as an illustration, but I had in view land in the central western part of Kansas and parts of Oklahoma. The principal point I aimed to make was that where the interest, including amortization payments, on the first mortgage and the interest and a reasonable reduction of the principal on the second mortgage each year, together with taxes and so on, was within the rental value of the land, it was safe to make the second mortgage loan, always taking into consideration the ability and integrity of the man behind the mortgage.
>
> I am perfectly aware that in many sections of Iowa and other states so favorably located the per cent of the principal that the rental value represents is so small that this could not be done, but also as a rule in those same states the insurance companies are making such a low rate that it will be a considerable period before the land banks will do much business.

Mr. Goebel shares the opinion of many bankers in this section of the country, to-wit: That the new federal farm-loan banks will not find as ready a market for their funds in Wisconsin, Iowa, Illinois, Nebraska and Missouri as they will in the sections of the country where land values are not so high. At the same time, I incline to the belief that they will find enough farmers desirous of borrowing from them (because of the low rate of interest and the installment plan of repayment) to keep them going from the very first. I am in receipt of a letter today from the president of a large loan company in Omaha, in which he frankly says: "The day of the 7 per cent farm loan is over for good around here." This concern has been loaning heavily on lands in the irrigated section of western Nebraska, and has reduced its interest rates 1 per cent in the last year. Is there any connection between such a reduction and the prospect of the new federal land banks making serious inroads on their business? I am inclined to believe so.

Speaking of the possibility of tenants using the new law to obtain loans to enable them to buy farms of their own, I want to tell, briefly, of a couple of instances which have just come to my attention. I personally know of two men, here in the grain belt, who, after three years as farm tenants, have made and saved enough to buy places of their own, one buying 160 acres of $100 Iowa land and the other 390 acres of western Montana land, at what price I do not know. These two men have had an annual income of about $10 an acre from their land for each of the three years, and by thrift and frugality have been enabled to save between $6,000 and $8,000 in three years, enough to pay 50 per cent of the purchase price of their land. Men like this are good risks for a second mortgage any time and any place, for, after all, it is the man that counts fully as much as the security given. I can readily see where investors would be perfectly willing to take a second mortgage on land owned by either of these two men, because they know that they are worthy, industrious, and will work the land efficiently. Mr. Goebel was probably only "supposing" the illustration he cited, but he had ample grounds for the statements which he made.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION
MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

A Splendid Issue.

ATTENTION of our readers is called to a number of interesting special articles in this issue of The Wisconsin Farmer. These articles are a fulfillment of a promise that we would constantly aim to improve The Wisconsin Farmer and make it each week of more interest to our 90,000 readers. A report of the Wisconsin Potato Growers' Convention and Show, at Eau Claire, will be found on page 5. The Wisconsin Baby Beef Contest and Show, at Madison, is also reported in this issue, and Alvin Morley in a letter to this paper gives his experiences in raising the animal which won first prize in the contest. Some especially interesting matters are discussed in the departments this week and surely every reader who has a child in school will be interested in the niftiest little country school building in Wisconsin, which is just being completed in the town of Maine, Marathon county. Many interesting matters are coming up this winter which will be of special interest to farmers, and we believe that it will pay every reader to pay regular attention to these articles and read them carefully. The editors of The Wisconsin Farmer are making a careful study each week of the field we are aiming to cover, and trying to give the very best that can be secured. They are also studying other farm papers, not with a view to imitating, but rather with a view to giving our own splendid company of subscribers something better than they can secure in other papers.

Wisconsin County Agent Keeps Busy.

A RECENT estimate has been made of the extensive work done by County Representative L. L. Oldham in Walworth county. There are 2,200 cows in four cow-testing associations in this county; three additional farmers' clubs have been organized; talks, demonstrations and encouragement have been given to nine other clubs; three boys' and girls' clubs have been brought into existence, etc. In addition to this, Mr. Oldham has conducted experiments covering marsh lands, alfalfa, grains, and has helped with automobile farm tours, oats smut demonstrations, and many other important matters. He made 703 calls discussing with farmers such subjects as orchard spraying, commercial fertilizers, balanced rations, use of disinfectant methods, preparing animals for the show ring, etc. Demonstrations were given on eleven farms.

Walworth county now has twelve farmers' clubs, three having been organized in the past year with a total membership of 1,456 each in less than a year. Mr. Oldham has been responsible directly or indirectly for nearly $40,000 worth of live stock.

Wisconsin Corn and Other Crops.

OUR readers will not be surprised to learn that the November estimate of the corn yield in Wisconsin is 62,600,000 bushels. This estimate is made by the Federal Department of Agriculture. This same department reported a little over 40,000,000 bushels of corn in 1915. The November estimate on corn in Wisconsin is 61,000,000 bushels higher than the October 1st estimate. The corn crop in this state is much bigger and better than some people had judged it would be. In fact, on September 1st there were those who feared it might not be much larger than last year. On the contrary it is 50 per cent greater than last year, and the quality is much better.

Otherwise than corn, the November report of the Federal Department of Agriculture as it affects Wisconsin crops, is not materially different from the October report. The only discouraging feature is the yield of potatoes, which is estimated at 14,000,000 bushels, or not much more than half of the final report on yield in 1915. However, potatoes were worth more than three times as much November 1, 1916, as they were November 1, 1915.

A notable increase in crops is in tobacco, which is estimated at nearly 56,000,000 tons this year—an increase of almost 20,000,000 tons over the 1915 yield.

The increase in yields is not so marked as the increase in prices. We have about 17,000,000 bushels less oats this year than last year, but the price is increased almost 33 1-3 per cent.

It is fortunate for Wisconsin that the corn crop has matured so well. Farmers, as a rule, are in a quandary as to whether this corn ought to be sold at the present high market, fed, or held for a higher market. Of course, a very large per cent in Wisconsin must be fed, as in this manner we will keep up our dairy production.

We have quoted so many advances in prices of cheese and butter that it begins to be an old story. When cheese can be sold at 25 cents a pound at the factories, and butter at 35 cents to 37 cents and 38 cents, the price of feed does not become such a big problem. It remains to be figured out, however, where the farmer is getting his full advantage of the advance in dairy products.

The November crop report gives Wisconsin 878,000 barrels of apples, which is approximately 100,000 barrels more than the October estimate.

Wisconsin Rural Teacher.

IT MAY not be generally known among our readers, but the district school-teacher who returns for the second year and renders satisfactory services receives $2 per month from the state. During the third year they receive $4 a month, and after that $8 a month. So there is some incentive for a rural teacher to improve herself and to give such satisfactory service as will result in her reemployment year after year. The purpose of this law evidently was to get away from the idea that a school-teacher could make no advancement in salary and remain in the same district. Furthermore it has been difficult to keep the best school-teachers in the country.

Miss Ella V. McDonald, of Oconto county, has advised her teachers relative to the information which must be secured before teachers are eligible to state pay. Among the things which the state wants to know are the following:

Does the teacher keep the school room tidy and clean and does she preserve good order?
Is the school property equipped and if not is the teacher using good judgment and persistence in trying to remedy the defect?
Is the teacher doing indifferent work on any subject or subjects?
Does the teacher show skill in selection and use of material outside textbook work?
Does the teacher show evidence of preparing for her work and is she skillful in stimulating thought and adapting herself to her work?
Does the teacher look after the grounds and outbuildings and pay attention to ventilation, light, proper seating, hygienic and sanitary precautions?
Is the teacher interesting the community in the work of the school?
Does the teacher attend teachers' associations and read educational literature?

In other words, the state wants to know whether the teacher is making a profession out of her work or simply holding down her job.

Wisconsin Prices in War Days.

IN THE light of the present-day prices for produce our readers may be interested in the following table for prices for products in Wisconsin in 1857 and 1864, given by a Sauk county farmer:

Year 1857—Flour, per sack, $4.25; oil, per gallon, $1.50; sugar, six pounds for $1; calico, per yard, 20 cents; tea, per pound, $1; matches, per box, 10 cents; nails, per pound, 7 cents; dressed pork sold at 5 cents per pound. Today it is worth 10½ cents on foot. Ginseng sold at 20 cents per pound. Today it is worth $7 per pound. Dairy butter sold at 15 cents per pound. Now worth 35 to 40 cents. Eggs, 10 cents per dozen. Now worth 28 to 38 cents.

Year 1864—Calico, per yard, 40 cents; sheeting, per yard, 62 cents; cotton flannel, per yard, 60 cents; blue denim, per yard, 60 cents; ticking, per yard, 70 cents; sugar, four pounds for $1; salt, per barrel, $5; kerosene, per gallon, $1.25; raisins, per pound, 40 cents; clothes pins, per dozen, 20 cents; suspenders, per pair, 85 cents; chickens sold for 15 cents each, now worth 50 cents to $1; wood sold for $1 per cord.

One difference between 1857 and 1916 is that the farmers of this state were paying a tremendous price in the early days for what they had to buy, and getting very little for what they had to sell. We are at least a great deal better off today, because our farm products demand a good price.

Wool Is Sky High in Price.

IT LOOKS now as if sheep breeders were to have their innings, indicated by the fact that scoured wool has already sold in American markets for upward of $1 per pound. Of course, most of the 1916 clip is out of the hands of the producer, and the middleman is reaping the big reward this year. Prospects, however, are bright for the 1917 clip, and there are those who are predicting that as high as $1.50, or even $2, will be paid for scoured wool next year.

The American Sheep Breeder, in a recent issue, undertakes to explain the cause of present prices. England needs wool and more wool for war purposes, and has commandeered the clip of the United Kingdoms, and has embargoed the clips of New Zealand and Australia. This leaves the United States and South America as the only large open markets. It is estimated that already 30,000,000 pounds have been imported into the United States from the 1916 clip of South America, and most of this has been purchased at from 47 to 51 cents per pound. Nowhere is there cheap wool in sight, and this accounts for the strength of the wool market at the present time.

This wool situation will no doubt have the effect of enlarging the flocks for next year, and, as we are just entering upon the breeding season, it behooves every flock owner to carry through as many head as possible. The breeding flock may be wintered cheaply by those who have on hand a goodly supply of legume hay, either red clover or alfalfa, and the flock that is fed liberally on either of these forms of roughage and receives, in addition, toward spring a little grain daily, such a flock will go through the lambing period in good shape, and there is no telling what their fleece will be worth next spring, but it is safe to say that values will be reached that have never before been approached in the American markets.

An Experience With Hog Cholera.

IN THE following communication one of our subscribers describes an experience that he passed through in getting hog cholera on his farm, causing himself considerable loss, the whole transaction growing out of a kind act that he performed for one of his neighbors. He writes:

Cholera is one of the worst enemies the hog breeder has to contend with and, to a large extent, I believe the farmers can control this dread disease. Of course, if he has never had the disease among his hogs he may be at a loss as to how to proceed at first, but I believe that if he has it once he will know it again, and, of course, be better prepared to handle it in case of a second outbreak.

Early last spring a man drove a bunch of stock hogs by my farm and one little red sow gave out from driving, or so he said, and he asked me to take care of it till he came with another bunch in a few days. I did so, but, rather fearing she might be diseased, I kept her some distance from the other hogs and the third day she died. I buried her and thought no more about it, as the man was positive that none of his hogs were diseased. But in about two months the hogs that had run in the same field after this one was there, began to lie around and look sleepy and one or two seemed to have no appetite. I had never had any trouble of this kind and so merely thought hogs wormy or lazy on account of warm weather. Being exceeding pressed getting ready for crops the herd was neglected until several got sick and they soon began to die and when they once began to die they went in a hurry. I guess about every hog cholera cure was tried that ever was heard tell of and even tried several of the widely advertised preparations that were sold under a "positive guarantee" seemed some few would get well any way they were doctored or not, but by far the number died that got sick.

Finally a neighbor's hogs began to get sick we both ordered serum from our state department and both herds were vaccinated and so far the ones that were not sick at the time of vaccination are still well and about half of the ones affected are still alive, and all seem to be in good health now and ready for the market. Nearly all of the little pigs that were following dams that were vaccinated died and it was our experience that the disease was more fatal to little pigs and shoats than larger hogs. Should we ever have another outbreak of the disease, serum will be ordered at once and all will be vaccinated carefully and separate well ones from sick ones.

I believe a man can ward off disease of this nature to a great extent by keeping his hogs in good health and especially by keeping them free from lice and worms. I have always had pretty good success in keeping my hogs healthy, but find it more difficult to keep them in good health through the winter season, when they are more or less confined.

While the science of immunization against disease may not yet have reached a point where every herd can be saved by the serum treatment, it is nevertheless true that the loss among healthy hogs, that are properly treated with good serum, is so small as to be almost negligible. This being the case, two important factors should be kept in mind by every man who is caring for a herd of hogs.

In the first place, they must be kept free from internal and external parasites. The former are sometimes not easily detected, as one must wait until the effect shows up by the hogs indicating a lack of thrift. As a precaution, therefore, it is usually advisable to administer sensible doses of form remedies. Lice are usually detected shortly after they make their appearance by the observing caretaker, and they should be fought at once, either by spraying, or by the use of hog oilers.

The other factor relates to safeguarding the herd against real hog cholera, either by the use of serum only, or by the employment of the simultaneous system, which means permanent immunity. As a general proposition, one can afford to let well hogs alone, excepting in those instances where they are shipped from time to time for breeding purposes. The custom seems to be well-nigh established of immunizing breeding animals, but thousands and tens of thousands of grade herds are taken through to the finish without any treatment whatever. The prudent man who is engaged in hog raising on anything like an extensive scale will keep himself closely in touch with a skilled veterinarian whose services he can rely upon should disease break out in his herd.

The instance here related, regarding the care of the pig for a neighbor, should remind us of the necessity of maintaining a temporary quarantine in the case new purchases are made of either males or females when these have not been immunized by the serum treatment. Where an individual hog house is available, it involves but little trouble to move one of those houses to an isolated point and make a temporary yard with woven wire, so that the stranger hog may be kept there long enough to demonstrate that there is no infection in his system.

WISCONSIN POTATO SHOW.

Poor Potato Year With Yield Cut in Two Does Not Mar Success of Nation's Best Potato Show—Oneida County Carries off the Honors.

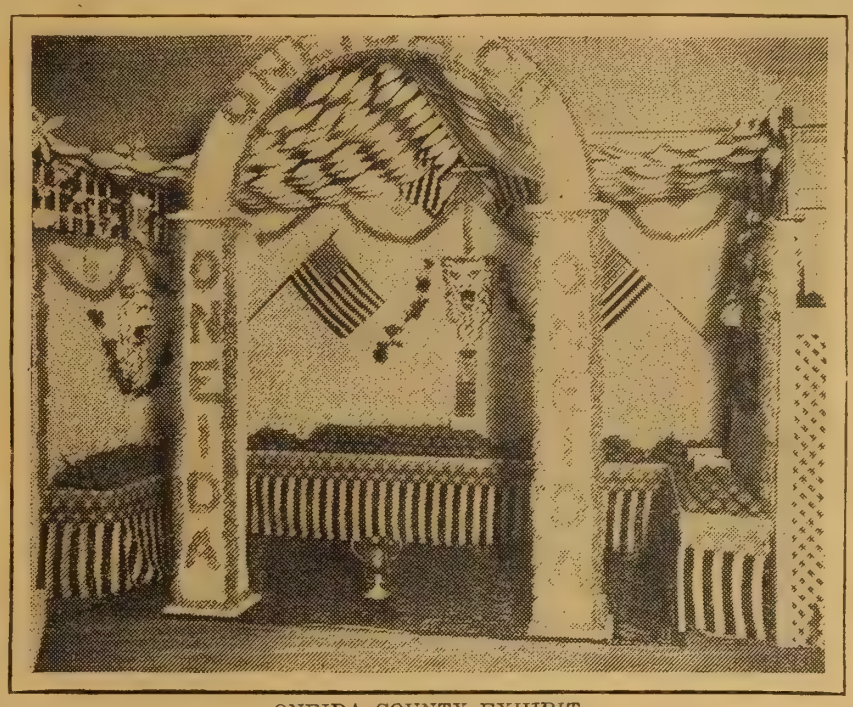
A FEW SPEAKERS PROMINENT AT WISCONSIN POTATO SHOW.

From left to right—F. G. Swoboda, Langlade county agent; J. M. Coyner, Portage county agent; H. P. Henry, St. Paul, Minn., expert in markets and rural organization, an employe of the federal department of agriculture; George M. Briggs, agricultural agent, Burnett county; R. L. Cuff, agricultural agent, Barron county; O. H. Benson, in charge of boys' and girls' club work, federal department of agriculture; G. M. Householder, agricultural agent, Rusk county.

DESPITE the fact that this has been a poor potato year in Wisconsin, the annual show held at Eau Claire was an unqualified success, both from the standpoint of exhibits and attendance. Although the yield in this state has been cut down from a normal amount of 35,000,000 bushels to less than 15,000,000 bushels, and the quality is 80 per cent as compared with a ten-year average of 89 per cent, a large exhibit of good quality was assembled. Estimates give the 1916 average yield in state as only forty-seven bushels he acre, while the ten-year average 102 bushels. But potatoes, though rce, are very valuable and potato wers are enthusiastically looking forward to bigger things in the future. The show this year demonstrated one thing, if nothing else, and that is that the very best cultural methods count for much as the high quality stock that was to be seen at Eau Claire last week did not come from fields where the hit-and-miss methods had been employed.

This has been an unusually severe year on the potato growers and this was reflected largely in the individual exhibits at the state show which were far below the average in numbers, while there were more county exhibits this year than ever before, fifteen in number, and two more than at Marinette last year. The open class entries dropped to about half, but the quality of the stock shown was good and the judges agreed that the quality of the county exhibits, taken as a whole, was above the usual standard and by far the best that has ever been offered at the state show. It is true that a bad year will be reflected to some extent in the show stock, but the county managers were able to get together some splendid samples regardless of the unfavorable season. The open classes fell off principally because the counties needed the best stock in their booths and this naturally brought about a shortage of good stuff for individual entry. In this respect was there the only indication of a bad season, if one were to judge entirely by the show itself.

The work which has been done along the line of standardization by the Wisconsin growers in the past two years reflected to a great extent the importance which the show and the state association have over this industry in Wisconsin. Less than eight varieties were to be found in the entire show, which tends to bear out the belief that the best growers have learned the value of picking standard varieties and sticking to them. There were many counties which last year had four and five varieties that dropped to two this year; some with three varieties last year dropped to one or two varieties this year and the same held true in the open classes. The Green Mountain, Rural New Yorker, Triumph and Burbank were the only four varieties seen in any abundance with the Green Mountain and Rural New Yorker easily in the lead in quantity. This has all come about through the work of the state association, supported by the state show, and the old theory that to have a winning county exhibit it were necessary to see how many kinds of potatoes could be crammed into a booth has been entirely dissipated.



ONEIDA COUNTY EXHIBIT.

First-prize winner at Eau Claire Potato Show. Oneida county has won first on county exhibit for three consecutive years.

It was indeed gratifying to find such splendid displays when the impression had gotten abroad that there were no good potatoes. There will evidently be plenty of good seed next year, although it will be high in price because of the ruling market prices on table stock, but to these growers belong the credit, for when blight was threatening they sprayed, when it was dry they cultivated properly and gave their stock careful attention. The exhibits proved beyond doubt that the man is a big factor in potato growing as well as soil and weather and the big yields and the good quality stock invariably came from the fields that had had the best cultural care during a hard season.

Oneida county for the third successive time won the banner for the best county display. This tends to not only prove that Oneida county grows good potatoes but it is also a testimonial to the work of selection that is being carried on year after year and to a large quantity of good stock from which to make show selection.

The county awards were made as follows:

County	Score
1. Oneida	92 2-3
2. Barron	90 1-2
3. Rusk	87 2-3
4. Lincoln	84 2-3
5. Price	84 1-6
6. Langlade	84
7. Oconto	83 2-3
8. Sawyer	82
9. Waupaca	81 2-3
10. Wood	81 1-3
11. Forest	80 1-3
12. Portage	77 5-6
13. Bayfield	76 1-6
14. Eau Claire	74 1-6
15. Dunn	67 5-6

Greater interest was evident this year than ever before in the county exhibits and the arrangements of the booths was especially attractive, although this is not taken into consideration in the awarding of the county ribbons. The quality of the potatoes shown was what counted. The judging was done by Prof. C. L. Fitch, of Iowa; C. W. Waid, of Michigan, and Prof. A. L. Stone, of Wisconsin, and

Farmers' Open Forum

[Editor's Note.—On another page will be found a report of the Wisconsin Baby Beef Contest, at Madison. Mr. Morley, whose letter is given herewith, won first prize on his Short-horn steer, and fourth on his Short-horn heifer.]

Putting Meat on Short-horn Calves.

To the Editor:—I entered two calves in the baby beef contest at Madison. They were a steer and a heifer and both were pure-bred Short-horns. The heifer was dropped October 30, 1915,

A. J. MORLEY, BARABOO.
Exhibitor in Wisconsin Baby Beef Contest, 1916.

and the steer October 25th of the same year. I began feeding oats and bran to the heifer just as soon as I could get her to eat it. I fed her for about eight months, twice a day, just on oats and bran. This was before I heard of the baby beef contest. Her dam was a good beef cow and was a medium milker. I soon put the heifer with a nurse cow after I heard of the contest. The steer also had a good nurse cow soon after. It took lots of patience to break them to lead and stand right. One of the biggest jobs I had was keeping them clean. I found that contentment was a good point to aim for. While I fed my calves just oats and bran to start with, I worked in a little oil meal, then a little corn meal, then some cottonseed meal and also a little molasses and salt in water with which to dampen their feed. In addition to this they had fairly good hay before them all the time. The heifer weighed 350 pounds when I began and now (November 18th) weighs 916 pounds, an average of about 2.8 pounds a day for 204 days. The steer weighed 503 pounds when I began feeding him and now weighs 1,060, an average gain of 3.41 pounds per day for 163 days. I discovered that it took about four pounds of grain to put on one pound of flesh. I think the contest is fine and I have learned a great many things by experience and have an ambition to learn more. A. J. Morley.

Sauk Co., Wisconsin.

PURE-BRED SHORT-HORN CALVES EXHIBITED AT BABY BEEF CONTEST BY A. J. MORLEY, SAUK COUNTY.

Suffrage and Race Suicide.

To the Editor:—Being a reader of your paper I was very much interested in a writeup on suffrage and race suicide in a recent issue.

It may be that I do not understand it right, anyway I am for woman suffrage and don't think race suicide has anything to do with suffrage. Anyone that will practice race suicide will do so if she has the ballot or not. You say Colorado and Missouri have less births than Wisconsin. I think I can give you some enlightenment on this question, as I was born and raised in Wisconsin and have also been in Colorado. Wisconsin is an agricultural state with a farm on every forty or eighty acres. Colorado is a mining state and a health state. Nearly every county in Colorado has a hot spring and nearly every large city has a sanitarium of some kind. I don't think that Colorado has half the female population in proportion that Wisconsin has.

I was in Duluth some time ago and saw about 200 women working in an office. About half of these are married women that have to go out and work to help support their families and Minnesota is not a suffrage state, either. Nearly half the women clerks in the largest department stores in Minneapolis are married and will have to continue to do the same, as their drunken, good-for-nothing husbands can't support their families.

Well, Mr. Pierce, I believe in giving my mother, wife and sister the same chance that I want myself. Here in the West there are at least ten good-for-nothing men to every one woman. Nearly every day one or more men come to my house asking my wife for something to eat. Still the same loafers think they are better than the woman who feeds them for nothing. Everybody has a right to their own opinions, but give everybody the same chance in this world. If there is race suicide in a family I am sure it is agreed on by the two sexes.

Sutton, N. D. C. L. Anderson.

UPPER WISCONSIN

Settler's Fence Problems.

In our issue of November 16th Mrs. Nellie Covant, of Wood county, wrote concerning the fence problem met by the settler. Mrs. Covant was under the impression that a settler cannot compel owners of the adjoining woods to share in the expense of the partition fence. We took the liberty of submitting Mrs. Covant's letter to Hon. W. C. Owen, attorney general for the state of Wisconsin, who has outlined in a letter to this paper very clearly the rights of the settler in the matter of fencing. Whenever a settler is occupying his land for the purpose of farming he may force the land holder or woodsman adjoining to share in the fence expense. Mr. Owen writes as follows:

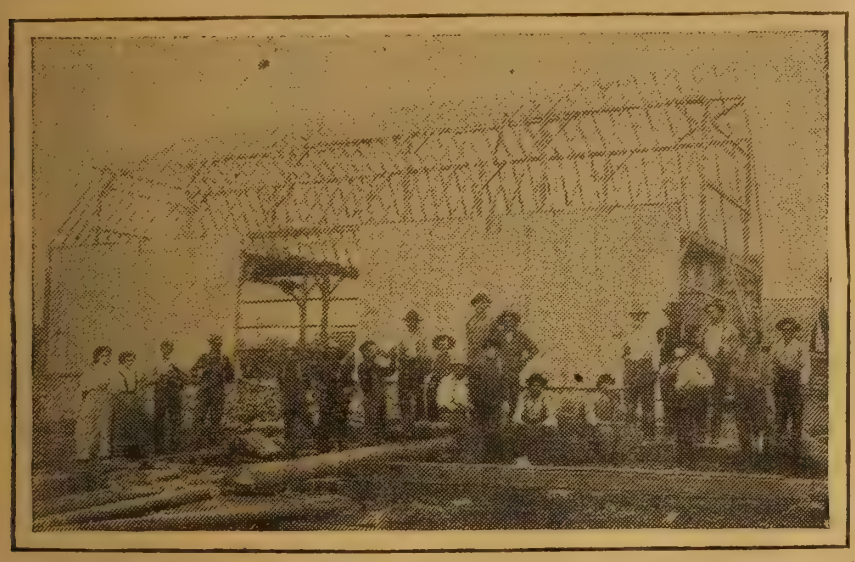
I have your communication of the 9th inst., in which you request information concerning the law of this state relative to the construction of partition fences between adjoining lands. You refer to the fact that settlers sometimes buy a tract of land in the midst of the woods and clear it, or part of it. You say you understand there is a law governing the line fence between two farms. But you are not certain whether this helps out the settler who wants to fence all around his clearing, or whether, under the existing law it is necessary for him to build the entire fence himself.

The law upon this subject will be found by reference to section 1391 of the statutes, which provides in part as follows:

"The respective occupants of adjoining lands, used and occupied for farming purposes, AND THE RESPECTIVE OWNERS OF ADJOINING LANDS WHEN THE LANDS OF ONE OF SUCH OWNERS IS USED AND OCCUPIED FOR FARMING PURPOSES shall keep and maintain partition fences between their own and next adjoining premises in equal shares so long as either party continues to so occupy the same, and such fences shall be kept in good repair throughout the year unless the occupants of the lands on both sides otherwise mutually agree.

The language capitalized above was inserted in the law by the legislature of 1915. Prior to that time owners of adjoining lands were required to maintain partition fences only when the land of both was used and occupied for farming purposes. The amendment, however, requires the owner of vacant and unoccupied land to bear this proportion of the expense of building and maintaining a partition fence if his neighbor is occupying the adjoining land for farming purposes. While under the law as existing before the amendment the settler under the circumstances mentioned in your letter can compel the adjoining owner to bear his proportion of the expense of building a partition fence, the amendment of 1915 changes the law in this respect so that now the settler can compel the owner of adjoining land to bear his proportion of the expense of building the fence, even though such adjoining land be not occupied for farming purposes.

It is very plain from the attorney-general's letter that our Upper Wisconsin subscriber was mistaken and that she really has a right to force the owners of big tracts of wooded land to share the expense of line fences. This is provided, of course, that she is occupying her own property for the purpose of farming and we are taking it for granted that this is the case.



SAMPLE OF BARNS BEING BUILT IN TAYLOR COUNTY, WIS.—TAKEN ON THE CHARLES PITZKE FARM.

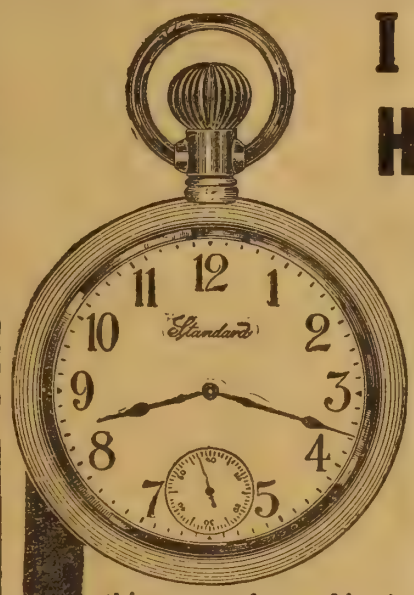
Julia of Maple Lane, 23.9 pounds of butter in seven days. Owned by Charles Pitzke, Taylor county, Wis.

BEGINNERS IN UPPER WISCONSIN GETTING A FINE START—ON THE CHARLES PITZKE FARM, TAYLOR COUNTY.

Favor Free County Fair.

At a recent meeting of the county board in Langlade county an expression was asked for as to whether the board favored a free county fair again in 1915. Every member of the board voted yes.

A number of readers of this paper have been asking about the care and management of Belgian hares. One subscriber wants to know if the male hare will kill the young ones if they are allowed to run together. Should they be penned up, or is it better to allow them to run loose? Those who have encountered the various problems connected with raising Belgian hares will confer a favor on a considerable number of subscribers by preparing a communication for this paper on the subject.



This beautiful special stockman's watch is as handsome a time-piece as anyone could want. It is a genuine New York Standard Watch—both case and movement being American made. It is seven full jewels, stem wind and stem set, with heavy bevelled crystal, double sunk dial, brequet hair spring, etc. The case is genuine nickel silver, handsomely engraved with a locomotive on the back. It is a watch that is specially designed to withstand a lifetime of the hardest and roughest usage and is Absolutely guaranteed in every way.

I WILL SEND YOU THIS HANDSOME STOCKMAN'S WATCH FREE

To introduce MY Stock Tonic to just a thousand more readers of this paper **I am going to give away** one thousand **magnificent Stockmen's Watches—Absolutely Free**—I'll send them at once—**to the first thousand readers** of this paper who send in the coupon below. With this watch I will also agree to send a big trial feeding of

WILBUR'S STOCK TONIC the Greatest of All Live Stock Conditioners.

What is more, I will send you this Stock Tonic with the distinct understanding that it is to be used for two whole months at my risk—that if at the end of two months feeding the Stock Tonic has not been entirely satisfactory no charge is to be made. I simply want you to make a two months' trial of my Stock Tonic with the understanding **that if it does not fatten up your live stock—kill the worms—that if it has not paid you to feed it**—no charge is to be made. Then as a special inducement and to pay you for the trouble in making the test I will **give you—Absolutely Free—one of the Stockman's Watches shown above.**

I Will Prove To You

that my Stock Tonic will positively rid your live stock of worms, fatten them up and keep them in the pink of condition. I will prove to you that you will actually get **more milk from your cows,** that you will **fatten your hogs, steers, sheep and poultry** for market in less time, that you will **save grain, prevent disease** and **make more money from each animal you own.** I have such absolute faith in Wilbur's Stock Tonic that **I take all the risk** in this trial feeding.

There Is No Secret About This Tonic

It is composed of twelve separate ingredients—plainly printed on every package—each one carefully selected and absolutely pure. These ingredients are acknowledged by veterinarians everywhere to be the **finest tonics, appetizers, digestive aids and worm dispellers known to medical science.** Each one has a special purpose. A compound of these herbs, roots, etc., is absolutely sure to **condition any animal—keep the blood clear—the system free from worms and disease and force the animal to put on fat rapidly.** I have proved it so often **there is no doubt about it.** I have made and sold this Tonic for over thirty years and over a million of the best stock raisers in America are feeding it every day—I have thousands upon thousands of the finest kind of letters from all parts of the country telling me of the wonderful results from feeding this Stock Tonic. Now all I want to do is to **show you that what it will do for others it will do for you.** And as a special inducement just to get you to make this trial—at my risk—**I am going to send you one of the handsome Stockman's Watch.**

Simply Fill Out The Coupon

SEND NO MONEY. Just find out by actual test on your own stock that **my tonic will make money for you.** I have a watch all ready for you if you send that coupon right away. **You can't possibly lose anything**—you have everything to gain. **Isn't it worth a postage stamp? Do it now—at my risk—fill out the coupon and mail it to me at once.**

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delayingprinted answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

Law Questions.

Account Outlaws in Five Years.

Mr. C. R. Fleming, Independence, Wis.—How long can an open account run in the state of Iowa before it is outlawed?

Answer.—Five years from and after the date of the last item charged in the account.

Written and Verbal Contracts.

A Subscriber, Frederic, Wis.—(1) Is the testimony of a foreigner who is not naturalized, acceptable in a court in Wisconsin? (2) Is a verbal contract binding in law if there is one witness to it?

Answer.—(1) Such testimony is acceptable in court. (2) Contracts for the sale of land or any interest therein and leases for more than one year must be in writing—also contracts not to be performed in one year and contracts for the debts or obligations of another person and contracts where the consideration is marriage must be in writing. Other contracts made verbally with one witness are good.

Accident to Colt in Pasture.

A Subscriber, Benson, Minn.—A takes in other people's stock to pasture on his farm for pay. B put a colt in A's pasture agreeing to pay A $1 per month. The colt got fast in a slough in said pasture and was found dead by A and A did not immediately notify B of the fact, on account of having so many horses in the pasture, that he did not then know exactly who owned said colt. B demands that A shall pay him the full value of the colt. Is A liable for the price of the colt to B?

Answer.—We are of the opinion that B cannot recover the price of the colt from A by law. If B should sue A for the value of the colt B would have to prove to the satisfaction of the court or jury that the loss of the colt was the result of carelessness or negligence on A's part and it would be likely that the court or jury would consider that it was an accident and not A's fault.

Widow's Pension—Correction.

Mr. W. B. Kellogg, Attorney, Madison, Wis., writes us as follows: I notice in your Legal Department a question from a correspondent at Iron Mountain, Mich., concerning widow's pensions in Wisconsin. You state that there is no law in Wisconsin granting such pensions. You probably overlooked Section 573-f (doubtless due to the defective index to our statutes) in which certain aid to widows and others who have in their care dependent children, is provided for. Under this section the judge of a juvenile court, or a county court where the child resides, may grant aid on the following conditions: There must be one or more children living with, or dependent upon, the mother, one or more of whom shall be under the age of fourteen; the mother must be a legal resident of the county, and a widow or the wife of a husband who is incapacitated for work, or who has been sentenced to a penal institution for a year or more, or who has continuously deserted her for a year or more, during which time all provisions of law have been used to enforce support and none has been obtained; the mother or other person must be of good moral character, and the proper person to have the custody of the children, and the period of aid must be likely to continue longer than one year, and the aid must be reasonably necessary to save the child from neglect or danger to health; the aid granted shall be sufficient to enable the mother to properly care for the child or children and shall not exceed $15 per month for the first child and $10 per month for each additional child, nor exceed $40 per month in all.

I thank Mr. Kellogg for his correction of my mistake and also Mr. James E. Dimmick, treasurer of Jackson county, Wisconsin, for calling attention to same error.—[Editor Legal Department Wisconsin Farmer.

Fraudulent Transfer of Property.

A Subscriber, Dickinson, N. D.—A man in North Dakota owns property and is in debt. If he should transfer and deed his property and real estate to his wife can his creditors collect their claims?

Answer.—In such a case if it can be proved that the man transferred his property to his wife for the purpose of avoiding the payment of his debts his creditors could take the property to pay their just claims.

Trespass—Fences—Damages.

A Subscriber, Forestville, Wis.—I own two forty-acre tracts of land in Wisconsin, and a road runs between them. I have a gate in each fence along the road, through which I pass from one forty to the other. My neighbor's cows come upon my land every day and I have told my neighbor several times to keep them out, but he will not do so. I have stretched wires at the two gates, but the cows break through the fence, wires and all. What can I do about it by law?

Answer.—If your fence and gates are lawful you can recover damages by law for the injury his cows do. If your fences or gates are not lawful you cannot recover damages.

Land Sale—No Commission.

A Subscriber, Rapid City, S. D.—On the 8th day of June, 1916, a certain man in Butte county, S. D., whom I will call, John Doe, entered into the following contract with me, viz.: "I hereby agree to take net to me $9,000 net for my 280 acres in Butte county, S. D. Possession and crops all go free if sold before July 1, 1916. If not sold until after July 1, 1916, crops do not go with it, $2,000 (to be cash) and balance five years, semiannual interest. This good from sixty days from date. (Signed) John Doe." About three days after I got this contract, I tried to sell said farm to B who was a new man in the country and wanted a farm and he said he would go and see it. I was the first man who presented the matter to him. Some time later I asked John Doe for an extension of the time, but he did not answer me and later the man B went to see the farm and on the 25th day of August bought it and got his deed for it. John Doe refuses to pay me any commission. Can I collect commission from him by a suit at law?

Answer.—We are of the opinion that you cannot collect commission from John Doe by law. The document set forth above is not a contract to pay commission, nor a contract at all; it is a mere promise by John Doe to take a certain price for his land if sold within sixty days. He does not promise to pay you or anyone else a commission and you are not named in the writing.

Drainage Into Public

A Subscriber, Sherwood, neighbor and I own adjoin and a public road runs alo of both farms. A considera both farms next to the road is low, and overflowed at times by water, so my neighbor and I constructed a ditch on our division line running out to the road, in which there was an old ditch which had run along the road for the last thirty years. We opened up about six rods of this old ditch in the road and run our drainage water into it from our new ditch on the line. The six rods of ditch opened by us in the road conducts the water to a running stream near a bridge. The town authorities object to our outletting our ditch into the road ditch. Have we a right to do so?

Answer.—You and your neighbor have no right to outlet your ditch of drainage water in the public road without the consent of the town authorities. They can prevent you from doing so by law.

ASK NOW — THIS BOOK WILL SET YOU RIGHT ON SEPARATORS

This new book is chock full of cream separator facts. It tells you why I can sell you the best separator ever built at less money than any other cream separator manufacturer or distributor. It tells you the inside secrets of cream separator building and selling. It tells you all about my

FOUR NEW SELLING PLANS, CASH OR TIME

It is full of dairy facts and knowledge. That's why I want you to ask for it today. It tells you HOW I build the New Galloway Sanitary bath-in-oil cream separator right here IN MY OWN FACTORIES in Waterloo. It tells you why cream separators no better are sold for twice and three times as much as I ask for

THE NEW GALLOWAY SANITARY BATH-IN-OIL CREAM SEPARATOR

If you knew all there was to know about building a cream separator and built one for yourself IT WOULD NOT BE A BETTER MACHINE. It would not run any easier, skim any closer, and could not be built of BETTER MATERIAL, no more wear and satisfaction be BUILT INTO IT by skilled workmen. WE BUILD THE QUALITY INTO GALLOWAY SANITARY CREAM SEPARATORS, and you get the service out. That's why we back every one of these machines with a

$25,000 GUARANTEE BANK BOND

Which with the reputation of the Wm. Galloway Company protects you as NO OTHER manufacturer or selling agent of cream separators will do.

90 DAYS' TRIAL ON YOUR FARM

And if you buy it I guarantee it for ten years against flaws or defects in workmanship or material. I WANT YOU TO GET THIS BOOK. It tells the whole story and is free for the asking. In addition I will send you my big fall book of standard quality merchandise. Address

Bee Men to Meet.

The thirty-eighth annual convention of the Wisconsin State Beekeepers' Association will be held in the assembly chamber of the state capitol building, Madison, Wisconsin, December 7th and 8th. The first day, Thursday, will be taken up with reports and other business until the afternoon session when addresses will be delivered as follows:

President Address, N. E. France.
Bee Work at the University, C. H. Aeppler.
Instruction in Apiculture, Mr. Moe.
Extension Work in Beekeeping, E. F. Phillips, Washington, D. C.
Establishing a Trade Name for Honey, E. R. Root.
Election of officers.

Further time will be given on Friday to hear addresses as follows:

Marketing Honey, Edwin Hassinger, Jr., Greenville, Wis.
Better Beekeeping, Mrs. Wm. Haberman, Lodi, Wis.
State Fair, A. L. Klebber, Reedsburg, Wis.
Co-operative Honey Advertising, G. W. Williams, Redkey, Ind.

Will Take Bull Census.

The Wisconsin Live Stock Breeders' Association is attempting to get a bull census in each county in the state. To accomplish this they are interesting secretaries and other officers of community breeders' associations and also the county superintendents of schools. The local cow testers will help where associations are formed.

How many of our readers will see this and then write and tell us how many different kinds of food products they now buy in packages which they used to buy in bulk, or did not buy at all?

We would like to know. If you will take the time to write, it would please us.

In and Around Wisconsin

COMING EVENTS.

Winter Course Wisconsin Dairy School, Madison, Wis., November 8th to February 1st.
International Live Stock Exposition, Chicago, Ill., December 2d to 9th.
Wisconsin Dairymen's Convention, Waupaca, Wis., December 5th to 7th.
Wisconsin Buttermakers' Association, Sparta, Wis., December 5th to 7th.
Wisconsin Beekeepers' Association, Wisconsin State Horticultural Society, at Madison, December 12th, 13th and 14th.
Wisconsin Poultry Association Show, At Madison, January 1st to 5th.
Wisconsin Cheesemakers' Association, at Fond du Lac, January 10th to 12th.
Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

The Oconomowoc Poultry & Pet Stock Association will hold its annual show in the auditorium in Oconomowoc, December 6th-10th. W. H. Stanfield will be the judge.

Reports coming in from the Wyoming valley of Pennsylvania say that the Wisconsin Hollander disease-resistant cabbage has been tried out there and been very successful. The Pennsylvania and truck growers are anxious to secure more seed.

The South-Central Wisconsin Poultry Association will hold its third annual show at Orfordville the week of December 11th-16th. Besides the usual cash prizes, there will be several fine silver cups offered. James Greenwald, of Cedarburg, is to do the judging. Russell Williams is secretary of the association.

Green county is to have its first stretch of concrete road which will connect the city of Monroe with the county farm, a distance of about three miles. The county supervisors appropriated $5,000 in 1914 and have just added another $5,000 and a request has been made for $5,000 from the state highway fund.

There is talk of a $1,000,000 bond issue for good roads in Washington county. The subject of bonds and roads has been discussed at some length in several counties. Outagamie county has already placed a $700,000 bond issue covering a period of ten years. Walworth county is talking of $600,000 to $800,000 in bonds.

The American Society of Agricultural Engineers will meet in Chicago December 27th-29th. Among the Wisconsin men prominent in these proceedings are:

F. M. White, director of agricultural engineering, at the college of agriculture, who is president of the society.
E. R. Jones, chairman of the committee on drainage.
P. S. Rose, associate editor of the American Thresherman, Madison, Wis.
F. N. G. Kranich, Madison Plow Company, Madison, Wis.
W. F. McGregor, superintendent of the experiment department of the J. I. Case Threshing Machine Co., Racine, Wis.

The Wisconsin branch of the American Society of Equity met recently in Fond du Lac. The report of the secretary shows sixty-seven new locals in twenty-one counties of the state. The state branch receipts for the year were $28,332.18 and disbursement $27,841.50. There is talk of increasing the clubs from $3 to $4 a year. One of the most important matters discussed at the convention was the percentage which the farmer actually receives for a dollar's worth of farm products. One of the speakers showed that at present the farmer gets about 44 cents out of every dollar he produces. It was generally agreed that he ought to have at least 60 cents.

In Waukesha county the past year the value of automobiles as shown by the assessor has increased from $475,200 to $637,216. This is on the basis of an average value in 1916 of only $333 per car. This would indicate that there is easily more than a million dollars' worth of automobiles in Waukesha county. While automobiles increased, the number of horses in Waukesha county was reduced from 12,957 in 1915 to 12,453 in 1916. The number of cattle in the country increased in the year from 46,845 to 48,325 and the value in round numbers is $2,000,000. This valuation is on the basis of the assessment and not the real valuation.

There is talk of a $1,000,000 bond issue in Green county for roads. Of course, this would have to be submitted to the taxpayers and the money could not be available by 1917.

Mr. H. C. Stanley, of Wyocena, was discussing the price of potatoes the other day. He remarked that potatoes sold in 1860 for $2.50 a bushel. That is the highest price he has ever paid, but he recently bought a fine lot for this year's use from a grower at Caledonia at $2 a bushel.

Mr. John Imrie, of Roberts, assisted by W. Allsperger, of Sturgeon Bay; O. P. Zeasman, of Madison, and W. L. Houser, of Mondovi, will conduct farmers' institutes as follows: November 21st-24th, Friendship, Niebull, Strongs Prairie; Adams county; Glen Oak, Marquette county; December 19th-22d, Babcock, Wood county; Mather, Juneau county; Valley Junction and Tomah, Monroe county; January 2d-5th, Packwaukee and Endeavor, Marquette county; Bancroft and Coddington, Portage county; January 9th-12th, Camp Douglas, New Lisbon, Necedah, Juneau county; Custer, Portage county; January 23d-26th, Merrilan, City Point, Black River Falls, Millston, Jackson county.

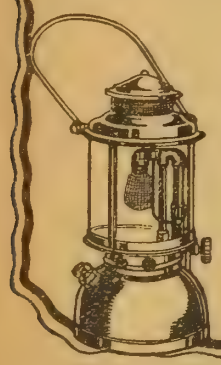
Denatured alcohol and water, mixed half and half, will stand temperatures as low as 32 below zero, and this solution is recommended for the automobile radiator when the car is to be driven in winter. In ordinary weather half or three-quarters of a gallon will keep the water from freezing and alcohol may be added to this mixture until the half-and-half solution is obtained for coldest weather. F. M. White, of the Wisconsin College of Agriculture, writes that glycerine will prevent evaporation, but it is more expensive than alcohol. As alcohol boils at a lower temperature than water the driver of an auto must not worry if the mixture heats quickly when the engine is running.

PORTABLE LAMPS **AMERICAN** DARK CHASERS

Gifts For Father and Mother

Mother will thoroughly enjoy an "American" Portable Lamp. Makes home bright, cheerful and attractive. Lights up every corner of the big living room. Mother will be able to sew or read in comfort for hours at a time without eye strain.

The American Portable Lamp gives ten times more light than a kerosene lamp. Simple, easy to operate. Lights with a match. Carry it anywhere. Tip it over—no danger. Costs one-half cent per hour to run.



AMERICAN DARK CHASER LANTERN

helps father do the chores quicker and easier. Gives twenty times more light than a kerosene lantern. Lights with a match.

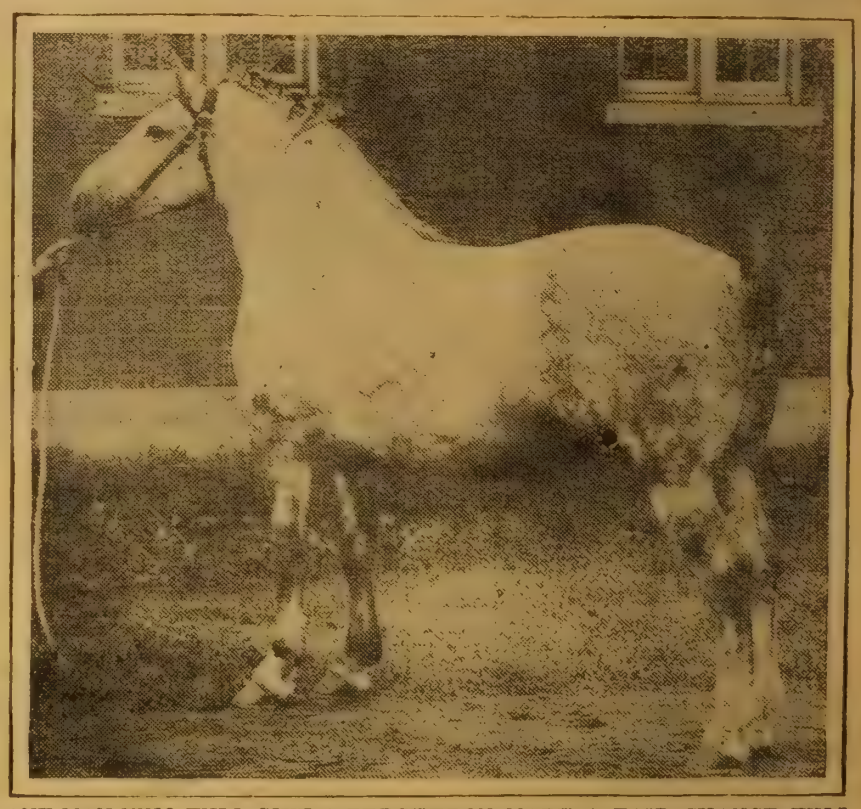
An Ardent Faith in Percherons.

Does All the Farm Work With Pure-Bred Mares and Makes Good Profit From the Sale of His Colts—By George Baker.

I BELIEVE that any farmer who is a reasonably good horseman is making a serious mistake if he doesn't have a pair or two of good Percheron mares. Of course, they cost more to begin with, but with the right kind of care they will soon pay for themselves several times over. They don't eat any more than a grade of the same size and temperament and it doesn't take any more work to take care of them. There is a very marked difference, however, in the selling price of their produce. A good pure-bred colt will bring from $250 to $300 at weaning time, whereas an equally good grade colt will seldom bring more than $100 to $125. You hear a good deal said these days about the horse being a thing of the past and that it no longer pays to raise good horses. Any farmer who advocates such an idea either has the wrong kind of horses or else cares so little about his horses that they are a constant source of trouble to him. If horses are not properly handled, are poorly fed and roughly treated they have little chance to make money for their owner.

There never has been a time in the history of American agriculture when it paid a farmer so well to raise good draft horses. Good draft geldings have been sold right off the farm during the past year for $250 to $350. Even grade weanlings find a ready sale this fall to farmers who see the need of heavy draft horses for farm work. I know a number of farmers who have sold their pure-bred colts right from the teat for $250 to $300. This isn't a very big price, but at the same time that amount is big interest on a $500 to $600 mare. More farmers ought to use Percheron mares. I have a pair of mares, one a nine year old and one a six year old, that I have had about five years. In that time they have raised me eight colts. I have sold two of the colts, one for $900 and the other for $1,000. The other five colts I still own would bring an average of at least $500 apiece. The other colt died. Any farmer who would use this pair of mares properly would make money even if he had to pay $1,500 for them. If I loaned that much money for five years at 5 per cent it would return me $375. In that same length of time the mares raised me two colts that brought $1,900, to say nothing of the five colts I still own. Furthermore, the mares don't owe me a cent for their feed or care, because their work has easily paid for that. I farm with Percheron mares because it pays.



ANY MAN WHO WILL GIVE A PERCHERON MARE A FAIR CHANCE WILL MAKE MONEY OUT OF HER.

A GOOD PURE-BRED MARE REQUIRES NO MORE FEED AND CARE THAN A GRADE.

Baby Beef Show at Madison.

Sauk County Boy Gets First Prize and Short-horn Cup and Sells His Two Calves to Big Breeders For a Good Sum.

BEEF production in Wisconsin has undoubtedly been given a splendid stimulus through the baby beef contest, conducted during the past eight months for boys under the direction of the Wisconsin Live Stock Breeders' Association. The final round-up was held at Madison last week with twenty-two boys showing baby beeves, all of their own feeding and finishing, and the success of the entire undertaking was such that plans are already being made for such a contest next season with another round-up at Madison next November.

The baby beef contest, as it has been termed, was started last spring and held, in connection with various county fairs, all under the direction of the state association. It was required that the county prize winners exhibit at the Madison round-up, to decide the state championship. It was only required that a boy take a steer or heifer on entering the contest, and the final awards were made on the fitness for market, regardless of the cost of finishing. Thirty-seven boys entered forty-seven calves in the state round-up, but only twenty-one showed twenty-six calves, but this was considered especially satisfactory, and it was a fine lot of calves that were led before Mr. J. G. Imboden, of Illinois, who placed the awards. The exhibitors were as follows:

Hereford—A. B. Callin, Mineral Point, one steer; Lee Jewell, Mineral Point, one heifer; Rolland Donovan, Waterloo, one steer and one heifer; C. Emil Fabian, Lake Geneva, two heifers; C. Elwyn Thompson, Lake Geneva, two heifers.

Short-horn—Alvin Morley, Baraboo, one steer and one heifer; Floyd Grosinske, North Freedom, one heifer; Laren E. Husten, Eagle, one steer; Lester Hatch, Lake Geneva, one steer; Rolland B. Webb, Poynette, one heifer; James Hogan, Wannakee, one steer; Geo. W. Smith, Jr., Burnett, one steer; Walter Hartmann, Lodi, two heifers; William Radl, Jr., Lodi, one steer; John McCann, Janesville, one steer; Robert Gray, Milton, one heifer; Will A. Loy, Stitzer, one heifer; Walter Murray, Sugar Bush, one steer; Wendell Kelly, Mineral Point, one steer.

Angus—Wendell Kelly, Mineral Point, one steer; Howard Roser, North Freedom, one heifer and one steer.

Red Polled—Mack H. McClary, Muscoda, two heifers; Rayne Martin, Gotham, one heifer.

First honors went to a pure-bred Short-horn steer, exhibited by Alvin Morley, of Baraboo, who also won fourth place with a pure-bred Short-horn heifer. Both of these animals were later bought by Herr Bros. & Reynolds, of Lodi, at private sale, they paying $150 for the steer and $175 for the heifer. Second prize was awarded to the Short-horn heifer shown by Robert Gray; third to the Hereford heifer shown by Lee Jewell, and fifth to a Hereford steer shown by A. B. Callin. There were fifteen prizes, the other ten finishing in this order: Sixth and ninth, Walter Hartman; seventh and thirteenth, Wendell Kelley; eighth and eleventh, Howard Roser, each with two calves each; tenth. Floyd Grosinske; twelfth Will A. Loy; fourteenth, William Radl, Jr.; and fifteenth, George W. Smith, Jr. The prizes were $50 for first, $40 for second, $30 for third, $25 for fourth, $20 for fifth, $15 for sixth, $125.50 for seventh, $10 for eighth, $7.50 for ninth, $5 for tenth, and $4 each for the next four, with the expenses guaranteed to every exhibitor who did not win enough to cover his expenses. Several special prizes were also awarded. First and second prize winners won $25 additional offered by A. S. Leonard to apply on a trip to the International; a $25 cup was offered by the Wisconsin Short-horn Breeders' Association to the winner, if a Short-horn, and 25 per cent was added to the prize money to wininng steer calves if Short-horns, offered by the American Short-horn Breeders' Association.

FIRST-PRIZE WINNING CALF, SHOWN BY ALVIN MORLEY, OF BARABOO, AND BOUGHT BY HERR BROS. & REYNOLDS FOR $150.

The winning steer shown by Alvin Morley was a splendid individual, and, although he only took second when shown at the Sauk county fair, Alvin was not discouraged. The way he came back was surprising. This steer, being a Short-horn, won for him, in addition to the $50, the Short-horn cup, the bonus of 20 per cent, and $25 on the trip to the International. His heifer that took fourth was also a nice individual, and his experience in feeding and raising these calves is best expressed in his own words, given in the Farm Forum Department of this issue on page 6.

Following the judging there was held a banquet for the boys, at which W. L. Houser, of Mondovi, acted as toastmaster and J. C. Robinson, of Evansville, spoke of the plans for next year. This banquet was followed by an address by Mr. Imboden on baby beef production and was an inspiring talk to the boys. Mr. Imboden is known as one of the best versed men on this subject in the county. A carcass demonstration was conducted by T. G. Paterson, of Madison, in which the desirable points of a beef were pointed out from the butchers' standpoint.

Fourteen head of those exhibited were sold for slaughter purposes, and three were sold at private sale for breeding purposes. Herr Bros. & Reynolds, who bought the Morley calves, also bought the pure-bred Short-horn heifer shown by Floyd Grosinske, paying $175 for this animal.

The Plankington Packing Company, of Milwaukee, bought the fourteen head sold for beef, and the Hereford heifer of Lee Jewell, of Mineral Point, which took third place in the ring, topped the sale at 12 cents a pound. Her total weight was 850 pounds. Wendell Kelley's 955-pound Short-horn steer brought 11½ cents and Howard Roser's Angus steer and heifer, each weighing 760 pounds, also 11½ cents. The low price for these animals was 9 cents, the range being from 9 to 12 cents, and the average for the fourteen head was $10.50 per hundred.

The show was held in the live stock pavilion under the superintendency of George Brainard, and the boys who showed had the time of their lives, as several expressed it.

The engineering department, Wisconsin College of Agriculture, has issued plans for about 100 stump pilers, and this indicates that the Land Clearing Special is bearing fruit. If stump pilers are in demand there must be also a demand for stump pullers, and an increased interest in clearing up cut-over lands.

The strawberry bed may be mulched with clean straw to a depth of about four inches. This will prevent freezing and thawing in the spring.

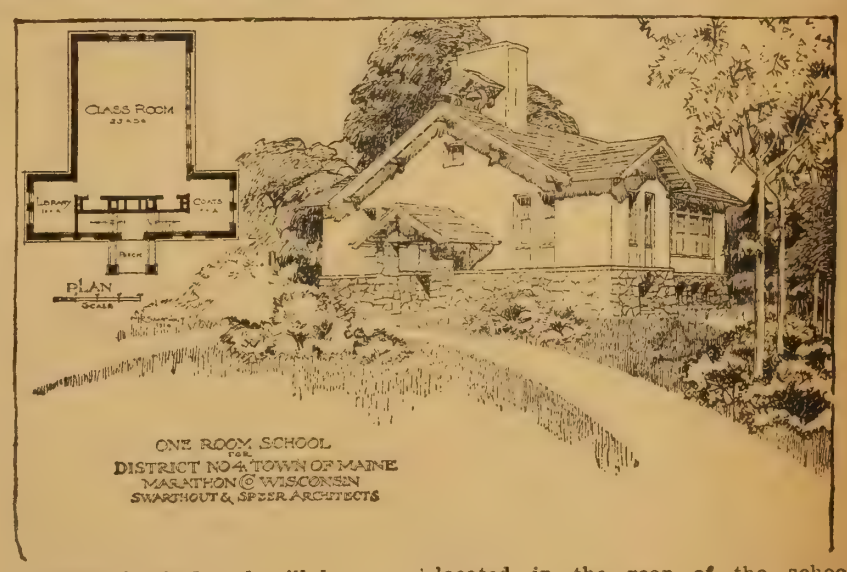
THIRD-PRIZE WINNER, SHOWN BY LEE JEWELL, OF MINERAL POINT, (SEVEN-YEAR-OLD BOY). TOPPED MARKET SALE AT 12 CENTS.

A Modern Schoolhouse.

Town of Maine in Marathon County Expends $5,500 and Has One of the Fanciest Modern Schoolhouses in the State.

NO, THE accompanying picture is not an illustration of a country gentleman's home. It is a rural schoolhouse in Wisconsin, situated in the town of Maine, Marathon county, and we believe this is one of the most attractive one-room school buildings in the state. The illustration was furnished to us by Prof. J. E. Giessel, county superintendent of schools of Marathon county. Professor Giessel has been able to interest the school districts of his county in better buildings.

This school building has sufficient floor space to accommodate fifty pupils. This is more room than is needed for the schoolroom in district No. 4, but it was purposely built large to permit the use of the schoolhouse for social center purposes. This building is just being finished and will be occupied this winter.



The main portion of the building is 27x46 feet, with a wing on either side 10x15 feet in size. One wing is a cloakroom and the other is used as a library. The main classroom is 25x36 feet. The first story floor is six feet above grade with the entrance at grade level and with cement steps leading up to the main floor. A small floor plan of the building is shown in the accompanying illustration. The building is in every sense modern in construction. In the first place, it is practically fireproof. The main classroom is lighted from a battery of windows on the pupils' left-hand side. The walls of the building are of rubble stone masonry up to the first story floor line and the balance of the masonry wall is of hollow tile twelve inches thick, on which exterior and interior plaster is directly applied. The roof is finished with reddish brown asphalt shingles. A pleasing effect is secured by this finish, together with the exterior wood finish stained dark brown, the white plaster and dark gray rubble stone basement wall. With a background of green this modern schoolhouse presents an imposing appearance, well-balanced from every point of view. This is a good example of a combination of good materials and well thought out architectural design.

The conveniences in this modern schoolhouse are strictly up to date. The building is provided with dry closets in the basement. These are ventilated with stack heaters and do away with the annoyance which comes from having toilets housed in outbuildings located in the rear of the school grounds where they are difficult of access in disagreeable weather. In almost every country school in Wisconsin some effort is being made towards the establishment of a library and this design provides a very appropriate place for installing the same.

The contract cost of the building as shown in the accompanying illustration was $5,035. Adding to this the architect's fees, cost of site and improvement of site, the total expenditure is $5,550.

When we asked Professor Giessel whether it is advisable for school districts to spend so much money on a school building he promptly answered in the affirmative. The building is safe, serviceable and artistic and is within the reach of the average Wisconsin farming community.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

The Winter Care of Hens.

To the Editor:—The subject of caring for poultry during the winter months has always been a subject which has taken up the attention of many of our foremost writers upon poultryology. However, the one topic in which we believe much has been neglected is the care of "hens," a care which develops itself into a kind of its own, we would say, a particular care. The reason is obvious. A hen and a pullet are two different subjects. A pullet from her early chickhood has been building up the bodily frame and functions, while it has been in a constant building-up process. On the other hand, the hen has been not only neglecting herself but has been destroying herself, you might say, in the natural functions she has performed, i. e., the production of eggs. She has put out every effort to bring forth a large number of eggs. Some might surmise that this function is a commercial one and she does this for the sake of formality. While in some instances it may be true, nevertheless in the case of our latter-day 300-egg hen it has become a case of man-made birds. Nevertheless, the fact remains true that these functions of laying are those given the fowls for a purpose, and this purpose is reproduction of its own kind. Every animal, whether man or beast, longs to reproduce its own kind and every effort is put forth to achieve this end. It is, therefore, with this object in view that a hen strives to lay her eggs as often as she can in order to beget her kind. When we say "as often as she can" we, of course, do not mean the 300-egg hen, because she is a man-made specie, and, of course, is in a class all her own, but the hen which lays a clutch of eggs and then gets broody and after rearing a family again starts out on another clutch, etc. These hens are the ones that are resting with nature. They have brought forth their young and in that time or period after incubation have been resting up and made amends for the drain upon nature, for you know nature is an exact and precise mother, demands reparation for any drains upon her and something must be done to return to her bodily organs these drains; hence the period when a hen stops laying or goes on strike.

We now will take up the subject of the care of these hens that have worked all spring and summer and late into the fall. These hens are totally "dry," you might say, of eggs, and are wanting some kind of a rest and a time to rebuild their run-down systems. You notice the thin, ragged condition of a hen that is molting? She has the forlorn look of an old, broken-down human being that has been the subject of much toil, hardship, etc. So it is. She is, and has been, that subject in her sphere of life. However, she is striving with nature to rebuild. You realize that the natural period of a hen, as a living being, is only three to four years. True, they are known to have lived up to ten and more years; however, it is only in rare instances this has occurred. The length of time allotted a chicken is about three years. She is short lived, matures quickly, reaches the laying period quickly and if she is going to die of any ailment a chicken ailment takes her quickly. Therefore, she is a specie of quick-live, quick-dead kind. She feathers out quickly and sheds and takes on a new coat of feathers within a few weeks. It is with this consideration in view that she sets out to rebuild her shattered system and goes at it in a systematic manner. She has the real method down pat, if you allow her to have her own natural way, in the country, for instance, where she can pick up every bit of the desired kind of mineral, food and liquid necessary to remake new feathers, new skin, new inside organs, etc. She has this one big advantage over her city sister in this respect. While upon the other hand the city sister of the rural hen has to have every item of this bill of fare of rebuilding her system supplied to her. Hence the difference in advantage.

Again one may help the laying hen with her rebuilding process by a little kindly aid. Some feeds which will help furnish her with the necessary elements to rebuild her bodily needs can be added to her diet. For instance, the addition of oil meal, sunflower seed and corn help to make feathers, furnishing oil, etc. Then the bone elements necessary for the rebuilding of her worn-out limbs, bones of each and every different part of her body are furnished by the lime in the corn, the lime she picks up in the fields, in oyster shells, etc. The elements depleted in her egg-laying organs are replenished by a good, substantial diet of grain, like oats, wheat, corn, etc., and the meat picked up in bogs, meat scraps, etc. All these elements are made natural for her to absorb. We can aid her by giving her plenty of such daily and plenty of good, clean water, lots of room to range in, good, warm quarters, that shelter her from freezing winds. The mere fact that a coop is open fronted is no indication that it is a cold coop. With proper attention she can be kept as warm as she can bodily with no great extra effort upon the part of the keeper. We would, therefore, advise our friends to do their utmost to help their feathered friends along with an extra molting diet, and bring them up to laying conditions again as speedily as possible. For the winter laying hen is the paying hen. She does not take notice of the cold, wintry days like a new laying pullet does and she is not checked by its influence as a pullet is. Plenty of good corn, wheat, oats, grit, oyster shells, meat scraps, fine alfalfa, clover will go a long ways towards this upbuilding process so much needed to bring up the hen to the condition she requires to lay her eggs again in the winter months. Give plenty of care during the cold winter months; see that they get lots to eat, lots to drink, lots of straw and chaff to scratch and dig in, in order to induce exercise and produce eggs.

A hen is very sensitive and will respond to kind treatment with a glad hand, and we assure you that the man that counts the dollars by the cents will realize that he has "sense." If he cares for his feathered friends in a kindly manner she will bring him dollars.

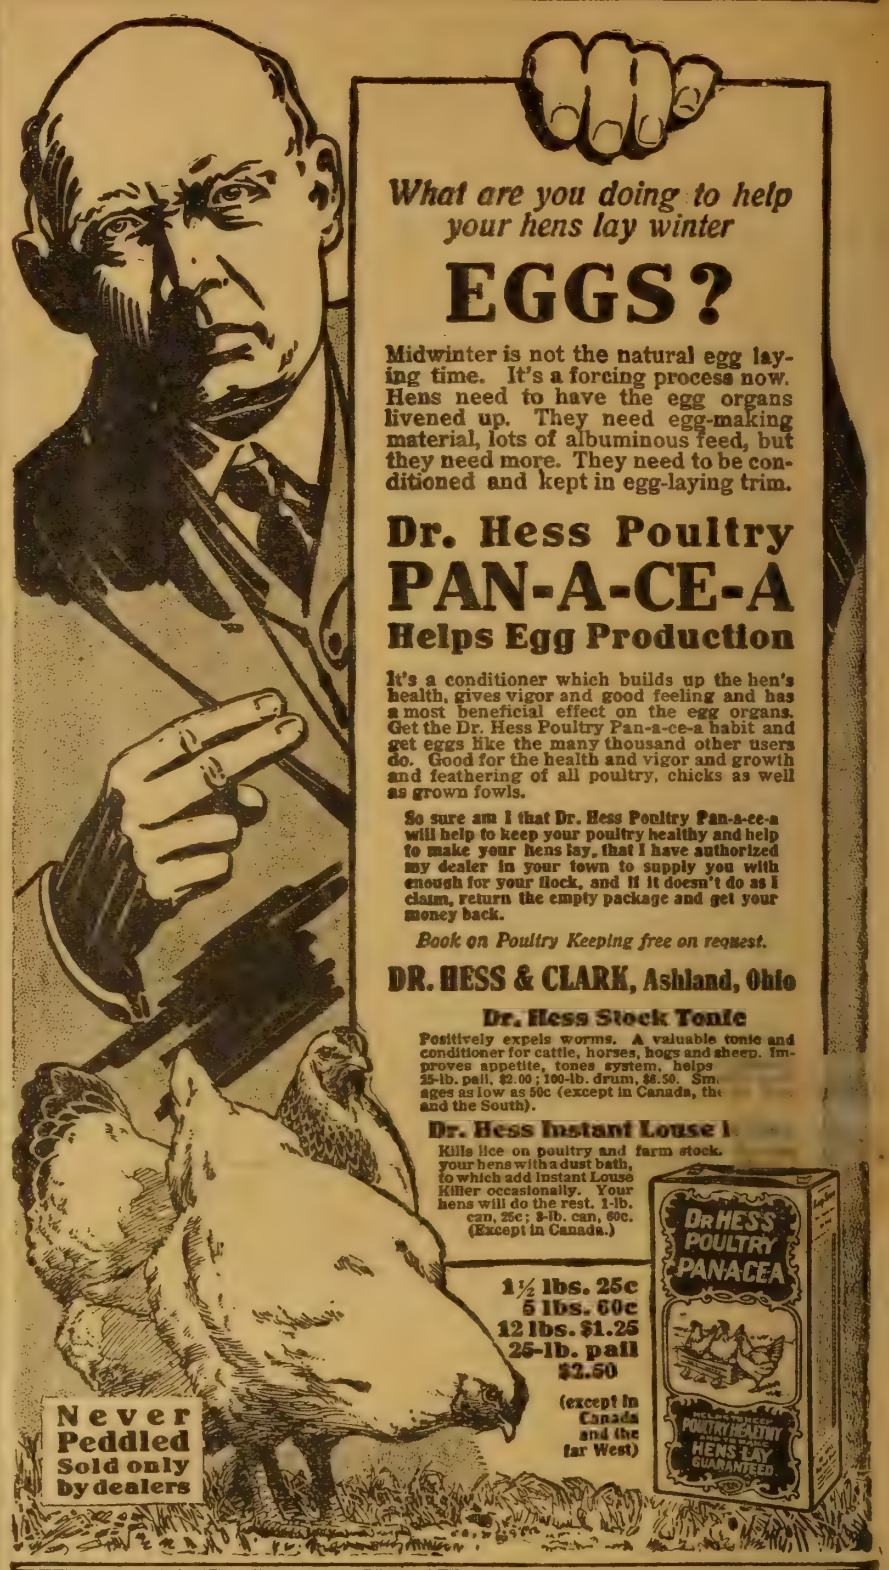
Fond du Lac Co., Wisconsin.

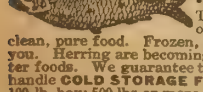


Don't Wear a Truss

BROOKS' APPLIANCE, the modern scientific invention, the wonderful new discovery that relieves rupture will be sent on trial. No obnoxious springs or pads. Has automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lies. Durable, cheap. **Sent on trial to prove it.** Protected by U. S. patents. Catalogue and measure blanks mailed free. Send name and address today.

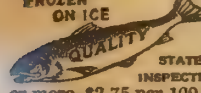
C. E. BROOKS, 339 State Street, Marshall, Mich.

FRESH FROZEN LAKE SUPERIOR HERRING (Commonly called Family Whitefish)



Taken from the ice cold waters of Lake Superior, insuring good, clean, pure food. Frozen, packed and shipped direct to you. Herring are becoming one of the most popular winter foods. We guarantee these **strictly fresh.** We do not handle **COLD STORAGE FISH.** Prices: 100 lbs., $3.50 per 100 lb. box; 500 lbs or more, $3.25 per 100 lb. box; 100 lbs. (in sacks) $3.25 per 100 lbs. (in Minn. only); 500 lbs. or more, $3.00 per 100 lbs. Address Johnson, Hendrickson & Co., Dock I, Two Harbors, Minn.

FRESH WEATHER FROZEN FISH



HERRING, in boxes, $3.50 per 100 lbs.; $2.00, 50 lbs. In lots of 500 lbs. or more, $3.25 per 100 lbs. In sacks, $3.00 per 100 lbs.; $1.60, 50 lbs. In lots of 500 lbs. or more, $2.75 per 100 lbs. (*net weight*). Guaranteed strictly fresh or money refunded. Order your fish early AND SAVE MONEY. We are going to please you. It's been our business for years. Price list on request. PIONEER FISHERIES CO., Dock H, TWO HARBORS, MINN

The Sensible Use of Grit.

Charcoal, grit and oyster shell are fully as important as the dust bath for hens. Even flocks having range will consume large quantities of these materials to advantage, and when the birds are closely confined a supply is absolutely necessary. The usual method is to keep supplies of these materials before the birds at all times, so that they may eat of them at will. Mixing the grit, charcoal and oyster shell with the grain or mash is not advisable, as the birds receive either too little or too much.

Grit should be of a stone that will not become round through rubbing; it should be hard and sharp and wear off like shale, never becoming round and ball-like. Grit made from limestone is not good, as it will grind into little round balls which do not do the work of grinding the feed. Limestone grit supplies some lime, it is true, but it is better to secure the lime through crushed oyster shell.

Charcoal is very important in the poultry ration. It will be found a great help in correcting bowel disorders. Most fowls are very fond of the charcoal and will eat quantities of it. As a usual thing they will consume from two to three times as much charcoal as grit. Heavy feeding of rich feeds to induce egg production is likely to produce some slight bowel disorders, but unless the feeding is radically wrong a supply of charcoal before the fowls all the time will correct these disorders.

Crushed oyster shell is consumed in smaller quantities than either of the other essentials, but is none the less important.

POULTRY AND PET STOCK.

THE WINNEBAGO REDS ARE now in the market. Excellent quality. A standard weight cockerels and pullets. High-class exhibition and common laying stock. Satisfaction guaranteed or no sale. **Winnebago Poultry Yards, R. 23, Omro, Wis.**

HOUNDS: Coon, Fox, Wolf, Deer, and Rabbit Hounds; pedigreed and eligible to reg. Young and old stock for sale. Sent on ten days' trial. Money back guar. Otis Slater & Son, Oconee, Ill., Succes'rs to R. F. Johnson, Assumption, Ill.

"ARISTOCRAT" Silver Wyandottes. Cocks, cockerels, hens and pullets. Better than ever. Write me your wants. Frank Faha, Jr., Box 620, Dyersville, Iowa.

BABY CHICKS and eggs from trap nested, pedigreed Barred Rocks and S.C. White Leghorns with wonderful egg records. Write for circular to Amos G. Norman, Dept. D, Chatsworth, Illinois.

HATCHING EGGS; prize-winning S.C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W.F., Fond du Lac, Wis.

TURKEYS WE BUY 'EM. Write us what you have. THE R. E. COBB CO. 26 E. 3d St., St. Paul, Minn.

HATCHING EGGS; S. C. Reds, prize-winners all leading shows. Eggs $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

BREEDERS Cheap, all varieties chickens, ducks, geese, turkeys, bantams and guineas. Also incubator eggs. Bare Poultry Co., Box 650, Hampton, Iowa.

SINGLE COMB BUFF AND WHITE Leghorn cock'els. Charles Schmit, Hortonville, Wis.

WHITE and Barred Rocks from prize-winning stock. Yearling hens and males. Early pullets and cock'ls. Mrs. J. F. Bloom, R. 1, Stillwater, Minn.

FIFTY varieties chickens, ducks, geese, turkeys, guineas. Low prices to make room. Catalog free. Dell Walrath, Box S, Janesville, Minn.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorosen, Shell Lake, Wisconsin.

DAIRY

Profit in Caring For the Calves.

A great deal of care and attention must be given calves during the first six months, if they are to be reared successfully, says H. H. Kildee, of the Minnesota Experiment Station. But such care is well warranted and is highly paid for by the greater number of calves saved from the ravages of scours and other diseases and by their better quality when they mature.

To guard against navel infection, which so frequently causes the death of calves, the following method has proved to be very efficient.

Draw liquid from navel cord as soon as calf is born.

Apply tincture of iodine liberally to cord, both internally and externally.

Dust compound alum powder on the cord every few hours for one day.

Whether the young calf should be left with the cow for a few days or be taken away immediately is a question on which practical dairymen are not agreed. In most cases it is the practice to leave the calf and cow together for two or three days, so that the calf may secure the first milk, or colostrum, at the normal temperature which is quite essential in starting the digestive system properly. Then, too, the calf assists in relieving the inflammation in the cow's udder at this time.

For the first three weeks after the calf is taken from the dam it should be fed from two to three and one half pounds of whole milk three times a day. Care should be taken to feed this milk at body heat after it is drawn and before it becomes cool. When the calf is three weeks of age it must be fed twice a day and skim milk can gradually and slowly substituted for a like amount of whole milk. Three more weeks should be used in getting the calf onto a whole ration of skim milk. When it reaches the age of six weeks it should be receiving from twelve to sixteen pounds of warm milk a day. Great care should be taken not to overfeed the calf with milk, as more calves are injured by overfeeding than by underfeeding.

The Open Shed For Dairy Cows.

The open shed is finding favor among progressive farmers and dairymen as the proper method of winter shelter. Their belief is founded upon four things: Disease, accident, logic and experience. Experience is the farmer's test for all things and the several years that the open shed shelter has been in brought down the balance heavily on the side of the open shed.

In the two decades just past the scourge of tuberculosis has been prevalent in all dairy districts. Tuberculosis is a germ disease. Germs thrive in darkness, in dampness, in filthiness and where fresh air is lacking. In all farms it has been a constant warfare to fight down those three conditions. Naturally in fighting tuberculosis practical, hard-headed men sought to provide conditions wherein the damp, the dark and the filthy would be avoided and where fresh air would be provided in abundance. Someone thought of the open shed that was giving such splendid results for the steer feeders. This idea was tried out and found to be good. Cows were found to be more healthy. While some men were putting in large windows and increasing the size of air shafts the more radical were using the open shed with fresh air and sunlight in abundance. An experiment station tried out the idea and reported satisfactory results.

Dairymen who were enlarging their herds sometimes found that they had insufficient stall shelter. In the emergency, as they considered it, they turned some of the cows to the shelter of an open shed. To their surprise the ones in the open shed did better and apparently were in better health and were more contented than the ones in the barn which were supposed to be more favored.

The experience of one typical of those who learned from accident that the open shed is most desirable is as follows: He turned three or four newly purchased cows into a back shed expecting but little of them during the winter. Much to his surprise those cows kept up their milk flow and were always more contented and less subject to indisposition of any sort. The owner, quick to put into practice a good idea, even though it might be comparatively new, built a long shed almost of horseshoe shape, leaving a large open interior court and with the open part of the horseshoe opposite the prevailing wind. His results were eminently satisfactory.

During the second or third winter his open shed plan was put to a very severe test. There had been no cold weather until January. Then overnight the temperature went to 16 degrees below zero. His cows dropped off less in the amount of milk flow than did those in a neighbor's barn where the cows had been housed regularly and had been made delicately sensitive to all changes in the weather. The idea was shown to be good and has been largely adopted.

The advantages as found for the open shed are that it is more healthful for the cows. It is cheaper. The cows are cared for with less labor. The cows are cleaner. Cleaner milk is secured. It has been found advisable to build a small milking room in conjunction with the open shed. In this room a few of the cows may be milked and turned into another section of the yard and others put in for milking. Men who have built large barns to hold the entire herd are using them at milking time, but for the one just establishing his dairy he will find it more economical to build the open shed and a small milking room.

Our readers frequently write and ask where they can buy some product that they need. If your local dealer or merchant cannot supply you, tell us his name and address—maybe we can be helpful to you and to him. We are here to serve both of you.

Importance of Clean Stripping.

What is the reason for clean stripping being of so much importance in the process of milking? The udder of a cow, composed of a solid mass of glandular substance separated into cells or divisions, is divided into two parts by a membrane from the front to the back, making two distinct halves. These halves are not divided and yet the front and back part are distinct from each other, each quarter being connected with the teat which belongs to it by the small cells or divisions.

The upper part of the udder is made up wholly of fat, while the lower part has very little fat. Consequently with this structure the udder is not a simple reservoir of milk. The udder, in fact, can hold very little milk, the combined spaces or ducts in it are found to be insufficient to hold half a pint of milk, even in a cow giving several quarts at a milking. The milk, therefore, is produced in the udder as the milking proceeds and the cow may prevent the flow of milk by repressing this action.

The giving of the milk is a voluntary act of the cow and as she lets it down the milk flows from the cells of the udder into the passage leading into the teats. Necessarily the milk from the upper part of the udder can only come down and the glandular substance in this part of the udder being mostly fat which is mingled with the serum or milky fluid that escapes from the glands by a change of the substance into milk. Thus the richness of the strippings is accounted for and the necessity demonstrated for every possible drop of milk being obtained in the strippings, because the failure to do clean stripping not only results in a loss of the richest of the milk but also acts injuriously against the cow in subsequent milkings.

To Make Buttermilk From Skim Milk.

Buttermilk is at a premium these days, and so great is the demand that it is cutting some figure in the matter of selling cream or making butter. The writer knows exactly how much less labor there is in selling cream, instead of making butter, and is ever on the alert in favor of the former.

According to the Missouri College of Agriculture, buttermilk can be made from separated milk by keeping it at a temperature of 68 to 70 degrees Fahrenheit for from eighteen to twenty-four hours, or until it has formed a smooth curd. As soon as the milk thickens, it should be churned thoroughly for about a half an hour, until the curd is broken up into fine particles.

Separated milk does not make buttermilk with just as good flavor as when skimmed by hand, because there is no butter fat left in it. This is a score for the separator though, and the deficiency can be remedied by adding a per cent of whole milk to the skim milk to be churned; about one pound of whole milk to eight of the other.

Buttermilk is a healthy, nourishing and nutritious drink, and is a valuable by-product in the dairy. It is being sold over the confectioner's counter, and is a stanch rival to the drinks being sold with a string of lingo to their names. The demand cannot be supplied, and when we wish to do a town friend a favor, we know what to do; take a jug of buttermilk, fresh from the churn, chill it, and take it to town, dressed in the garb of a burlap sack soaked in cold water.

Once there was on record a case of buttermilk killing a chicken-eating hog. Or rather, it was a combination of buttermilk and pig weeds.

Watch the potato bin carefully for decaying tubers. Some fields contained a good many decaying tubers this autumn.

GET YOUR
DE LAVAL
NOW

IF you are selling cream or making butter, and have no separator, or are using an inferior or half worn-out machine, you are wasting cream every day you delay the purchase of a De Laval.

You can't afford to wait until next spring. It means too much loss. Let the De Laval start saving cream for you right now, and it will soon pay for itself.

See the nearest De Laval agent right away and let him show you what the De Laval will do for you. If you do not know the De Laval agent, write direct for any desired information.

Cow-Testing Reports.

Waupaca and Butternut Ridge.

To the Editor:—Owing to our short list of forty-pound cows in September, the list was not sent in for publication, so both September and October are included herewith. Cows are beginning to freshen now and these reports will begin to look better. I had twenty in the forty-pound class in October and fourteen in September. I am enclosing a picture of the horse and wagon with which I make the trip from farm to farm. I am anxious to see as many of our official cow testers and farmers interested in dairying as

Geo. L. Moss, cow tester, Waupaca county, travels from farm to farm in this rig. His association has thirty members, 480 cows, and the tester is on the job twenty-seven days a month.

can possibly come at the Dairymen's State Convention to be held in Waupaca, December 5th to 7th.

The following table gives the names and records of the cows in Waupaca and Butternut Ridge Association producing more than forty-five pounds of butter fat in the thirty-day period ending October 1, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Fred S. Jorgensen					
Jessie, G. H.	10	4-17-16	1243	3.7	46.0
E. F. Schroeder					
Beauty, G. J.	10	5-24-16	769	6.0	46.1
Nig, N.	4	4-10-16	1004	4.8	48.2
E. O. Frihart					
Brownie, G. G.	6	3-28-16	952	5.7	53.4
C. A. Peterson & G. R. Miller					
Marnas, R. G.	8	1-15-16	905	7.2	66.1
Golden Lady, R. G.	9	6-7-16	1031	4.4	45.4

The following is a similar report for the thirty-day period ending November 1, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of milk	Pounds B. fat
Fred Jorgensen					
Jessie, G. H.	10	4-17-16	978	4.8	46.9
E. L. Schroeder					
Ethel, G. G.	2	8-17-16	888	5.3	47.1
John C. Backes					
Spot, G. G.	6	10-3-16	972	5.9	57.3
Theo. A. Bauer

Marnas, R. G.	8	1-15-16	812	5.6	45.5
Golden Tidy, R. G.	9	6-7-16	1113	4.4	49.0

Geo. L. Moss, Official Tester.
Wm. Kneip, Secretary.

Winnebago's Yearly Report.

To the Editor:—The Winnebago County Cow-Testing Association ended its first year of work October 31, 1916. The annual meeting was held October 28th in the Webster manual training building in Omro. The treasury showed a gain of $34.34. Mr. W. P. Bussey was re-elected president; N. A. Rasmussen, vice president; Levi Brunson, secretary and treasurer. The directors for the coming year are: Ganem Washburn, E. E. Mackie, T. A. Fanow, G. W. Searles, Archibald R. House, who continues as tester.

All the farmers were well pleased with the productions of their herd and are going to better it this coming year. A large number of the farmers found it more profitable to feed a balanced ration than to feed the guessing way. Throughout the association the cows are in a better condition to produce this year than last. Out of the entire number of cows tested sixty-two went to the stockyards. Our best cow produced 9,575 pounds of milk, testing 5.02; making 481.4 pounds of butter fat valued at $159.45. She consumed $49.98 worth of feed, making a profit of $109.47. She returned $3.19 for every dollar's worth of feed. She is owned by H. R. Mosely, Omro, Wisconsin.

The second highest is a grade Guernsey owned by C. H. Slayton. She produced 8,327 pounds of milk, testing 5.76, making 480.3 pounds of butter fat, valued at $166.62. She consumed $53.08 worth of feed, leaving a profit of $107.54, returning $3.02 for every dollar in feed.

The third highest was the largest milk produced. She is a pure-bred Holstein and is owned by M. L. DeVoin. She produced 12,823 pounds of milk, testing 3.37, making 432.4 pounds of butter fat, valued at $145.37. She consumed $61.36 worth of feed, leaving a profit of $84.01, returning $2.36 for every dollar in feed.

Following are the twelve highest butter fat producers:

H. R. Moseley, G. G.	481.4
C. H. Slayton, G. G.	480.3
M. L. DeUoin, P. B. H.	432.4
M. C. Mackie, G. D.	429.6
N. A. Rasmussen, P. B. G.	420.5
Tenant Bros., P. B. G.	406.5
Levi Brunson, G. J.	406.0
Ray Ward, G. G.	405.2
T. A. Farrow, G. G.	404.8
H. P. Zellman, P. B. J.	387.0
A. C. Marshall, Native	384.3
G. E. Washburn, G. J.	381.1

Following are seven herds having highest average fat production:

H. R. Mosely	357.5
L. E. Brunson	342.0
Tenant Bros.	333.2
G. E. Washburn	319.6
J. J. Shrig	316.2
N. A. Rasmussen	307.3
C. H. Slayton	306.9

Following are the herds having cows over 300 pounds:

	No. of cows
G. E. Washburn, G. & P. B. J.	15
Tenant Bros., G. J.	11
H. R. Mosely, G. & P. B. G.	11

A. R. House,
Official Tester, Winnebago County Cow-Testing Association.

Not Scared at Feed Price.

To the Editor:—The following is a summary of the work done by the Alban and New Hope Cow-Testing Association, Rosholt, Wisconsin, for the thirty-day period ending November 10, 1916. During this time we have found five "boarder" cows, all of which have been sold and which would have been fed at a loss to their owners all through the winter had they not been tested. One pure-bred sire has been bought to replace an inferior sire. Ten dairy cows have been purchased by four of our members.

This goes to show that our people are not scared of the present high prices of feed. All they need to do is to get the right kind of dairy animals. For the past month we had twenty-one cows producing over forty pounds of butter fat. This is some improvement over last month, when we had only eleven in this list.

The cows in our association which produced forty-five pounds of butter fat or 800 pounds of milk during the thirty-day period ending November 10, 1916, are as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Otto Halvorson					
Beauty, N.	7	5-19-16	1162	4.6	53.5
C. E. Ericksen					
Whiteface, G.G.	8	3-26-16	941	5.3	52.7
J. P. Madsen					
Bessie, G. G.	6	9-17-16	1054	5.0	52.7
Susie, G. G.	7	9-29-16	1054	4.8	50.6
Sadie, G. G.	5	10-6-16	927	5.3	49.1
Alfred Brekke					
Whity, G. H.	8	9-21-16	1361	3.5	47.6
M. J. Wrolstad					
Gr. Guern.	9	6-28-16	868	5.4	46.9
Norman Dahlen					
Native	3	10-9-16	920	5.1	46.9
Tom Olson					
Gr. Hol.	8	7-29-16	1290	3.6	46.4
Native	4	8-12-16	884	5.2	46.0
Gr. Guern.	4	9-14-16	1079	4.3	46.4
Gunder Dobie					
Native	8	8-22-16	1185	3.9	46.2

M. E. Smith, Official Tester.
M. J. Wrolstad, Secretary.

Geneva Association.

The following table is a list of the cows producing forty-five pounds of butter fat or over for a period of thirty days ending October 31st:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Dallas Davis					
Hartog, R. H.	7	10-1-16	1395	4.2	58.6
Wm. Rouse					
Rosie W., G. H.	5	9-20-16	1259	4.3	54.1
Emil Papenfus					
Blossom, G. H.	4	9-25-16	1169	4.5	52.6
Nigger, G. H.	4	9-27-16	1287	3.8	48.9
Kittie, G. H.	4	9-22-16	1008	4.8	48.4
Dallas Davis					
Pansy, G. H.	7	10-1-16	1569	3.0	47.1
Ora Taylor					
Dora, R. J.	7	9-6-16	719	6.5	46.7

F. W. Drake,
Official Tester, Geneva Cow-Testing Association.

Will you let us send you this Grand Collection of 22 Winter Blooming Bulbs at our expense? See offer below.

MOST people like to have flowers growing and blooming in the house during the winter months. In this special offering we have had our nurseries make up a collection of extra large bulbs in a great assortment of colors and especially selected of varieties that will grow and blossom freely indoors. Simple directions for potting and culture will be sent with the bulbs so that you can easily make a big show with them. The bright flowers will make your rooms more cheerful and the perfume from them will go all over the house.

The bulbs can be planted in pots as in illustration, or in any other dishes you may have in the house. They will commence to blossom in about 60 days after being brought into the warm rooms.

Just read our offer, fill out the coupon and mail to us at once, and we will have our nurseries send you the 22 fine *Winter Blooming Bulbs* by next parcel post. Right now is the proper time to get them started for indoor blooming.

BEAUTIFUL XMAS SURPRISE PACKAGE FREE

Solve This Puzzle

Here are seven sheep in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this we will send you as a prize, a Christmas surprise package, containing 42 assorted pieces of beautiful Christmas cards, seals, tags and stickers. This is one of the most artistic Christmas packages put out. We will also send a certificate of entry in our grand contest for a $395 Saxon Automobile. All you have to do is to enclose 2 two cent stamps in your letter to pay postage and cost of mailing.

Saxon Car Given Away

Remember the Saxon car will absolutely be given away at the close of the grand contest. In case of a tie a Saxon car will be given to each person so tied. Send at once so you can be entered in this great contest. Full particulars by return mail.

Fruits and Garden

On Beekeeping in Wisconsin.

To the Editor:—Should Wisconsin farmers keep bees? Much depends on the farmer, his location and his condition. There are some of us who would keep bees simply for the pleasure there is in it and the delightful and most wholesome of all sweets, even if there was no revenue or profit in it. As to the profit in beekeeping. There are, of course, some who keep bees and others whom the bees keep. In other words, there are some beekeepers who find it profitable and others who do not, but the last statement is also true of all other lines of farming. I live in a dairy section where the Swiss cheese industry predominates. Not many keep sheep, because they say it doesn't pay. Now I do not believe this and my experience with sheep refutes this idea. Fads and fancies affect most of us and those of us who are not affected are indirectly influenced. I would not farm without sheep, but the neighbors around here do not see it in that way. (Again I spoke of the pleasure in keeping bees, but there are persons who think it is anything but fun to get stung. (This expression has a literal as well as figurative meaning.)

The question is best settled by ascertaining who in the family is interested to the extent they would care to read up and become somewhat posted. Then an occasional visit to an experienced beekeeper will suggest many new ideas and ways of doing things. The key to success may be briefly summed up in this way: To do the right thing at the right time, and much might be written as to the fun of it. Especially is comb honey production really a fine art. To do the right thing at the right time you will wish to become a botanist and nature student and there is no bigger fun than that, but the beginner about this time may be especially interested in proper wintering. To begin with, I better state that I have followed largely the method of cellar wintering. For this I shall give a few reasons. First, however, let me state that until recently the idea was general that the bees sort of hibernated during winter, but some recent experiments carried on at Washington has revolutionized this idea. About two years ago Dr. Phillips read papers before most beekeepers' associations on Washington experiments in wintering bees. Dr. Phillips maintained that bees do not hibernate. While different methods of outdoor wintering has been practiced, the idea in general was that bees hibernated. The idea now for outdoor wintering is based on the idea of some cover protection to keep cold out and conserve the heat of colony. A double wall arrangement with a dead air space in which sawdust or dry leaves is filled in. Then a strong colony with plenty of good stores generally winters all right, but I stated that my method was to winter the bees in cellar, and this I believe to be the best. I had better give some reasons: First, if bees do not hibernate a uniform temperature is the main thing to be sought. For this purpose a good cellar is no doubt the best. Especially is this an important point in this climate where the temperature changes so rapidly. Then if there is any excuse in the fine barns and houses of protection for our live stock the same logic applies to our bees. As to food and shelter, the bees deserve the same consideration as does our other live stock. Here it is a question of the conservation of heat and stores. It is true that an animal fat and in good shape with plenty of food will endure our hard winters and inclement weather, but we think protection better.

Any further discussion on this subject may not be in place here. The recent numbers of Gleanings and American Bee Journal have extensively illustrated articles on the subject of outdoor wintering. An argument that I have seen repeatedly given is that outdoor colonies will commence to breed up earlier. I suppose this argument is true, but still I should wish to be cautious until we know more about it. The warm spring sun frequently induces bees to come out simply to be chilled. The spring problem with me is rather to keep the bees quiet until warm, settled weather arrives about soft maple bloom.

For farms that only have a few colonies and have no special cellar arrangement for them I would suggest that bees could be placed in a dark corner and a canvass or blanket be hung around and over them. The idea being to keep the bees in a dark place, as you cannot successfully shut up or imprison bees. H. H. Moe.

Green Co., Wisconsin.

Ailing Animals.

Blackleg Vaccine.

Would you please inform me through your valuable paper whether or not blackleg vaccine, in pellet form, loses its strength or effectiveness when you have it on hand for some little time. Some dealers keep it in stock and it probably has been on their shelves indefinitely. Would this be all right to use and would it be as effective as if obtained directly from factory?

There is a time limit for the use of this vaccine and this should be so stated on the box or bottle. It should not be used after return date.

Paralysis.

I have a fifteen-year-old mare that seemed to get lame in one hind leg and then staggered. Finally she got so she could not move any of her limbs, but seemed to want to eat. She has been that way for three days. Everything else seems to be all right. We have not given her any medicine. She is now so weak that she cannot move her head.

If your animal was as bad as you state she is probably beyond all help by now. She probably has become paralyzed from some cause or other. We would not be able to give cause or nature of trouble without an examination.

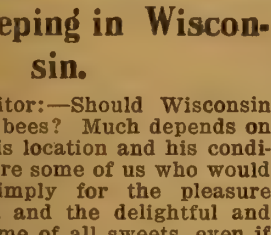
Scratches.

Please tell me how to cure scratches. One of my horses I believe has scratches. His hind feet crack and get sore when he gets mud on them. They swell up when he stands overnight. I have been using lard.

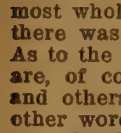
Most cases of scratches will yield to a daily application of tincture of iodine for a while and then every other day. The fetlock should always be well cleaned with a dry brush before applying iodine. If this does not cure, dry clean the parts and use an ointment composed of one-half of gray mercurial ointment and vaseline. This should be applied by rubbing well into the parts and then with a soft rag rub off all excess so dust will not gather.

CHIEF SUNSHINE Hog House Windows

Used and recommended by the most successful, practical farmers and hog raisers. Modern roof windows, scientifically designed, admit sunshine direct on pen floors. Made of galvanized steel, rot-proof and rust-proof. Cannot leak or warp. Will not blow off. Glass held by clips, no putty used. Easy to install in any hog house—old or new. Sunshine means hog health, faster growth, more "hog money" for you.



4 Blue Prints of Up-to-Date Hog Houses FREE



Complete blue prints of up-to-date hog houses furnished you, FREE. Full details and specifications showing all modern features. Write for them. Ask about CHIEF VENTILATING WINDOWS which admit air without drafts.

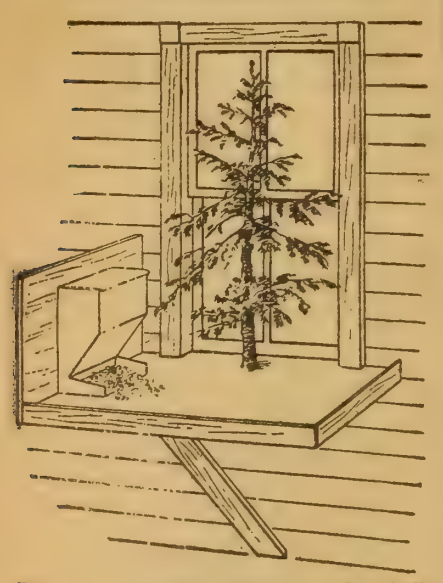
Feeding Winter Birds.

Those who enjoy the companionship of the wild birds should remember that an ample food supply is the most important means of attracting and keeping about the place those which remain with us during the winter months. During this season the natural food supply is necessarily limited and birds respond readily to such attention.

The list of winter foods is long and the means of making it available for the birds varied. Suet, pork rinds, bones with shreds of meat and pieces of cooked meats tied to the limbs of trees will prove a source of delight to the feathered pets and, if placed within sight of the house, to the family itself, particularly the children. Before the ground is covered with snow the practice of daily throwing out a handful of bread crumbs, cracked corn or wheat will always bring eager banqueters. Birds having once been attracted in this way will greatly miss their daily ration when snow and ice arrive and this mode of feeding is impossible.

But the birds need not go hungry, for there are many devices for protecting the food from the weather, and they are so simple that even a twelve-year-old boy can make them. A coconut shell with a hole bored in one end is a good example. The cavity is filled with chopped suet and nuts or other food mixture and the nut is suspended by a wire from a limb. The size of the hole regulates the character of the guests. If the hole is small large birds cannot enter. They will eat the coconut meat as well as



FOOD TRAY SHELTERED BY EVERGREEN BOUGHS.

the food mixture placed within. There are any number of foods that may be used for the mixture. The list includes cut-up apples, birdseed, buckwheat, crackers, cracked corn, bread crumbs, hemp seed, millet, nut meats of all kinds, whole or rolled oats, peppers, popcorn, pumpkin or squash seeds, raw or boiled rice, sunflower seeds and wheat. Cans with small openings may be used instead of coconuts, or baskets of different sizes may be made of wire netting and fastened to a tree, or, with less trouble still, food mixtures in melted fat may be poured into holes in limbs of trees or over evergreen branches.

Illustrations of two food trays are given herewith. One is mounted on a pole and may be placed near a window or at any desired point about the place. The raised ledge about the edge and the evergreen branches used as a canopy shield the food against wind and rain and snow, and added protection may be afforded if the tray is placed in the shelter of a wall. A shelf placed next the house beneath a window may be provided with a tiny evergreen tree and a food box which may be filled with any desired food and will supply the bird guests for many days without refilling.

More elaborate devices may be made in the form of food hoppers and

FOOD SHELF PROTECTED FROM WIND AND STORM.

food houses provided with solid roofs and with glass on one or more sides. In these the food is perfectly sheltered from the weather, but the simple contrivances here illustrated are very effective.

Sauerkraut.

Sauerkraut does not ripen thoroughly in less than two months and, therefore, it should be made as early in the winter as possible. Fifteen heads of cabbage make about the right amount for home use. Good, firm heads should be selected and shredded as for slaw, though not quite so fine. Line the bottom of an earthen crock in which the kraut is to be made with large, clean cabbage leaves. Then put in a layer of the shredded cabbage to the depth of one inch. Sprinkle this with salt. It will require about two or three teaspoonfuls of salt. Mash the cabbage with a wooden masher until the juice runs out. Continue this process, alternating the cabbage and the salt until the cabbage is all used up. Each layer of cabbage should be sprinkled with the same amount of salt and mashed well. Lay more clean cabbage leaves over the top and cover with a clean white cloth and a plate turned upside down, fitted into the crock. Put a weight on the plate to keep it down. Set the jar in a cool place in the cellar for the kraut to ripen.

Wants Christmas Ideas.

To the Editor:—I have been an interested reader of this paper for some time and I have decided to write a few lines myself in answer to the request of Mrs. S. H. for good pancake recipes. We have them quite often for breakfast and think them good. Soak a couple of slices of dry bread overnight, or a few minutes in the morning, just so they are soft. Then pour off the cold water and crush the bread fine. Add one egg, a pinch of salt, one cupful of buttermilk or sour milk to which one level teaspoonful of soda has been added, a scant half cupful of corn meal and three-fourths of a cupful of flour. Beat thoroughly and bake a nice brown on a well-greased griddle. I use a tin or granite cup for measuring the milk, meal and flour, and I soak the bread in cold water. We never have scraps of dry bread to waste. If one uses too much bread it will make the cakes sticky. I hope someone will try this recipe and like the cakes as well as we do. I never like soggy cakes of any kind and these are never soggy.

As it is nearing Christmas I wonder if some of the readers could tell us how to make some little inexpensive gifts that are dainty and pretty. Where one has lots of friends they like to remember at Christmas time it takes so much to get each one a little remembrance, and, besides, it is not nearly so nice oftentimes as some homemade article such as dainty aprons, pin cushions, pin holders, guest or bath towels with crocheted lace, or doilies. If anyone has something new, please pass it on. Give us some new ideas and tell us how to make the same pretty things you are making and we will be very grateful.

Maggie.

Interested in Orval.

To the Editor:—This is my first attempt at writing to your paper, but I enjoy reading the many other letters published. The one from little Orval in Wyoming interested me in particular, for I am a widow with one child, a boy about nine years old. I am very poorly most of the time, so want to try to teach my boy to cook and be my helper and he seems just as anxious to help me as I am to have him. He goes to school every day. Well, Orval, here is a recipe for baking powder biscuits. To half a sifter full of flour add one and one-half teaspoonfuls of baking powder and a scant teaspoonful of salt. Sift together, then take one heaping tablespoonful of lard and mix thoroughly with the flour. Use just enough sweet milk or water to mix this to a soft dough. Roll half an inch thick and bake seven minutes in a hot oven.

Here is another recipe that is splendid and so simple I think a little boy can easily make it. It is for nut ginger bread. One cupful of molasses, one cupful of sour milk, one cupful of lard or butter, two eggs, one cupful of sugar, five cupfuls of flour, one teaspoonful of baking soda, one tablespoonful of grated nutmeg, one cupful of any kind of nut meats, chopped fine. Add nuts and flour last.

Mrs. Brownie Jones.

Treatment of Plants For Lice.

To the Editor:—In answer to Ruth's request for a remedy for lice on house plants I am sending the following: Fill a basin with strong, clean soapsuds. Turn the plant upside down, watching so the earth does not fall from around the plant, and rinse the top, swaying gently back and forth through the suds until the lice disappear. Then sprinkle tobacco around the plant. Repeat the washing process whenever lice make their appearance. I have tried this on my plants and it freed them from lice. The suds won't hurt the plants. Mrs. F. F.

Will "B. M." Write Again?

To the Editor:—I wish you would ask "B. M." to give us more fully the directions for the yoke pattern printed in a recent issue. She says "chain 20 to start. 1st row, join in third stitch from needle to form picot, 4 tr. 2 ch. 4 tr. 2 ch. turn." Now she does not say whether to miss any stitches and put this along on the chain of twenty or not, and I would like very much to have her explain. Also, is the yoke round or square and which is the top and which the bottom? How do you make the shoulder strap and the back? Are they made separately and sewed into place or are they crocheted right onto the front? Please, B. M., won't you help me out? I love to crochet and I want to make this yoke if you will just explain it a little further.

M. W. F.

Recipes.

Peanut Brittle.—One cupful of sugar, one-half to three-fourths cupful shelled peanuts. Chop the peanuts. Heat the sugar in a frying pan. When melted add the peanuts, mixing them thoroughly. Spread on a platter or a tin baking sheet and press into shape with a knife. Cut into squares and when cool break into pieces.

Fruit Cake.—One cupful granulated sugar, one-half cupful lard, two eggs, saltspoonful salt, one teaspoonful baking soda, one tablespoonful vinegar, one-third cupful preserved citron (cut fine), one-third cupful orange peel (cut fine), one-third cupful lemon peel (cut fine), one teaspoonful each ground cinnamon, cloves, allspice and ginger, one and one-half cupful water, one pint sifted flour, one cupful nutmeats, one cupful seedless raisins, one cupful currants. Cream together sugar with lard, add well beaten eggs, salt, ground cinnamon, cloves, allspice and ginger, molasses, milk or water, baking soda dissolved in the vinegar, flour, nutmeats, raisins, currants, citron, orange and lemon peel. Then add enough more flour to make the batter thick. Beat well. Bake in loaf tins in moderate oven abou one hour or until it falls away from sides of pan.

Cabbage Salad.—Shred cabbage very fine and plunge into cold water to crisp. Drain and dress with sour cream, sugar, salt and, if not quite sour enough, a very little vinegar may be added. A few blanched and chopped pecan meats are a delicious addition to this salad.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Shocking Oats With Wheelbarrow.

Dear Young Folks:—I am a little farm girl eight years old. My two cousins from Chicago were out to visit us this summer and we had a good time. My cousins liked to ride horses and they tried to milk the cows. They wanted to help shock oats, so they took the wheelbarrow out in the field and put the bundles on it and then wheeled it to the place to make a shock. The neighbors all laughed at them and they didn't like to hear about shocking with a wheelbarrow.

My papa just bought a new automobile and we have had a few rides.

My brother and I go to school. We live two miles from school. We have three months of school this fall. My little sister wants to go the last day. The teacher took our pictures the other day. It will be a funny one, because we were all eating apples and laughing.

It won't be long until Christmas and we are all expecting Santa Claus to bring us something.

—Grace Marguerite.

More Help For Orval.

Dear Young Folks:—This is the first time I have ever written to your page. I like to read your letters very much. I am twelve years old and am in the sixth grade at school. Our school was out yesterday. The teacher gave us stars if we didn't whisper, and I was the lucky one. The teacher gave me a picture of a little girl. I think it is very pretty and I am glad I got it.

I am going to tell Orval how to make baking powder biscuits. One quart of flour, three teaspoonfuls of baking powder, a large tablespoonful of lard, one teaspoonful of salt and enough milk to mix a soft dough. Roll out on a mixing board, cut with a biscuit cutter and bake in a hot oven.

—Edith.

NEW, SANITARY SALT and PEPPER SHAKELESS SIFTERS

Moisture-Proof
Dirt-Proof
Germ-Proof

MADE of pure aluminum, satin finished with four narrow and two wide polished bands, and highly polished tops. These unusual salt and pepper sifters are very rich and attractive in appearance and look like silver. They are light in weight, yet so durable as to be practically indestructible. The illustration shows how the sifter works.

To operate it is necessary to simply press the button in and out. As they are moisture proof the salt will never be affected by damp atmosphere and the necessity for tiresome shaking is entirely eliminated. No more damp salt or pepper without flavor or strength. Owing to their ingenious construction, the contents [illegible]. They are so con-

[illegible] contents being always clean. Price 50 cents a pair, postpaid.

We will send you a pair for 25 cents, postpaid, if you will send us 50 cents at the same time for a yearly subscription to The Housewife.

THE HOUSEWIFE.

In it you have a magazine containing the best literary and artistic efforts of the foremost writers and illustrators of the day. Anna Steese Richardson, organizer of the Better Babies Movement, will write for The Housewife a series of articles on the professions and businesses open to the girl starting out in life. Mabel Potter Daggett will write strong articles for The Housewife on matters of world-wide interest. Helen Christine Bennett will write articles and aim to show the young wife how to start housekeeping right. Lilian Dynevor Rice, who is known to hundreds of thousands all over the United States, will continue as Department Editor of The Housewife. The departments which she will supervise will embrace practical, seasonable cookery, embroidery, crocheting and needlework of all kinds, gardening and helpful household hints. Harold Vincent Milligan, organist and well-known writer on musical subjects, will contribute articles to The Housewife on music for the home. Among the prominent writers of fiction we have scheduled for the year is Holworthy Hall, one of America's brightest young authors. His first serial "The Frying Pan" commences in the November issue of The Housewife and is interestingly and attractively illustrated by Walter Tittle. Taken all in all, The Housewife for the year 1917 will be the best magazine published at 50 cents a year.

Or, you may obtain a pair for 25 cents, by sending us an order for any one of the following combinations of magazines, if your order is received before January 1, 1917.

The Housewife	$ .50	All for $1.00
Ladies' World	1.00	
People's Home Journal or Today's Magazine	.50

Little Folks	1.00	
The Housewife	$ .50	Both for $1.60
Etude (Musical)	1.50	

Remit by P. O. Money-Order and Address All Orders to

THE HOUSEWIFE 30 Irving Place NEW YORK

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

1924—Children's dress in empire style and with long or short sleeve. The pattern is cut in 4 sizes: 2, 4, 6, and 8 years. It requires 3⅛ yards of 44-inch material for a 6-year size.

1780—Ladies' breakfast sack and cap. The pattern is cut in 3 sizes: Small, medium and large and requires 3⅜ yards of 36-inch material for the sack and ⅞ yard for the cap for a medium size.

1925—Girls' slip. The pattern is cut in 5 sizes: 2, 4, 6, 8 and 10 years. It requires for size 6, 2 yards of 36-inch material.

1929—Ladies' kimono or lounging robe. The pattern is cut in 4 sizes: 34, 38, 42 and 46 inches bust measure. It requires 7⅛ yards of 36-inch material for a 38-inch size.

1504—Ladies' combination camisole and envelope skirt drawers. The pattern is cut in 3 sizes: Small, medium and large and requires 3¼ yards of 36-inch material for a medium size.

1523—Ladies' apron with or without trimming and belt. The pattern is cut

in 3 sizes: Small, medium and large. it requires 6¾ yards of 36-inch material for a medium size.

1507—An attractive model for home or business wear. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7¼ yards of 36-inch material for a 36-inch size.

1939—Girl's dress with blouse and skirt attached to an underwaist, sleeve in either of two lengths. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 requires 4⅜ yards of 44-inch material.

1797—A simple dress for mothers' girl. Pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 2¾ yards of 36-inch material for a 6-year size.

1935 Waist-1916 Skirt—A smart tailored dress. Waist pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. The skirt in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 7 yards of 36-inch material for a 36-inch size for the entire dress. Two separate patterns, 10 cents for each pattern.

1808—Dress for misses and small women. Pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 6¼ yards of 36-inch material for an 18-year size.

1801—A practical girls' apron and cap. Pattern for this combination is cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 2½ yards of 36-inch material for a 10-year size, for the apron and ¾ yard for the cap.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for December 3, 1916.

Jesus Christ the First and the Last.

LESSON TEXT—Rev. 1.

GOLDEN TEXT—Fear not; I am the first and the last, and the living one; and I was dead, and behold, I am alive for evermore.—Rev. 1:17, 18.

The lesson committee have departed, seemingly, a long way from anything like chronological order. Paul had nothing to do with the writing of the Revelation, yet this lesson illustrates the preeminence which Jesus Christ had in the mind and labors of the great apostle (Col. 1:18).

I. Introduction, (vv. 1-3.) We would suggest that all Bible students and teachers, if possible, read the introduction to the Book of Revelation in Scofield's Reference Bible. The book proper is "The Revelation of Jesus Christ." John, the beloved disciple, who wrote the Gospel and Epistles, was the one who saw the visions recorded therein. Many of the things are historical, others are prophetically set forth. The latter are "shortly to come to pass." (See also II Peter 3:8.) John tells not only what God said but what he himself saw. The late Doctor Brooks, of St. Louis, omitted this book from his study for many years until he saw the comments recorded in verse 3. The time of the writing of this book has variously been stated as from A. D. 60 to A. D. 96; the writer was certainly John the Beloved. The place of writing was the island of Patmos in the Aegean sea, not far from Ephesus. The real author, however, is Jesus Christ, the Son of God.

II. Salutation (vv. 4-8). "The servant of Jesus who records his message was John, and the message was to be to "the seven churches which are in Asia;" that is, the western portion of Asia Minor, of which Ephesus on the Aegean sea was the principal city. These churches are definitely named in verse 11. There is good reason to think that these churches represented the seven successive epochs of church history. If so, no age is exclusively Ephesian, or Philadelphian, or Laodicean. The grace, favor, loving kindness, is a free gift from Christ, who is here giving a threefold title, namely: First begotten from the dead, witness and prince.

III. Vision (vv. 9-18). What John saw on the isle of Patmos he was to write upon a parchment roll and send it to the seven churches, each of which needed a message. Under the figure of seven candlesticks are enumerated seven churches. Into the midst of these churches, actually present in them, is one like unto the Son of Man. (See also Matthew 18:20.) Like a human being, Jesus was, but now clothed with the garment of his eternal glory, girded about with the girdle worn by priests and kings, a symbol of his power and strength (Isaiah 11:5; Eph. 6:14). His head and his hands, his feet and his eyes are all referred to, each having its symbolical significance. In his right hand are the seven stars (v. 16), the angels of the churches, pastors or leaders, possibly guardian angels (v. 20). They are held in his right hand, signifying that they are protected, upheld and controlled by his wisdom and power. (See Jeremiah 22:24). From his mouth goes a sharp, two-edged sword; the spirit of the Word of God sharper than any two-edged sword (Hebrews 4:12). And his countenance was as the sun shining in its strength, the glory, such as was manifested in the transfiguration, such as Paul saw near Damascus, is here referred to.

IV. The Command. John had enjoyed a tender intimacy with the Lord during his earthly life and yet he was stricken down with the overpowering majesty and glory which had been revealed. Now he realized, as perhaps never before, the significance of the ever-living Christ, and he is hereby specifically commanded to record this vision as he had seen it and the messages which the Lord had for the churches. The word mystery (v. 20) has reference to something which has hitherto been hidden to men and which is now about to be revealed. The revelation was to these churches, and it is to us also.

Jesus is not a mere vision, but he is a living reality, unveiled for the time from the unseen.

Jesus is a living fact which we are to communicate to men. The seven stars (v. 20) are messages in his own right hand.

The churches are the lamp stands, Christ himself is the light, the sun (v. 16).

The message John is commanded to deliver have a fourfold application (1) to the churches actually addressed, but which have long since passed away; (2) to all churches in all times, admonishing them to discover their true spiritual state; (3) to individuals, "he that hath an ear," that they shall claim the promises made "to him that overcometh" and (4) they are phophetic of the different phases of spiritual history, following the days of John, the writer, (a) Beginning; (b) persecution; (c) worldliness; (d) pristly formalism; (e) reformation; (f) testimony to the word and the name.

Wisconsin's Potato Show.

(Continued from page 5.)

they were unanimous in their praise of the quality of the exhibits. The counties which exhibited and those growers who furnished the exhibits for the county booths were:

Oneida County.—Green Mountains, Triumphs and Rurals. Growers: H. Blumenstein & Son, E. M. Delong, Herman Schoeneck, Elmer Lytle, Walter Myers, Charles Peterson, Charles Gustafson, Robert Luethy, C. D. Packard, F. S. Campbell and C. S. Kinney.

Langlade County.—Rurals and Triumphs. Growers: Schroeder Bros., Charles Parsons, Louis Winter, Moss & Lavis, John Summ, Adam Guenther and Robert Bonner.

Oconto County.—Irish Cobblers, Rurals and Triumps. Growers: Walter Racine, O. B. George, John Anderson, Holt Lumber Co., Northern Potato Co., Thomas Bardon, William Kohop, Ellis Whiting, Thomas Caldie and George Buyer.

Waupaca County.—Rurals only. Growers: H. W. Crane, Edward Hartfield; Van Boyce, H. C. Frihart, F. R. Constance, M. Frihart, A. D. Larson, E. Kapitzke, E. Jorgenson, O. C. Woodard, Mrs. M. Kapitzke, A. Jorgenson, J. W. Christensen, D. C. Hayward, W. J. House, D. Thiel and the county asylum farm.

Price County.—Rurals, Green Mountains and Triumphs. Griffth Richards and C. A. Young in charge. County's first exhibit.

Wood County.—Triumphs and Rurals. Growers: George Zeaman, Ronert Leu, Louis Zeaman, Frank Matthews, Anton Arnold, J. C. Matthews, M. H. Jackson, Carl Huser and Mary Gundee.

Bayfield County.—Early Ohios, Burbanks, Green Mountains, Russet Burbanks, Kings. Growers: J. H. Hauser, Herman Sence, J. D. Hauser, L. A. Dodd, Othmam Bollinger, John Mayberg, A. M. Thompson and H. Nourse.

Portage County.—Triumphs and Rural New Yorkers. Growers: William Scribner, Robert Carlson, John Ebest, Louis Skogland, Albert Stottenberg, Albert Gumney, L. E. Gorden, C. A. Smith, Peter Peterson, H. Rasmussen and Charles Benjamin.

Eau Claire County.—Triumphs, Rurals, Green Mountains and Early Ohios. Growers: C. H. Barlund, G. P. De Busman, William Zimmerman, J. H. Krigstad, W. D. Garnett, Raymond Basher and Hy Harlicher, Jr.

Forest County.—Rurals, Triumphs and Green Mountains. Growers: Anton Rindal, Henning Hausen, Charles Marshall, Joseph Schaeuzer, C. J. Rasmussen, August Dregen and Chris Wiegan.

Dunn County.—Green Mountains and Triumphs. Martin Truvog and Hans Teppin in charge.

Rusk County.—Green Mountains and Rurals. Growers: J. Z. Arpin, H. Hermanson, John Hurless, J. A. Schmidt, John S. Schmidt, Ed Stahl, E. D. Nheingaus, A. A. Huddan, C. M. Pienney and C. P. Coon.

Lincoln County.—Green Mountains only. Growers: A. J. Berger, Walter Holoway, Charles Keyers, Ray Wisner, R. H. Clark, Chris Jensen, George Patterson, Frank Wrabets, John Frawley, A. E. Kennedy and August Raulean.

Barron County.—Rurals and Green Mountains. Growers: C. Marwold, Carl Grendale, J. H. Johnson, C. Hazelberg, A. T. Johnson, E. H. Thompson, Cedar Lake Farm, E. Kringle and G. Kringle.

Sawyer County.—Triumphs, Green Mountains and Rurals. Growers: Nels Mowers, Charles Rynda, S. J. Urenholdt, Fred Rang, Peter Gullickson, Gunnas Mosback, C. P. West, Olaf Cook, Maxia Jacquis and Theodore Larsen.

The boys' and girls' and school exhibits under the direction of T. L. Bewick, of Madison, was the largest in the history of the state show. There were more than seventy entries by boys and girls which indicates the importance this work has become. Rusk, Price, Bayfield and Sawyer counties had exhibits of potatoes raised in school work. There were also the usual exhibits by the plant pathology department of the college of agriculture on potato diseases and their control; potato cooking demonstrations and any number of other good things, making it worth while for the potato grower to be present.

Possibly no part of the four-day program was of more interest than that devoted to the county agricultural representative work. Too much cannot be said of the success these young men attributed to the show, not only in participation in the program but in taking part in arranging the county exhibits. The following were active in exhibit arrangement: C. P. West, of Sawyer county; R. L. Cuff, of Barron county; R. A. Kolb, of Lincoln county; G. M. Householder, of Rusk county; John Swenehart, of Forest county; R. G. Ingalls, of Eau Claire county; J. M. Coyner, of Portage county; John Hauser, of Bayfield county; W. D. Juday, of Oneida county; F. G. Swoboda, of Langlade county, and Griffith Richards, of Price county. Messrs. Coyner, Householder and Cuff and George Briggs, county representative of Burnett county, discussed the county agent work in Upper Wisconsin as it related to potato development and this furnished a splendid conception of the actual work going on in this state for potato improvement.

In Portage county, which leads the state in potato acreage with 31,000 acres, Mr. Coyner has found a condition that exists in a large part of the state—mixture of varieties; varieties not of the proper type and an acreage out of proportion to total acreage. In this county there have been grown as high as a hundred varieties, but standardization is being talked and with a lesser acreage it is thought the yield can both be improved and increased. Mr. Briggs told of his problems in this almost entirely new county where potatoes were selling for $1.43 in the village of Grantsburg. Too many varieties is the trouble and inability to get together show stock kept Burnett county from having an exhibit. This was due to poor cultural methods, Mr. Briggs said, the great need being for spraying and scab treatment.

Spraying for blight was the big subject discussed by all and Mr. Cuff told of splendid results farmers in Barron county had secured. Mr. Householder discussed the importance of spraying also, and urged farmers on new land not to plant seed that had not been treated for scab and black scurf. "Don't contaminate this land," was his advice and in outlining a program for 1917 he said the first purpose in every county should be to organize a leader, be he man or boy, in every community. He dwelt on the importance of boys' and girls' work. In Rusk county 328 this year planted a peck of standard, pure seed loaned by their school with the result that on every farm where yields were obtained there will be available four and one-half bushels of this seed next spring. "The importance of this young folks' work is too often underestimated," he said. "The fact that each peck loaned these children averaged a yield of four and one-half bushels shows the splendid start we have made in standardization."

The program was as varied as it was interesting. One afternoon was devoted to marketing and transportation with addresses by W. A. Hayes, of the Soo Railroad, and H. P. Henry, of the United States Department of Agriculture. One forenoon was given over to diseases and insects with addresses by Dr. L. R. Jones, R. E. Vaughan and J. W. Bran, all of the college of agriculture. Warehouse problems were discussed by E. P. Miller, of Chicago; soil fertility by J. W. Henceroth, of Chicago; boys' and girls' club work by O. H. Benson, of the United States Department of Agriculture, and Mr. Berwick, practical lessons in potato growing by Mr. Swoboda; seed standards in Colorado by W. R. McClellan, of Colorado; methods of potato culture by Dr. H. J. Wheeler, of Boston; and Lou D. Sweet, of Denver. There was also much of interest to the women, as Miss Elizabeth Kelley, of Madison, talked on the woman's part in the food problems of today, in addition to cooking demonstrations by Miss Monroe, of the state normal school, at Eau Claire, and Miss Amory, of the state university. It was a program full of merit and varied enough to interest everyone.

No mention of the show and convention would be worthy without mention of the work of the retiring officers and the splendid co-operation given them by the business men of Eau Claire through the civic and commerce association. No stone was left unturned to insure the success of the affair and Eau Claire lived up to every promise it made when it asked the convention at Marinette to choose that city.

PROSPERITY IN CANADA

THOUSANDS of farmers in Western Canada have sold their crops this year for more than the total cost of their land. Land at $15 to $30 per acre has produced crops worth $40 to $75 an acre. Stock raising and dairying are equally profitable—hogs and beef highest in country's history. Irrigation districts producing more alfalfa and fodder crops than ever before. Get your farm home from the Canadian Pacific Railway. Last year I asked you to take advantage of this opportunity—you might have paid for your farm with the 1916 crop—again I extend the invitation. Good land from $11 to $30 per acre; irrigated land from $35; 20 years to pay; government guarantees land and water titles. Pay in full at any time if desired. We will lend you up to $2,000 in improvements in certain districts, with no security other than the land. Ready-made farms sold on special easy terms. Loan for live stock after one year's occupation, subject to certain reasonable conditions explained on request. Low taxes; no taxes on improvements. Free schools; full religious liberty; good climate, and the best neighbors in the world. Other farmers becoming rich in Western Canada; you have the same opportunity. Buy direct from the Canadian Pacific Railway. Write for free book and full information. J. S. Dennis, Assistant to the President, Canadian Pacific Railway, 82 Ninth Avenue, Calgary, Alberta, Canada.

ARE YOU GOING TO BUY LAND?

IF so, get a copy of our journal first. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F, Farm and Real Estate Journal, Traer, Iowa.

HOMESTEAD LANDS

INDIAN RESERVATION LANDS. Under Act of Congress passed 1908. No improvements. Residence or cultivation required. Large blue print map showing these lands with proposed railroads, etc., and full particulars for $1. Address No. Minnesota Homestead Lands Co., Duluth, Minn.

FOR sale, 62 acres, good wire fences, 4-r. house, large orchard, fine water, tools, telephone. R. F. D., 5 miles from best market. Price $1,600. Easy terms. A.L. Wilkins, R.1, Bx.50, Union, N.Y.

WANTED to hear from owner of good farm for sale. Send description—price. O. O. Mattson, 2954 Cedar Ave., Minneapolis, Minnesota.

25 CENTS We pay 25c each for salted rennets from milk-fed calves, if handled according to our directions. Little work to handle them. Write for directions. Address
CALF RENNETS THE MARSCHALL DAIRY LABORATORY Madison, Wis.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. Place your name and address to it, then, to know its cost, count the number of words. The rate is six cents per word, each insertion. For instance, if your advertisement, including the address, has 15 words, one insertion would cost 90 cents, which is one cent for every thousand copies printed. Note the low cost, and read what small advertisements in The Wisconsin Farmer have done for others

One **Wisconsin Farmer** seed corn advertiser says: "We are getting a nice response to our advertising. We will come back with a larger advertisement." Another says: "**The Wisconsin Farmer** has done good work helping me to sell lots of stock." And another writes: "Please discontinue my advertisement in **The Wisconsin Farmer.** I am getting pretty well sold out for the present."

These small advertisements did not have the advantage of the classified headings now available—under which your advertisement would appear.

Any "Wanted," "For Sale," or "To Exchange" advertisement will receive prompt attention and insertion will be made in first issue possible.

THE WISCONSIN FARMER **MADISON, WISCONSIN**

FARM LANDS.

BUY Oil, Coal, Gas, Timber and Corn Land in Oklahoma. Will sell you from 40 to 320 acres of land in southeast Oklahoma (recently Indian lands) that has enough oak timber on it to pay for it, right in the heart of the oil, coal, gas, mineral fields of Oklahoma. Any 40 acres may be worth a million dollars. Fine corn land, heavy, rich, black, inexhaustible soil. On this land you can produce pork for 3 cents a pound. Price for quick action while it lasts, $4 per acre. Terms if desired. Write today. C. M. Davison, Beaver Dam, Wisconsin.

WANTED—A portable saw mill at Washburn, Wis., and vicinity. Good money to be made by the right party. Inquire of W. S. Powell, R. F. D. No. 1, Box 42 A.

FOR SALE—10-acre truck farm, half-mile from Eau Claire, with buildings; 40 acres not improved; this one cheap. J. F. W. Ritsch, Eau Claire, Wisconsin.

FOR SALE or exchange for wild land in southwestern Nebraska, live stock farm of 760 acres 2½ miles from town. Write Albert Ferdon, Pittsville, Wisconsin.

WISCONSIN farm consisting of 287 acres, having good buildings, situated seven miles from good market. For information, write to Morris Johnson, Osseo, Wisconsin.

FARM LANDS.

240 ACRES land one mile from Niagara, Marinette county. Hardwood land. Will sell or exchange for Holstein cattle. C. T. Ellis, Madison, Wisconsin.

FOR RENT OR SALE—Illinois and elsewhere, special proposition. Investigate. Wood, R 705, 230 So. La Salle St., Chicago, Illinois.

MONEY TO LOAN.

MONEY TO LOAN ON FARMS. 6% with any pre-payment privilege desired. Security must be twice the amount of the loan. Address 206 Washington Bldg., Madison, Wisconsin.

TELEGRAPHY.

LEARN TELEGRAPHY. Short hours. Positions guaranteed. Write Signal Dept., Northwestern Telegraph School, Eau Claire, Wis.

GUERNSEY CATTLE.

FOR Sale—Pure-bred Guernsey bulls, from four to eighteen months old. Adolph Suhr, Cochrane, Wisconsin.

GIRL WANTED.

WANTED, girl for general house work on a farm. Mrs. Ernest Biddick, Livingston, Wis.

The AMERICAN MESSENGER

IS THE BEST Illustrated Religious Monthly Published In This Country at the Low Subscription Price of Only 50 Cents a Year.

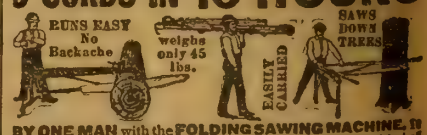
AMONG its editorial contributors may be mentioned such popular religious writers as Rev. David James Burrell, D. D. LL. D., Pastor of the Marble Collegiate Church of New York City; Rev. Charles Carroll Albertson, D. D., Pastor of the Lafayette Avenue Presbyterian Church of Brooklyn, N. Y.; Rev. J. Wilbur Chapman, D. D., the famous evangelist; Rev. Edgar Whitaker Work, D. D., Pastor of the Fourth Presbyterian Church of New York City, and Rev. George Ernest Merriam.

It is especially valuable to Christian Endeavor and other Young People's Societies. Each issue contains stories of fascinating interest, suitable for home reading and other articles relating to the family life. The American Messenger endeavors to present a comprehensive view of the progress of the Kingdom, both at home and abroad; to tell of the forward movements that are being initiated for the uplift of humanity and the betterment of mankind; to call attention to those phases of Christian work and thought that are of unusual interest; to record the manifold activities of the Christian Church; and to spread abroad the cardinal teachings of Jesus Christ, as revealed in the Gospel which He proclaimed as the message of God.

The paper is interdenominational and admirably suited for every home. All those who subscribe now to the American Messenger for 1917 at fifty cents will receive the paper until January 1, 1918. New subscribers will thus receive the issues for October, November, and December, 1916, free of cost, if they subscribe at once. If you do not know the paper, send for a free sample copy.

Address, American Tract Society, Dept. 5, Park Ave. and 40th St., New York City, N.Y.

9 CORDS IN 10 HOURS



BY ONE MAN with the **FOLDING SAWING MACHINE.** It saws down trees. Folds like a pocket knife. Saws any kind of timber on any kind of ground. One man can saw **more** timber with it than two men in any other way, and do it **easier.** Send for **FREE** illustrated catalog No. A 87, **showing Low Price** and latest improvements. First order gets agency.
Folding Sawing Machine Co., 161 West Harrison St., Chicago, Ill.

WANTED—MEN

Prepare as **Firemen, Brakemen, Electric Motormen, Train Porters** (colored). Hundreds put to work—$65 to $150 a month. No experience necessary. **More wanted in every state.** Send stamp for Application Blank. State position wanted.
I. Railway C.I., Dept. 82 Indianapolis, Ind.

Want to buy or sell a farm? Make it known by inserting an advertisement in THE FARMERS' MARKET. Six cents a word each insertion.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

PART III. "Prince Charlie"

CHAPTER IX—Continued.

"Well, he doesn't seem to me to be rushed to death with work," soliloquized Hardy, who was abruptly left alone. "He used to seem like such an all-around good fellow, but he's getting surlier every day. Maybe Tillie was right to hope he wouldn't accept the invitation. Hello, Stuart! Where are you bound for?"

"Nowhere in particular. I thought that Indian, Kalitan, was over here."

"No; Jack Genesee came over himself this morning. That mare of his is coming up in great shape, and you'd better believe he's proud over it. I reckon he saw you coming that he took himself away in such a hurry. He's a queer one."

"I should judge so. Then Kalitan won't be over?"

"Well, he's likely to be before night. Want him?"

"Yes. If you see him, will you send him to the house?"

Hardy promised; and Kalitan presented himself, with the usual interrogation:

"Rashell Hardy?"

But she, the head of the house in his eyes, was in the dark about his visit, and was not enlightened much when Stuart entered, stating that it was he who had wanted Kalitan.

That personage was at once deaf and dumb. Only by Rachel saying, "He is my friend; will you not listen?" did he unbend at all; and the girl left them on the porch alone, and a little later Stuart went upstairs, where he heard him walking up and down the room. She had heard a good deal of that since that day the three had called upon the Major, and a change had come over the spirit of their social world; for where Stuart had been the gayest, they could never depend on him now. Even Rachel found their old pleasant companionship ended suddenly, and she felt, despite his silence, he was unhappy.

"Well, when he finds his tongue he will tell me what's the matter," she decided, and so dismissed that question.

She rode to camp alone if it was needful, and sometimes caught a glimpse of Genesee if he did not happen to see her first, but he no longer came forward to speak, as the rest had—only, perhaps, a touch of his hat and a step aside into some tent, and she knew she was avoided. A conventional young lady of orthodox tendencies would have held her head a little higher next time they met, and not have seen him at all; but this one was woefully deficient in those self-respecting bulwarks; so, the next time she happened to be at the end of the avenue, she turned her steed directly across his path, and called a halt.

"Good-morning, Miss Rachel."

"Klahowya, tillikum," she answered, bringing him back to a remembrance of his Chinook. "Jack Genesee, do you intend ever to come to see us—I mean to walk in like your old self, instead of looking through the window at night?"

"Looking—"

"Don't lie," she said coolly, "for I saw you, though no one else did. Now tell me what's wrong. Why won't you come in the house?"

"Society is more select in the Kootenai hills than it was a year ago," I answered with a sort of defiance. "Do you reckon there is any woman in the house who would speak to me if she could get out of it—anyone except you?"

"Oh, I don't count."

"I had an 'invite' this morning," he added grimly—"not because they wanted me, but because your new friend over there wanted someone to give him points about the country; so I've got him to thank for being wanted at all. Now, don't look like that—or think I'm kicking. It's a square enough deal so far as I'm concerned, and it stands to reason a man of my stamp hasn't many people pining for him in a respectable house. For the matter of that, it won't do you any good to be seen talking to me this long. I'm going."

"All right; so am I. You can go along."

"With you?"

"Certainly."

"I reckon not."

"Don't be so stubborn. If you didn't feel like coming, you would not have been at that window last night."

His face flushed at this thrust which he could not parry.

"Well, I reckon I won't go there again."

"No; come inside next time. Come, ride half way to the ranch, and tell me about that trip of yours to the Blackfeet. Major Dreyer gave you great praise for your work there."

"He should have praised you;" and her own color deepened at the significance of his words.

"I met Kalitan on his way to the ranch, as I came," she said in the most irrelevant way.

He looked at her very sharply, but didn't speak.

"Well, are you going to escort me home, or must I go alone?"

"It is daylight; you know every foot of the way, and you don't need me," he said, summing up the case briefly. "When you do, let me know."

"And you won't come?" she added good-naturedly. "All right. Klahowya!"

She moved out of his way, touched Betty with the whip, and started homeward. She rather expected to meet Kalitan again, but there was no sign of him on the road; arriving at the house, she found that youth ensconced among the pillows of the largest settee with the air of a king on a throne, and watching with long, unblinking stares Miss Fred, who was stumbling over the stitches of some crochet work for the adornment of Miss Margaret.

"I'm so glad you've come!" she breathed gratefully. "He has me so nervous I can't count six; and Mrs. Hardy is taking a nap, and Aunty Luce has locked herself upstairs, and I never was stared so out of countenance in my life."

"I rather think that's a phase of Indian courtship," Rachel comforted her by saying; "so you have won a new admirer. What is it Kalitan?"

He signified that his business was with the "Man-who-laughs," the term which he designated Stuart.

"Mr. Stuart left the house just after you did," said Fred; "I thought, perhaps, to catch you."

"No, he didn't go my way. Well, you look comfortable, Kalitan; and if you had the addition of another crazy-patch cushion for your left elbow you might stand a little longer wait—think so?"

Kalitan thought he could; and there he remained until Stuart arrived, flushed and rather breathless from his ride from somewhere.

"I was out on the road, but did not see you," said Rachel, on his entrance.

"This is likely enough," he answered. "I didn't want you to—or anyone else. I'm not good company of late. I was trying to ride away from myself." Then he saw Kalitan, propped among the cushions. "Well," he said sharply; "what have you brought me?"

Kalitan answered by no word, but thrust his hand inside his hunting shirt and brought forth an envelope, which he gave into the eager hands reaching for it.

Stuart gave it one quick glance, turning it in his hand to examine both sides, and then dropped it in his pocket and sat down by the window. Rachel could see it was a thick, well-filled envelope, and that the shape was the same used by Stuart himself, very large and perfectly square—a style difficult to duplicate in the Kootenai hills.

"You can go now, if you choose Kalitan," she said, fearing his ease would induce him to stay all night, and filled with a late alarm at the idea of Tillie getting her eyes on the peaceful "hostile" and her gorgeous cushions; and without any further notice of Stuart, Kalitan took his leave.

When Rachel reentered the room, a moment later, a letter was crisping into black curls in the fireplace, and the man sat watching it moodily.

All that evening there was scarcely question or answer to be had from Stuart. He sat by the fire, with Miss Margaret in his arms—her usual place of an evening; and through the story telling and jollity he sat silent, looking, Jim said, as if he was "workin' hard at thinkin'."

"Tomorrow night you must tell us a story," said Miss Fred, turning to him. "You have escaped now for—oh, ever so many nights."

"I am afraid my stock is about exhausted."

"Out of the question! The flimsiest of excuses," she decided. "Just imagine a new one, and tell it us instead of writing it; or tell us the one you are writing at now."

"Well, we will see when tomorrow comes;" and with that vague proposal Miss Fred had to be content.

When the morrow came Stuart looked as if there had been no night for him—at least no sleep; and Rachel, or even MacDougall himself, would not think of calling him Prince Charlie, as of old.

She was no longer so curious about him and that other man who was antagonistic to him. She had been fearful, but whatever knowledge they had of each other she had decided would not mean harm; the quiet days that had passed were a sort of guarantee of that.

Yet they seemed to have nerved Stuart up to some purpose, for the morning after the burning of the letter he appeared suddenly at the door of Genesee's shack, or the one Major Dreyer had turned over to him during his own absence.

From the inside Kalitan appeared, as if by enchantment, at the sound of a hand on the latch. Stuart, with a gesture, motioned him aside, and evidently to Kalitan's own surprise, he found himself stepping out while the stranger stepped in. For perhaps a minute the Indian stood still, listening, and then, no sounds of hostilities coming to his ears, an expressive gutteral testified to his final acquiescence, and he moved away. His hesitation showed that Rachel had not been the only one to note the bearing of those two toward each other.

Had he listened a minute longer, he might have heard the peace within broken by the voices that, at first suppressed and intense, rose with growing earnestness.

The serious tones of Stuart sounded through the thin board walls in expostulation, and again as if urging some point that was granted little patience; for above it the voice of Genesee broke in, all the mellowness gone from it, killed by the brutal harshness, the contemptuous derision, with which he answered some plea or proposition.

"Oh, you come to me now, do you?" he said, walking back and forth across the room like some animal fighting to keep back rage with motion, if one can imagine an animal trying to put restraint on itself; and at every turn his smoldering, sullen gaze flashed over the still figure inside the door, and its manner, with a certain calm steadfastness of purpose, not to be upset by anger, seemed to irritate him all the more.

"So you come this time to lay out proposals to me, eh? And think, after all these years, that I'm to be talked over to what you want by a few soft words? Well, I'll see you dead first; so you can strike the back trail as soon as you've a mind to."

"I shan't go back," said Stuart, deliberately, "until I get what I came for."

The other answered with a short, mirthless laugh.

"Then you're located till doomsday," he retorted, "and doomsday in the afternoon; though I reckon that won't be much punishment, considering the attractions you manage to find up here, and the advantages you carry with you—a handsome face, a gentleman's manners and an honest name. Why, you are begging on a full hand, Mister; and what are you begging to? A man that's been about as good as dead for years—a man without any claim to a name, or to recognition by decent people—an outlaw from civilization."

"Not so bad as that, Jack," broke in Stuart, who was watching in a sort of misery the harsh self-condemnation in the restless face and eyes of Genesee. "Don't be so bitter as that on yourself. You are unjust—don't I know?"

"Your opinion may go for a big pile among your fine friends, but it doesn't amount to much right here. And you'd better beat a retreat, sir. The reputation of the highly respected Charles Stuart, the talented writer, the honorable gentleman, might get some dirty marks across it if folks knew he paid strictly private visits to Genesee Jack, a renegade squaw man; and more still if they guessed that he came for a favor—that's what you called it when you struck the shack, I believe. A favor! It has taken you a good while to find that name for it."

"No, it has not, Jack," and the earnestness of purpose seemed to rise superior to the taunts and sarcasm of the other. "It was so from the first, when I realized—after I knew—I didn't seem to have thoughts for anything else. It was a sort of justice, I suppose, that made me want them when I had put it out of my power to reach them. You don't seem to know what it means, Jack, but I—I am homesick for them; I have been for years, and now that things have changed so for me, I—Jack, have some feeling! and realize that other men can have!"

Jack turned on him like a flash.

"You—you say that to me!" he muttered fiercely.

"You, who took no count of anybody's feelings but your own, and thought God Almighty had put the best things on this earth for you to use and destroy! Killing lives as sure as if they'd never drawn another breath, and forgetting all about it with the next pretty face you saw! If that is what having a stock of feeling leads a man to, I reckon we're as well off without any such extras."

Stuart had sat down on a camp stool, his face buried in his hands, and there was a long silence after Genesee's bitter words, as he stood looking at the bent head with an explicable look in his stormy eyes. Then his visitor arose.

"Jack," he said with the same patience—not a word of retort had come from him—"Jack, I've been punished every day since. I have tried to forget it—to kill all memory by every indulgence and distraction in my reach—pursued forgetfulness so eagerly that people have thought me still chasing pleasure. I turned to work, and worked hard, but the practice brought to my knowledge so many lives made wretched as—as—well, I could not stand it. The heart sickness it brought me almost drove me melancholy mad. The only bright thing in life was—the children—"

"And then," continued Stuart, without any notice save a quick closing of the eyes as if from a blow, "and then they died—both of them. That was justice, too, no doubt, for they stayed just long enough to make themselves a necessity to me—a solace—and to make me want what I have lost. I am telling you this because I want you to know that I have had things to try me since I saw you last, and that I've come through them with the conviction that there is to be no content in life to me until I make what amends I can for the folly of the boy you knew. The thought has become a monomania with me. I hunted for months for you, and never found a trace. Then I wrote—there."

"You did!"

"Yes, I did—say what you please, do what you please. It was my only hope, and I took it. I told her I was hunting for you—and my purpose. In return I got only this," and he handed toward Genesee a sheet of paper with one line written across it. "You see—your address, nothing more. But, Jack, can't you see it would not have been sent if she had not wished—"

"That's enough!" broke in the other. "I reckon I've given you all the time I have to spare this morning, Mister. You're likely to strike better luck in some different direction than talking sentiment and the state of your feelings to me. I've been acquainted with them before—pretty much—and don't recollect that the effect was healthy."

"Jack, you will do what I ask?"

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Minnesota Aberdeen Angus Association Sale.

ALL those interested in good beef cattle should be interested in the sale of Aberdeen Angus cattle to be made by the Minnesota Aberdeen Angus Breeders' Association at the stockyards, South St. Paul, Minn., Tuesday, December 12th. The offering consists of fifty-five head, representatives of the leading families of the breed. The bulls are the growthy kind with plenty of size and substance to do heavy service. The females are in thrifty, useful breeding condition. The breeders who have contributed these cattle are prepared to sell at farmers' prices if necessary, but they are consigning cattle that should prove attractive to the veteran breeders of the Northwest. Here is a good place for the beginner to get some foundation cattle. The Aberdeen Angus Breeders' Association is co-operating with the Minnesota Association in every way possible to make this sale a success. Every animal that has been consigned to this sale has been inspected and tested and this rigid examination should appeal to the prospective buyer. Never before have the breeders of any state put forth such strenuous efforts and spent so much money to secure good cattle. These breeders have been planning on this sale for almost a year, and for several years they have been liberal buyers of the best seed stock they could select from the leading herds throughout the country. Those in the market for Aberdeen Angus cattle can well afford to attend this sale. We could give much detailed information relative to the individual consignors, but we do not deem that necessary at this time. The catalog will give you all the detailed information. Write for one at once and arrange to attend this sale. For catalog address, P. Abrahamson, secretary, Lanesboro, Minn., and please mention The Wisconsin Farmer. See page 21.—Adv.

The Bunker Polled Durhams.

THERE is more noise made about some herds, but there are few better herds of double standard Polled Durhams than the one owned by F. S. Bunker, Kilbourn, Wis. The feature of the Bunker herd is the smoothness, the thickness and the massiveness that predominates in this herd. This herd will compare with the best Short-horn herds in the Northwest—minus the horns. Two great bulls are doing service in this herd—one is a red son of the noted Cumberland's Type, and we don't know of a better bull of his age in the state. The other one is Sultan Goods, a son of Royal Silver by Whitehall Sultan, out of Missie Sultana 2d by Fond Memory. The latter is an intensely bred Whitehall Sultan yearling and we predict for him a great future in the Bunker herd. Even though all kinds of feed is high Mr. Bunker does not neglect his cattle and he is one of the best caretakers we know of. Just now he is offering for sale two bulls, one a dark roan, a very choice eleven-month-old calf and the other is ten months old and almost as good. Write him your wants, for he has the goods. Please mention this paper. See page 21. —Adv.

Scientific Trapping Methods.

PROFITS would be increased and much less slaughter of fur-bearing animals would be avoided if scientific trapping methods were adopted. The smoking-out method is one of the best, for by this means desirable animals can be secured uninjured and non-marketable animals need not be killed. Funsten Bros. & Co., 1134 Funsten Bldg., St. Louis, Mo., manufacture a very successful smoking equipment in three detachable sections, consisting of a bellows, smoke chamber, and nozzle. It is light, easy to operate, and costs only a nominal sum. Because of this outfit a den of animals in from ten to twenty minutes will be forced to come out for fresh air, and they are so weakened and dazed by the fumes that they can be easily caught alive in traps, nets or slip noose, or they can be killed with a club or rifle. Write the company for further information concerning this smoking outfit.—Adv.

Durocs and Guernseys Sold.

RILEY MARTINY & SON, Baraboo, Wis., who have been advertising Duroc Jersey spring boars and Guernsey cattle for sale advise that they are sold out of boars and have also sold all the Guernseys that they can spare at this time. Just now they have a fine assortment of fall pigs that they are offering for sale at reasonable prices. They can sell you a pair or trio unrelated. This farm also specializes on seed corn and we have been advised that they are now taking orders. Write the Martinys your wants and in so doing kindly mention The Wisconsin Farmer. See page 23.—Adv.

Stockman's Watch Free.

A CHANCE to get a handsome New York standard watch free is offered to stockmen by the Wilbur Stock Food Co., 138 Huron St., Milwaukee, Wis., manufacturers of Wilbur's stock tonic and Wilbur's poultry tonic. The watch will go free to the first thousand readers of this paper who fill out the coupon in the Wilbur advertisement on page 7 and mail it to the company. The coupon also calls for a two months' trial of Wilbur's stock tonic and a free package of Wilbur's poultry tonic. Read the advertisement on page 7 and if you want one of these handsome watches fill out the coupon and mail it promptly.—Adv.

Madson & Son's New Herd Boars.

M. MADSON & SONS, Madison, Wis., pioneer Poland China breeders of the state have recently purchased three boars that should do a great deal of good in their herd. Perhaps the best one at the present time is a son of Choice Expansion he by Great Expansion by Dorr's Expansion. The writer weighed Choice Expansion December 20th and you all know that this is right in the midst of the breeding season and this boar weighed 920 pounds. He is one of the biggest, smooth boars that we know of. The dam of the Madson boar is Lady Defender, a sow that sold in the Gerlich & Barker sale last winter for $200. This young boar has the size and quality and many of the Madson sows have been bred to him. The next purchase was a son of Big Carver, the first prize yearling at the Illinois State Fair this year. He is sired by Smooth Big Bone. The dam of the young boar is Wonder Girl by Mouw's Wonder out of the noted Long Girl. This is certainly big-type breeding. Eight boars and gilts from this litter made an average of $60 each in a recent sale so you may know that the Madson boar came from a good producing sow. The Madsons also purchased a son of Big Ben, the boar that sired the noted herd boar, Disher's Giant and Giant Ben. The dam is a Big Bone bred sow. This firm has purchased three exceptionally good big-type boars and with the care they will receive at the hands of the Madsons we feel sure that Madison, February 6th, have or will be heard from next year. The sows that will be sold in their annual sow sale at Madison, February 6th have or will be bred to these good boars.—Adv.

Herefords For Sale.

J. J. F. WINTERS, Sparta, Wis., has a few Hereford bulls that he is offering for sale. They range in age from calves six or seven months old to bulls of serviceable age. Some of them are sired by Fred 439050 that traces through his sire to such noted bulls as Corrector, Lamplighter and Beau Donald. Through his dam, Grace 277715, Fred traces to Eaton Commander, an imported bull, and to Protector. The bulls being offered by Mr. Winters are not fat, but they are in a good, rugged growing condition. If you are interested in some Hereford bulls, especially youngsters, go see the stock this breeder has for sale. If you write him for more information, kindly mention The Wisconsin Farmer. See page 21.—Adv.

High Prices of Hides and Furs.

NEVER have hides and furs been as high as now. Cow and steer hides weighing about ninety pounds are worth more than a live steer a few years ago. Wolf, fox and other furs are bringing unusually high prices. Much valuable information pertaining to domestic and wild animals and their skins is published by the Northwestern Hide & Fur Co., Minneapolis, Minn. This is an old reliable firm that can be trusted by readers of this paper who have hides and furs to ship. Write to them about your hides and furs, or send for their interesting literature. They will send it free if you will mention this paper when writing.—Adv.

Another Booster For the Poland Chinas.

W. L. PROCTOR, Darlington, Wis., was one of the good buyers at the Poland China sales last winter and he now has a fine bunch of big-type brood sows. Mr. Proctor is an enthusiastic breed booster and the Poland China breeders should feel proud to have him in their ranks. He recently purchased a spring boar from Dobson & Eastman to head his herd and in our estimation he secured one of the two best spring boars raised by this firm, this year. Keep your eye on this breeder, we feel that he is going to make good.—Adv.

Heifer Calf For Sale.

IN THIS issue of Wisconsin Farmer, M. J. Hogan, Reedsville, Wis., is advertising a week old very high-grade Holstein heifer calf for sale. This calf is nicely marked and can be bought for $25. If interested write Mr. Hogan at the above address.—Adv.

Figure on the J. C. Hendricks' Sale.

ONE of the "feature" sales to be held in the Northwest the coming winter will be the Poland China sow sale to be made by J. C. Hendricks, at Hazel Green, Wis., February 15th. No sale of the season will contain a variety of better or more popular breeding. We will not go into detail relative to the sale offering, but no doubt some of our readers would be glad to know what blood lines are going to be represented. The offering will be sired by fifteen different boars and will be bred to five different boars. There will be tried sows by Big Bug, Long Expander, Chief Price Jr., and Big Orange. The gilts are by High Wonder, Repeater, North Side Wonder, Smooth Price, Big Ben, Columbus Pan, Orphan Blue Wonder, Giant Wonder, Great Orphan, Giant Nelson, M.'s Longfellow, Orange Boy, Biggest Yet and King Joe. We feel safe in saying that no sale of the winter will contain as much popular and up-to-date breeding. As for the individuals, you can rest assured that they will be the right kind or they will not be listed. Joe won't sell a poor one—he didn't last year and you'll not be disappointed this winter. At the proper time we will have more to say about this herd of big-type Poland Chinas.—Adv.

Hampke's Holsteins.

CHAS. HAMPKE, secretary of the Manitowoc County Holstein Breeders' Association, Manitowoc, Wis., is advertising Holstein bull calves for sale on page 22. These were sired by Recreation King Johanna Rue, a grandson of Johanna Rue 3d Lad, one of the grandest bulls living and is the sire of Findore Pride Johanna Rue, the world's record cow when made. Mr. Hampke's cows averaged fifty-one pounds of milk a day last winter and he expects to exceed it this winter. He intends to do official testing soon, which will make these calves worth double the money. When writing kindly mention The Wisconsin Farmer.—Adv.

Silver Spring Farm Co. Offering.

THE Silver Spring Farm Co., Eau Claire, Wis., have a large and select herd of Holstein cattle, but owing to the increased demand for their milk they deem it necessary to sell some of the youngsters that they now have on hand. Some of the best producing blood known to the breed is represented in this herd and the young bulls and heifers that they are offering for sale at this time are very desirable individuals. It will pay you to investigate this offer. The prices quoted is very reasonable—made especially to encourage quick sales. Their advertisement appears in this issue. Write them at once and please mention The Wisconsin Farmer. See page 23.—Adv.

IN sending in copy for change in advertisement W. F. Belda, breeder of Chester White Swine, De Forest, Wis., writes: "I have an exceptionally good boar left that is ready for heavy service. He is a grandson of Combination 2d and has size, conformation and good, heavy bone. He ought to be at the head of a first-class young herd." Mr. Belda's advertisement appears on page 23.—Adv.

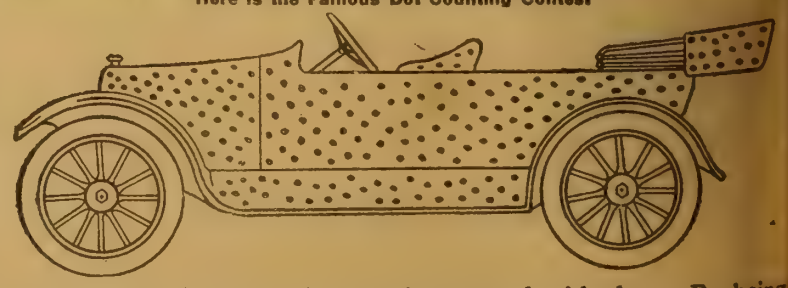
The American Society of Animal Nutrition will hold a meeting at Urbana, Illinois, December 1st and 2d. The officers of this association are W. A. Cochel, president, Manhattan, Kansas; John M. Evvard, vice president, Ames, Iowa; F. B. Morrison, secretary and treasurer, Madison, Wisconsin. Mr. Morrison is assistant director of our Wisconsin Agricultural Experiment Station.

Good winter window boxes are made by using small evergreens. Cedars are perhaps best for this purpose. Sometimes small branches are cut and set in. Small-rooted plants set in the soil are better.

Count the Dots and Win a Prize

Here is the Famous Dot Counting Contest



You see in the picture, an Automobile covered with dots. By being careful and thinking you can count the number of dots on this Auto. If you can do this, we will send you as a prize, *a surprize package of beautiful season and greeting post cards,* lithographed in rich colors and also a certificate of entry in our grand contest for an Saxon Automobile. All you have to do is to enclose a two cent stamp in your letter to pay postage and cost of mailing.

SAXON AUTO GIVEN AWAY

Remember the Saxon will absolutely be given away at the close of the grand contest. In case of a tie a Saxon will be given to each person so tied. Send at once so you can be entered in this great contest. Full particulars by return mail.

Sees Some Country With His Car.

To the Editor:—I do my own repair work on my automobile, which I have had now for four years. I overhaul it once every year. I bought my car in the month of May and one of the tires was never removed until this spring. I put on two new tires on Christmas Eve and haven't had any tire trouble since. I have had several different makes and haven't had any complaint about them, all having given the service expected and more.

I have been on the road with my car when anybody else could travel. I use the car all winter when roads are fit and use the car for hauling a lot of different things. I would not be able to say exactly my mileage for tires, because my speedometer has worked only part of the time off and on. We never leave anyone behind and when we have company we haul as many as nine grown up passengers in a five-passenger car.

I tell you we have seen some country since we got our car that we never saw before. My car has never been in a garage overnight. I carry an extra rim and keep my tires pumped up every time I go to town. I live on the state and county highway, the main traveled road between Mineral Point and Galena. One way of moving closer to town is to buy an automobile.

Lafayette Co., Wis. L. J. White.

Tires Did Not Rot.

To the Editor:—I have owned and driven an automobile since July 15, 1905. I have not had an opportunity to take any long tours—not over 100 miles per day. I got ninety-four miles on five gallons of gasoline with a six-cylinder 1916 model. This was on very good roads with two passengers. I have used a motometer for three years and it has paid for itself several times. In the spring, fall and winter I was running with the motor too cold, losing power and wasting gasoline. I now blanket the radiator and keep the temperature about 180 degrees. I have made 7,000 miles on three tires and 6,500 on another and have never had a blowout. This was covering a period of four years' running, notwithstanding the fact that agents advised me tires would rot out in two years. I did not have any such trouble with mine. I have always used a tire-testing gauge and always keep a tire up to twenty pounds to the inch and keep all the small cuts filled with mastic.

I haul to and from town anything I can get in the rear seats. In all my experience I have never had a collision and never been stalled on the road. H. E. Emigh.

Fond du Lac Co., Wisconsin.

A Richly Bred Aaltje Salo Bull

BORN February 28, 1915. Ready for immediate service. His dam, Aaltje Salo Netherland Mechthilde 78488, as a five year old made 23.35 pounds butter in seven days, 38 days after calving. She comes from a long line of heavy-producing ancestors. She not only has inherited this heavy-producing ability, but also transmits it. She has three A. R. O. daughters, one with a record of 28.63 pounds butter as a four year old. Her grandam, Aaltje Salo 5th's Netherland, has eight A. R. O. daughters holding the world's record for five years. The sire of the bull for sale is the 27-pound bull, DAISY JOHANNA 5TH, 1st prize two year old at the Wisconsin State Fair. Address
ARTHUR RUST WEST ALLIS, WISCONSIN

28-LB. HOLSTEIN BULL

BORN February, 1916, nearly ready for service. Dam, Eagle Rigtje Belle, A. R. O. record 4 years, 2 months, 28.02. Sire, Sir Elmer Johanna Wit, traces twice to Sir Johanna De Kol. His three nearest dams average 4.11% fat. Every dam in pedigree from 3.8% to 4%. His dam will be put on test in about 60 days and shows promise of increasing her record. Address
TRUTTSCHEL BROS. SHEBOYGAN FALLS, WIS.

Taken when 6 mos. old. Now weighs about 600 lbs.

A PROVEN HOLSTEIN BULL FOR SALE

IN order to avoid inbreeding we offer for sale our great herd sire, King Artis Pontiac, born Jan. 25, 1911. His daughters have made records up to 20 pounds butter in 7 days at 2 years of age.

His two nearest dams averaged over 29 lbs butter in 7 days and his sire's dam has a record of 31.7 lbs. butter in 7 days and 21,83 lbs. of milk and 1,076 lbs. butter in one year. Write for pedigree and photo.
Wisconsin Star Stock Farms Ed M. Schultz, Hartford, Wis.

YEARLING HOLSTEIN BULLS

READY for service and younger, sired by Johanna Chief DeKol, that is 62% the same blood as Johanna DeKol Van Beers, the 40-lb. cow. From official tested dams sired by a 30-lb. bull. I will also price a few heifer-calves. Prices reasonable. Edward O. Mueller, Appleton, Wis.

YOU CAN'T BEAT IT

WE have for sale a young Holstein bull from a 23.05-pound four-year-old daughter of SIR CLYDE that has 45 A. R. O. daughters, four with records above 30 pounds. He is sired by a son of BEAUTY PIETERTJE PRINCE, that is out of a daughter of SIR ORMSBY HENGERVELD DE KOL. It is some breeding. Send for extended pedigree and price. Address
DOPP BROS. OCONOMOWOC, WIS.

HOLSTEIN-FRIESIAN CATTLE.

Purebred Registered
HOLSTEIN CATTLE

Purebred registered Holstein cows hold all records, and the bright and shining high marks of production which enthuse Holstein owners and amaze the world are, forty-four and forty-two hundredths lbs butter and 808.5 lbs. milk in 7 days; one hundred seventy-one and four hundred ninety-seven thousandths lbs.butter and 3,242.6 lbs. of milk in 30 days; and fifteen hundred and six and thirty-six hundredths lbs. of butter and 31,-239.4 lbs. of milk in 365 days. The Holstein cow in her rapid forward march of progress is so profuse with remarkable achievements that even the above wonderful figures are "subject to change without notice."

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America

THE WISCONSIN FARMER

VOL. XLV. NO. 49. THURSDAY, DECEMBER 7, 1916. WHOLE NO. 1819

A WISCONSIN FARM HELPER.

MUCH of the opposition in the past to the county agricultural representative in Wisconsin, as elsewhere, has been founded on the theory that these men are "book or swivel-chair farmers" and not practical. This has been the objection of many old-timers, however untrue the fact might be, but as the system of county advisers works out and succeeds in Wisconsin the original prejudices are rapidly being dissipated. The county agent must be everything from a botanist to a veterinarian at times, which requires book knowledge, but they have been found to be practical as well, which speaks much for their success in this state. "I don't want none of those book farmers advising me," is a phrase often heard in the past, but not so frequently now. One Wisconsin agricultural representative, Mr. G. R. Ingalls, of Eau Claire county, is always immune from such reference. Farming, operating his own farm, he defies any suggestion that he is not practical, for on his own farm he is carrying out the work that he is asking his neighbors and the farmers of his county to accomplish. "What I can do you can do as well or better," is his motto.

No mention of Mr. Ingalls' work as a county agricultural representative would be complete without some reference to the farming resources of this county. In all that is progressive Eau Claire county is a leader and as a dairy county it is rapidly forging to the front. Mr. Ingalls in his extension work operates upon three theories—to improve the live stock on the farms, improve the soils and then improve the marketing conditions. With these three objects in mind he has been carrying on his work as representative during the last three years. Half of his time he devotes to the teaching of agriculture in the county training school, half to his extension work as representative, and in between times he directs the work on his own farm. The big problem in the county is the liming of the soils, they being acid, and soil work is one of Mr. Ingalls' biggest tasks. Two cow-testing associations are doing much to weed out the unprofitable dairy cows; seventy-five carloads of lime which have been bought under Mr. Ingalls' direction have gotten splendid results; more than $7,000 worth of stock has been sold through the efforts of the representative, and at every minute of the day he is at the call of farmers who wish any kind of advice. There are 1,600 farms in the county, more than 400 with silos, an increase of 33 per cent last year, and the activity in farmhouse building indicates the progress being made in upbuilding the county agriculturally.

Mr. Ingalls is doing with his farm just what he advises others to do. He has 105 acres in his farm, bought since he became county representative, and now has a herd of twenty-three Guernseys. When he began pointing out the need of liming the soils to overcome the acidity and bring about general improvement, he began experiments at home and this fall used twenty tons on his own farm, **a ton to the acre.** Liming has brought good results wherever used, as the soil is light in many places, and in addition to improving the physical condition it also makes it more compact. With his dairy herd he is testing and following the best methods. He sells only the cream. The skim milk he keeps for the young stock. His cream he sells in the city of Eau Claire, 25 per cent bringing $1 per gallon, 30 per cent $1.20 per gallon. In his county work Mr. Ingalls has found co-operation with the rural schools very essential. Through these schools he drives home the necessity of treating oats for smut, potato seed with formalin against scab, etc. He is also carrying on several student trial experiments with corn and other grains. This work is done by the pupils in the training school and forms the basis for excellent study in soil and crop improvement.

WAIST HIGH IN BUCKWHEAT.

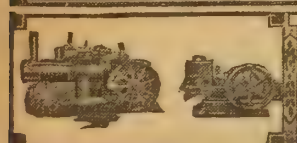
TYPICAL EAU CLAIRE CO. CORN.

Eau Claire county is well settled; it might be referred to as one of the old counties, so that Mr. Ingalls' problems are far different from those of the representatives in new or Upper Wisconsin counties. There are many fine herds of dairy cattle in the county. The county farm has a splendid herd; many farmers are meeting with splendid success with sheep and swine. All grass and grain crops do well and increased yields are coming from soil improvement work.

But the services of a well-trained and well-equipped agent like Mr. Ingalls are not confined entirely to the particular work which he does at the experiment station or the advice which he is able to give farmers on their own places. Mr. Ingalls renders a special service in connection with such events as the recent Wisconsin Potato Growers' State Convention and Show, which was held at Eau Claire. He had a great deal to do with making the preliminary arrangements for the show and helping to carry out these arrangements. A county farm adviser must also know where a great deal of agricultural information is stored away. In this respect he is somewhat like a lawyer who may not have all of the law in his head, but knows just how to find it in the law books. When Mr. Ingalls gets a tough problem which he cannot solve instantly, he commands the services of the state and federal departments and can draw on them without expense either to himself or his farmer clients, for information which they have been unable to work out.

THE FINE HOLSTEIN HERD AT THE EAU CLAIRE COUNTY FARM IS AN IDEAL TO WHICH BREEDERS MAY WORK.

FARM MECHANICS



Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

The Knight Motor.

Is the Knight motor actually superior to the poppet valve motor, and is it all that is claimed for it? If so, why is it not more generally used? Is the Knight motor more difficult to start than other motors? Will a high-speed motor last as long as one that does not run so fast?

Answer.—Automobile designers have different opinions on the above questions. The Knight motor undoubtedly has some advantages over the poppet valve type and there is no good reason why it should be harder to start. It runs very smoothly and tests have shown it to be very durable. The construction is patented and Mr. Knight has refused to license manufacturers until he was sure that they would turn out high-grade work, as he did not want the reputation of the motor to suffer on account of poor workmanship. This, and the high royalty demanded, has prevented the motor from being used extensively. Other things being equal, the high-speed motor is not as durable as a medium-speed motor. The lighter the piston and connecting rod the longer a motor will last at high speed.

Mechanical Schools.

I have seen your advertisements of mechanical schools and would like for you to advise me which is the best. Please give me the correct address of the papers "Machinery" and "The American Machinist."

Answer.—All the schools advertised in this paper are reliable, and, therefore, we would hesitate to recommend one as better than the rest. You should write to all of them for their literature and see which offers the course most suitable to your needs. After all, it is up to the student to make good, regardless of the equipment and instructors of the school. If a young man wishes to become a mechanic it is well for him to take a course in some school, but before he goes he should make up his mind to get on his overalls, work hard ten hours a day and get his hands dirty if need be. He should not, however, underestimate the value of a little "book learning," as arithmetic and drawing are essential to a good mechanic. Many students in mechanical schools fail to receive much benefit simply because they expect the school to do the work for them. There is no royal way to learning—the student must dig for himself.

"Machinery" is published by the Industrial Press, of New York City. "The American Machinist" is published by the Hill Publishing Co., also of New York City. No street number is necessary.

A Quarter-Twist Belt.

Some time ago I noticed a cut of two belt wheels in your paper, the shafts being at right angels. Please publish another diagram showing how the wheels run. Will they run successfully?

Answer.—Up and down belts will run very well on a quarter twist if the belts are not too short. They will not stay on the pulleys if not run in the direction for which they are lined up. In lining up the pulleys the thing to

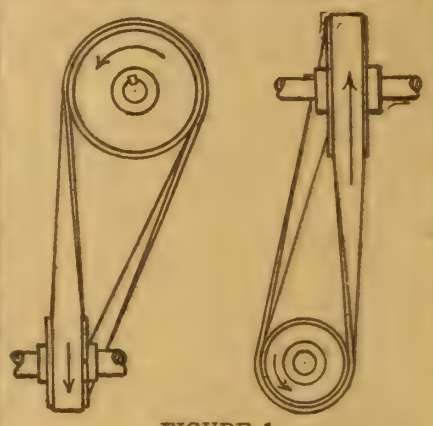


FIGURE 1.

keep in mind is that the belt must run onto each pulley straight. Figure 1 shows the direction of belt travel and how the pulleys should line up. The outside rim of the upper pulley comes in line with the center of the face of the lower pulley and the outside rim of the lower pulley comes in line with the center of the face of the upper pulley.

Connecting a Rheostat.

I have a three K. W. direct current generator for a lighting system. Please show me how to connect a rheostat to the generator.

Answer.—Figure 2 shows the internal wiring connections of your gen-

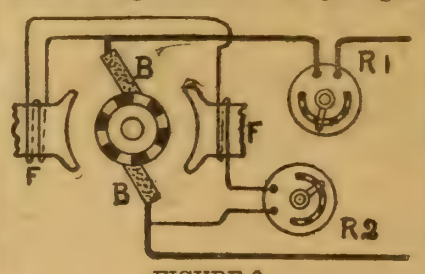

FIGURE 2.

erator; BB are the brushes, FF the field coils. The fine wires are the field circuit; the heavy wires are the armature or main line circuit. If you wish to use a rheostat to regulate the current or to reduce the voltage between the lights and the generator, open up one main line wire and connect the rheostat at R1. If you wish to use the rheostat to regulate the voltage generated by the dynamo, open up the field circuit and connect in the rheostat at R2.

Specific Gravity Too Low.

I have a 1916 Maxwell auto equipped with a Prestolite forty-ampere, twelve-volt storage battery. The gravity of the electrolyte in all the cells except one is less than 1.100, although the generator appears to be all right as the ammeter usually registered about fifteen amperes. There is a considerable gathering of white stuff which looks like frost on and around the iron parts that hold the battery in place. The wooden box, which is yet whole, is not as solid as it should be. Do the battery cells leak? It takes more water for the five cells that are the lowest gravity. The battery has never failed to run the starter or lights. What is the trouble and the remedy?

Answer.—Since your battery appears to be working all right we believe it would be best for you to let it alone, always keeping enough pure water in each cell to cover the plate at least half an inch, however. Your electrolyte is weaker than it should be. If you wish to correct this, give your battery a full charge, remove the electrolyte and add enough pure sulphuric acid to it to make the specific gravity about 1.230. Immediately replace the electrolyte and recharge the battery.

When the battery is fully charged some of the electrolyte is given off in the form of spray. If this spray comes into contact with iron it unites with the iron and forms a white substance, which is iron sulphate, commonly called copperas. Your cells do not leak unless you have to fill them every day or two.

Engine Misfires.

My 1915 Ford touring car, that has been run about 3,500 miles, has been giving trouble lately; misfiring on low throttle, or at a slow speed in high gear. It pulls and hits perfectly at a speed above ten miles per hour, and also pulls well in low. It will sometimes run smoothly below ten miles per hour, but when speeded up will begin missing. It will also miss when running idle. The coil points have been dressed; new spark plugs applied; the timer and compression tested and found all right. The magneto contact point has been cleaned, and the carbon removed from the engine; the carburetor has been adjusted for the correct gas mixture; yet the trouble has not yet been located. A few hints that might locate the trouble would surely be appreciated.

Answer.—It may be that the magneto is losing its strength, due to the insulation on the magnet coils becoming rotten. Sometimes the magnets themselves lose part of their magnetism, but this is not usually the case unless the magneto has been connected to a storage battery or otherwise misused. The insulation of the magnet coils, however, is very likely to become bad after the car has been in use two years or more, as the oil tends to rot it. In this case, the best thing to do is to get a new set of coils. These coils may be obtained from a Ford dealer, mounted on a plate, so that they may be put on easily.

There is another possible cause of your trouble. The float valve of the carburetor may be leaking. Sometimes this is caused by a little lint or dirt under the valve, but it may be due to the valve seat being worn, or the valve itself corroded by impurities in the gasoline.

An air leak into the intake, either at the gaskets or around the intake valve stems, will cause misfiring, especially at low speeds.

Ask your neighbor to subscribe for The Wisconsin Farmer.

Run Your Engine on Guaranteed Dry Cells

Red Seals are recommended as the most satisfactory and economical medium of ignition for Gas Engines. Guaranteed to furnish fat, hot sparks that spur your engine into action and keep it running at par—winter or summer. Unequalled for Autos, Tractors, etc. Also for Phones, Bells, Hand Lanterns, etc. Ask your dealer.

Red Seal Dry Batteries

are guaranteed for all purposes requiring the use of Dry Cells. They give extra good service—are most economical. The guarantee protects you.

Valuable Book FREE!

Send us your dealer's name and we'll send you valuable Engine Book, which has been adopted as a Text Book by 12 State Agricultural Colleges and numerous Agricultural High Schools. Alsowe'll mail you free copy of our catatalog containing pictures and descriptions of Everything Electrical for Home and on the Farm.

Insures Full Value on Your Furs

Here is a plan, new and unusual for trappers. There will be no more down grading on *your* furs if you follow it. We have appointed a commission of three fur experts who have judged pelts for years. They grade every fur you send us and price it according to highest market reports. They protect you. You don't rely on only one man's judgment. This may sound unusual to you. But it is simply good business. We are the largest firm in our line in America. But we have big customers to supply. If we do not grade your pelts properly you avoid us in the future. But now the Silberman plan eliminates dispute. The best trappers send us their pelts year after year, and we keep the high-class business. We believe we make more in the end this way, and so do *you*. In addition we are encouraging trappers of high grade pelts by a premium system. Premiums in new equipment.

FREE To Hunters and Trappers—Automatic Revolvers, Guns, Traps, etc.—who join our co-operative plan. So don't be tempted elsewhere. For this plan, we believe, means a bigger year for you if you take advantage of it. Write for our Fur Club News, Premium List, and List of Prices. All mailed to you free, upon request.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

"AMERICA" FREE ON REQUEST

MANY of my readers will doubtless remember that about a year and a half ago I offered to send out printed slips containing all four stanzas of our national hymn, "America," to whoever requested them, for use at farmers' institutes, short courses, homecomings and all manner of farm gatherings. The response to my offer was widespread, the requests fairly swamping me for a time. Altogether, I distributed approximately 50,000 copies, being only too glad to render this small favor to my appreciative readers.

Belated requests for these slips continue to reach me every little while, the latest being from Mr. R. S. Foster, of Biggsville, Illinois, who writes me, under date of November 24th:

Dear Mr. Pierce: If you have any more copies of "America" for free distribution, I wish you would please send me a number, for use in our community club. We will all appreciate it very heartily.

I sent the slips desired, expressing the hope (in a personal letter to Mr. Foster) that all who attend the club meeting may join, in heartiest fervor, in the grand old words, singing all four stanzas:

My country, 'tis of thee,
Sweet land of liberty,
Of thee I sing;
Land where my fathers died,
Land of the pilgrims' pride,
From every mountain side,
Let freedom ring.

My native country, thee—
Land of the noble, free—
Thy name I love;
I love thy rocks and rills,
Thy woods and templed hills;
My heart with rapture thrills
Like that above.

Let music swell the breeze,
And ring from all the trees
Sweet freedom's song;
Let mortal tongues awake;
Let all that breathe partake;
Let rocks their silence break—
The sound prolong.

Our fathers' God, to Thee,
Author of liberty;
To Thee, we sing;
Long may our land be bright
With freedom's holy light,
Protect us by Thy might,
Great God, our King.

The fact that such requests as Mr. Foster's continue to come to me, at this late date, convinces me that there is just as great a demand for these slips today as there was when I first offered them, a year ago last summer. Accordingly, I am going to renew my offer: To any of my readers, whose names are now on the subscription list of this paper, who will write to me and make the request, I will send a number of copies of "America," all four stanzas, neatly printed on a slip of paper, without one cent of expense to them, either for the printing or for the postage. These slips can be distributed at any meeting: Church, school, institute, farmers' club, family reunions, Christmas entertainments, homecomings; any place where farmers or their families congregate for any kind of exercises, and with the words before them all can join in the inspiring and uplifting hymn which has kindled the fires of patriotism in millions upon millions of the farmers of this, our beloved, country.

Do not hesitate to write and ask me for these slips, they are yours for the asking, and I am only too glad to serve you in this manner. At this time, when we are at peace with all the world and are enjoying a prosperity such as no nation ever knew before, shall we not unite in returning thanks to Him who has made all this possible and in singing our hymn of praise for a country, "sweet land of liberty," wherein all these blessings have been vouchsafed to us?

"Shall we stand and unite in singing 'America?'"

LIFE INSURANCE AGAIN.

IT HAS been some months now since I wrote advising my readers to carry life insurance, but reprints of my articles continue to come to me from various sources. You may recall that I cited the instance of a young friend who had taken out a policy for $1,000 when he was eighteen years old and who paid $26 a year for twenty years, at the end of which time the company gave him $500, in cash, upon the surrender of his policy. He thus received twenty years of $1,000 protection at a total cost of $20, or only $1 a year.

I want to repeat my former advice and I hope all will take it in the kindly spirit in which it is given. By all means investigate the life insurance matter; it is a duty which you owe yourself and all who are dependent upon you. It is a bleak, black day upon the farm when the head of the family dies, leaving an insufficient amount of ready cash to pay the burial expenses and tide the dependent family over until money can be realized from the crops or herds. A little forethought, a little good, sound business sense manifested in taking out an insurance policy, may save the wife and little ones from many and many a night of worry, many and many a day of hardship.

I learned, from the large number of letters which my former articles brought to me, that many of my readers have an altogether wrong impression of this insurance matter. The big companies conduct their business in a most scientific manner; they estimate, by the law of averages, until they can tell remarkably accurately just how many death losses to expect within a given period of time. There is nothing haphazard about the manner in which they do business today. Let me urge that you put preconceived impressions and prejudices behind you, obtain the literature of some reliable company and study it carefully. I would hate very much to think that any reader of mine, whom I might have influenced, would let his family suffer want because he failed to look into this life insurance matter thoroughly. My advice to all of you is this: Do it now, before it is too late. It will cost you nothing to investigate, for all the large insurance companies have literature which they send free on request. If you hesitate to write them direct, write to me and I will obtain the desired information for you. Remember, I am always glad to serve my readers in any way possible.

THE FARMER'S DEBT TO ELECTRICITY.

THE custom has grown up in this country of setting apart certain days and weeks in recognition of our national achievements; either along agricultural or industrial lines of activity. This week is known as Electrical Week, especial attention being paid to the remarkable progress we have made along this line in the last generation.

I wonder how many of my readers ever stop to think of the great debt the farmer owes to electricity and to those geniuses who have harnessed it to his use. We have grown so accustomed to the efficient, silent work of this marvelous hired hand of the farm we seldom think how wonderful are its many and manifold usages. Especially is this true today, when the storage battery has been perfected to such an extent that the cream separator, attached to the proper generator, develops enough electricity to keep our storage battery charged sufficiently to light the house and the outbuildings, displacing altogether the old, dangerous and insufficient kerosene lights. I do not know of any line of improvement along which we are making greater progress on the farm today than this one of lighting our buildings with electricity.

Let us stop for a minute to consider the electrical progress which we have made. It is only a little over a century and a half since Benjamin Franklin, he of "Poor Richard Almanac" fame, startled the world with the now-seemingly simple statement that electricity and lightning are one and the same thing; also, that our houses could be protected from the danger of lightning by rearing above them sharp-pointed pieces of metal, duly connected with the ground. Let me quote from an account written by a friend of Franklin, who lived at the same time he did, in the same city:

In the same year (1752) Franklin received the astonishingly bold and grand idea of ascertaining the truth of his doctrine by actually drawing down the lightning by means of sharp-pointed iron rods raised into the region of the clouds. Even in this uncertain state his passion to be useful to mankind displayed itself in a powerful manner. Admitting the identity of electricity and lightning, and knowing the power of points in repelling bodies charged with electricity, and in conducting their fires silently and imperceptibly, he suggested the idea of securing houses, ships, etc., from being damaged by lightning, by erecting pointed rods that should rise some feet above the most elevated part, and descend some feet into the ground or water. The effect of these he concluded would be either to prevent a stroke by repelling the cloud beyond the striking distance or by drawing off the electrical fire which it contained; or, if they could not affect this, they would at least conduct the electric matter to the earth without any injury to the building.

Such was the birth of the lightning rod, the value and efficacy of which millions of farmers now realize. It was the forerunner of a hundred appliances and devices which make farming more profitable and easy.

It is a far cry from Benjamin Franklin flying a kite in a storm, watching his cord and its pendant key to see if he could, indeed, draw electricity from the clouds, to the electric-lighted farmhouse, the electrically-operated cream separator or feed grinder, the electric-starting automobile and the hundred and one other devices to be found on our farms today. What would Benjamin Franklin have thought had he gone into the wheat fields of Kansas last summer and seen farmers threshing by electricity, for the first time in the history of the world, so I am informed. What would he have thought had he stood in warerooms, as I have, and seen shipments of gasoline engines, generators and storage batteries going to farms all over the grain belt, in order that houses, barns, milk houses and outbuildings might be made as light by night as the sun makes them by day? Benjamin Franklin's experiments seem childish today to us who are so accustomed to the aid which electricity gives on every side, but the extent of the debt which we owe this great American—and all the others who have followed in his footsteps—can hardly be overestimated.

I do not understand electricity; it remains as much of a marvel to me today as it did in my youth. No one understands it fully; no one can predict to what further uses it may be put in the years to come. One thing is sure—it has helped the farmer fully as much as the city man, and we do well to set apart a week in its honor and remember the men who have done so much for us in its development and extension.

THE UPLIFT OF THE FIELDS.

I AM reading, with the greatest of interest, a series of articles appearing in one of the best of our large magazines (The American), written by that cheery philosopher of rural life, David Grayson, and I want to pass along a couple of the good things he has to say. Here is his tribute to the spiritually elevating effect of work in field and garden:

I say truly, having now reached the point in my life where it seems to me I care only for writing that which is most deeply true for me, that I rarely walk in my garden or upon the hills of an evening without thinking of God. It is in my garden that all things become clearer to me, even that miracle whereby one who has offended may still see God; and this I think a wonderful thing. In my garden I understand dimly why evil is in the world, and in my garden learn how transitory it is.

Have not many of you been impressed with the same conviction as you strolled through your garden or fields, looked upon evil (in the form of weeds or stunted vegetable life) and then see how easily, after all, evil may be dispelled from our midst, leaving the crop to come through to maturity (and the soul to paradise) unhindered by the things which hold back development: Weeds, sin and the like?

That David Grayson senses the fine things of country life, and has the power to express them far better than any of us, is proved by this little description of one of the common odors of the country. He writes:

Just now I have come in from work, and will note freshly one of the best odors I have had today. As I was working in the corn a lazy breeze blew across the meadows from the west, and after loitering a moment among the blackberry bushes sought me out where I was busiest. Do you know the scent of the blackberry? Almost all the year round it is a treasure-house of odors, even when the leaves first come out; but it reaches crescendo in blossom time when, indeed, I like it least, for being too strong. It has a curious fragrance, once well called by a poet "the hot scent of the brier," and aromatically hot it is and sharp like the briers themselves. At times I do not like it at all, for it gives me a kind of faintness, while at other times, as today, it fills me with a strange sense of pleasure as though it were the very breath of the spicy earth. It is also a rare friend of the sun, for the hotter and brighter the day, the hotter and sharper the scent of the brier.

Do not our large, national magazines do well to give the place of honor to such matter, making the man in the city long to get back to the country again, where he can breathe deeply, think nobly and live righteously? I think so, indeed.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Renew Your Subscription.

NOW that the long winter nights are upon us once more, the family reading matter becomes a more important problem than ever before. We should see to it that every member of the household is provided with that which will inspire, interest and instruct.

We have striven faithfully to make The Wisconsin Farmer better, more practical and more entertaining this year than ever before, and we are encouraged by the thousands of commendatory letters which have come to us from appreciative subscribers. In fact, the response to our efforts has been so widespread and so hearty that we are given strength to attempt still greater things in the winter and the year which are before us. We propose to make The Wisconsin Farmer for the next few months more entertaining and interesting to every member of the farm household than it has ever been before in the sixty-eight years of its existence.

If we are to succeed in our efforts we must continue to have the hearty support of all our subscribers. To this end, we earnestly urge that all subscribers, whose subscriptions expire in the near future, renew without delay. They cannot afford to miss a single copy, and we must know that they are to continue in our great family of readers, if our plans are to carry as extensively as we now plan that they shall. But this is not all. Thoroughly as The Wisconsin Farmer covers Wisconsin, Minnesota and North Dakota, there may be friends or neighbors in your community who are not regular subscribers. How could you do them and us a greater favor than by suggesting to them that they become regular subscribers, so that they, too, may have the benefit of the articles which we are preparing and the advice which our force of competent experts give week after week? So let us suggest these two things: Renew your own subscription promptly and send in as many new ones as possible. We shall do our share by making The Wisconsin Farmer bigger, better and more valuable this winter, and throughout the entire coming year, than ever before.

It Is Folly to Neglect the Cow's Care.

OUR pride in Wisconsin as a dairy state was somewhat shocked recently when we stopped at a certain Wisconsin farm and found a dairyman who believes that the cow produces, regardless of her surroundings. So why go to the expenses of making her comfortable! Occasionally we still find this old type of dairymen—those who do not believe in good cow homes and good equipment, but fortunately they are the exceptions nowadays.

This farmer had eighteen cows, all grades to be sure, that he was neglecting for no other reason than he thought an animal is an animal and that care has nothing to do with milk production. They were munching at a straw pile in a cold wind on the north side of a tumble-down barn which, at the best, was none too warm. Throughout the cold winter he admitted he turned his cows out both at day and at night, regardless of the weather, and only drove them into shelter at milking time. On a cold, snowy night they would often have to seek the shelter of the building, and our conclusions would be that he gives their feed about as much attention as their care.

This man was complaining that his cows did not do more for him. He felt that they should produce a heavier flow of milk. His neighbors he said were getting better results from their cows. Their cream checks for the same number of cows were higher than his. The question every up-to-date dairyman would ask is, why should he expect them to do anything for him. Care is as important a factor in milk production as good blood, good breeding and good feeding. No cow, who is turned out to endure the rigors of winter, both night and day, can be expected to reward her owner very handsomely in the milk pail. She needs care; a good, warm stall in which she may rest at night; good, well-balanced feeds, and then if she doesn't do her duty by her owner, as judged by the scales and the test, she can expect nothing better than the shambles. The dairyman who begrudges the feed his cows eat, pays for it in the end. The good feeder nets the profit, for milk is nothing more than the converted feed the cow eats.

Each state and each community still has a few of this type of dairymen. But the value of good dairy equipment as well as good cows is rapidly becoming recognized, and sooner or later this type of dairyman will pass out of the industry. No reader of this paper, who followed the recent series of contributions by Wisconsin cow testers, can deny the value of good equipment. Every tester brought out forcibly the improvements in barns and barn equipment that had followed the membership of many farmers into testing associations. Good care and attention are essential to dairying success and good barns and good equipment are essential to good care.

Wisconsin's First Colt Show.

GRANT, the extreme southwestern county of Wisconsin, which is almost as noted for its hills as it is for its fine grass-fed steers and large shipments of hogs which find their way to the Chicago market, is doing many things in a live stock way that ought to make other communities sit up and take notice. While other counties are working to improve dairying, Grant county is also endeavoring to improve the quality of its horses, steers and hogs.

The swine breeders of this county organized last winter the first swine breeders' community association in Wisconsin. Now, Grant county has assumed another title of leadership by holding the first colt show of its kind in this state, and the success of the recent show at Bloomington was such that it will be an annual event hereafter, and will serve as the model for similar shows in other important horse breeding centers.

The Bloomington show brought out a crowd of about a thousand interested farmers and business men. It was held on Saturday, November 25th, and when it is remembered that the day was cold and Bloomington is an inland town, several miles from any railroad, it is all the more remarkable that the attendance should be so large. Twenty-five foals were shown and led before Mr. W. L. Houser, of Mondovi, for the ribbons, and the awards were made as follows:

Grade and Draft Colt Foal.—W. T. Thornton, of Bagley, first; Lynass Bros., of Bloomington, second.
Grade Draft Filly Foal.—Edward C. Covier, of Lancaster, first; M. Schmit, of Glen Haven, second.
Best Trios From the Same Sire.—Percheron group: W. T. Thornton, of Bagley; J. L. Erwin and Lynass Bros., of Bloomington. Belgian group: Edward Schmit, Harry Perkins, of Glen Haven, and Mat Ertz, of Bloomington.

The show was held under the auspices of the Wisconsin Live Stock Breeders' Association and the Bloomington committee, of which M. F. Woodhouse was chairman, assisted by Arthur McKevitt and Thomas McNamara. This committee raised $170 in that community, to be offered as prizes, and too much cannot be said of the part this community spirit played in the success of the show. This is the kind of co-operation that wins, and as only foals from pure-bred sires were shown, the event should be especially helpful to the horse-breeding operations in that county. Grant county already leads all other Wisconsin counties in horse breeding, having 101 pure-bred stallions in service in that county, but the best is none too good and the breeders are never self-satisfied.

WISCONSIN SWINE WEEK.

TO STUDY the swine industry of Wisconsin as a meat-producing business is one of the aims of "Wisconsin Swine Week" to be held at Madison, February 5th to 8th. At this meeting of breeders, feeders, drovers and consumers demonstrations will be given to show how pork can be produced at a profit by the use of forage crops, by new practices, such as the use of the self-feeder and the hogging down of corn, and by preventing and controlling the common diseases which attack the swine herd.

The Farm Auto Truck Next.

WAUKESHA COUNTY, WISCONSIN, has ten automobile trucks owned and operated by farmers, as shown by the last assessor's books. In addition to this Mr. John Ross, assessor of incomes for the county, writes us that a number of farmers have fixed over their small cars and are utilizing them for carrying purposes. These farmers, of course, have bought larger cars. "There is certainly a growing demand for a truck machine," writes Mr. Ross. Not long since the writer was in Waupaca and found the county board discussing the question of whether a truck would not simplify the road-oiling work of the county. There are two or three trucks already used in this state for oiling roads. Another place where the automobile truck is coming in handy is in collection of cream, and a number of creamery men are figuring on buying trucks to take up cream throughout the country. The automobile truck is used quite extensively near Chicago by dairies who ship their milk to the distributing stations by automobile rather than milk trains. The farmer and dairyman is looking over the automobile truck each season with increased interest. A writer in our forum department said recently that it would not be many years until most of the farmers own automobile trucks. The truck will become common in the country just as soon as the country people see that it will save them money and time.

James H. S. Johnstone Dead.

OLD-TIME readers of The Wisconsin Farmer will remember Mr. James H. S. Johnstone, who was editor of this paper twenty-three years ago when the present owner and publisher purchased The Wisconsin Farmer. Mr. Johnstone died at his home in Chicago, November 24th, after a brief illness of pneumonia.

He was one of the most widely known writers on live stock topics in this country. Mr. Johnstone was born in Glasgow, Scotland, in 1861. His father was for a number of years general manager of the Caledonia Railway. Mr. Johnstone came to the United States in 1888. Since that time he has occupied positions as editor of The Wisconsin Farmer, pure-bred and horse editor of the Chicago Live Stock World and Short-horn World, and associate editor of the Farmers' Review. He was author of the Horse Book, recognized as a standard textbook on horse breeding, buying and handling. A man of wide observation and much study, he was thoroughly posted and was looked upon as an authority on matters pertaining to the live stock industry.

For over a quarter of a century Mr. Johnstone had been a familiar figure at every big live stock show in the country and his advice was often sought in matters pertaining to such exhibitions. He was the originator of the draft horse futurities which have become such a popular feature in many of the big shows.

Washburn County Rural Survey.

NOTHING could more clearly show the development of Upper Wisconsin than a survey of the rural districts recently made by the teachers and pupils of Washburn county. While this county is away up in the woods, and has less than 1,000 farms, including every small patch cleared for farming, some notable development has occurred. Here are a few interesting figures in paragraph forms, showing some things rural Washburn county has:

171 silos.
5 farmers' clubs.
8 literary societies.
25 boys' and girls' clubs.
30 farms with registered stock.
8 farms with registered horses.
98 pianos in farm homes.
25 bath rooms with running water.
29 basement furnaces.
85 acres of alfalfa.
2 farms with more than 600 acres in cultivation.
4 farms with electric light or gas plants.
3 cultivated cranberry bogs.
360 rural children in club and school work.

Washburn county, though far removed from the supposed source of educational wisdom in this great state, is the first county in the state to have a county-wide boys' and girls' club composed of members of local clubs. This work is accomplishing wonders in the way of interesting the young people in educational matters.

Implement Show in Milwaukee Next Week.

THE eleventh annual convention and manufacturers' exhibition, under the auspices of the Wisconsin Implement and Vehicle Dealers' Association, will be held at the Auditorium, Milwaukee, December 12th, 13th and 14th. The Wisconsin Farmer takes the liberty of quoting from a letter which we have received from Mr. F. R. Sebenthall, of Eau Claire, secretary and treasurer of the association:

I am pleased to call your attention to the eleventh annual convention and manufacturers' exhibition of the Wisconsin Implement and Vehicle Dealers' Association. This will be held in the Auditorium, Milwaukee, December 12, 13 and 14, 1916. While this is a trade organization, and the exhibition is given by the manufacturers of farm equipment for the benefit of the retail dealer, nevertheless the user of farm tools is invited to not only visit the show, but to take part in the convention proceedings as well. The retail implement dealer goes to study trade conditions and to post himself so as to render better and more efficient service to his farmer customer. The farmer should attend the exhibition and note the latest "up-to-the-minute" improvements in farm machinery that the manufacturer has to offer. The dealer and his customer, the farmer, can spend valuable time in studying the equipment that goes to make up a modern farm plant, and all should co-operate to the end that the development of agriculture shall obtain its greatest results. The display of modern farm machinery will this year be the largest and best ever given in this country. Every foot of space in the Auditorium is given over to exhibition purposes, and the machinery will be displayed in motion, making a very attractive demonstration of the usefulness of each implement. Farmers can

bring their boys, agricultural schools can bring their students and the teachers can learn something to their advantage. You will all be welcome, and it is entirely free, as no admission fee is charged. A special invitation is extended to all interested parties, and all will be made welcome.

Mr. Sebenthall extends the invitation of the association in a very cordial way. The writer was present at the 1915 exhibition in Milwaukee, and it was certainly an inspiring sight. Those of our readers who desire to see what is up to date in the machinery line could not spend a day or two more profitably than by attending this exhibition in Milwaukee next week.

Banish 173 Unprofitable Cows.

THE last report of the State Cow Testing Organization shows five new associations organized at Prairie du Sac, Amhurst and Nelsonville, Medford, Rice Lake and Cedar Lake, and Bone Lake. During the month a total of 173 cows owned by members of the various associations in Wisconsin were proved to be unprofitable and were taken from the herds of which they had been a part. In the same thirty-day period ten carloads of feed were purchased by co-operation of members of the associations.

The monthly report for the state also shows that scrub and grade bulls are being ousted from the best herds. Nineteen pure-bred bulls were bought by men who have their herds regularly tested, and eight of these were to replace grade and scrub sires. In the same thirty-day period the cow testers found six separators which were losing ½% to 1% of fat and these were either readjusted or replaced.

In the month referred to, Fletcher Brothers, of Rosendale, carried off the honors for high cow. One cow in their herd produced eighty-five pounds of fat. One cow in the H. R. Moseley herd in Winnebago county produced seventy-three pounds of fat and one cow in the J. H. Kelley herd near Bloomer produced 72.2 pounds of fat.

Put It in Black and White.

OUR attention has recently been called to an instance that shows up in an ideal way the folly of renting land with only a verbal understanding between the two parties to the transaction. This is a case where corn ground was leased on the half-and-half basis, but only a verbal understanding exists at the present time between landlord and tenant. The former was of the opinion that he would have the use of the stalk fields while the tenant, after the corn is out, turns his cattle into these fields; hence the disagreement.

Now, every man who has had experience along this line knows exactly what this means, and, among other things, it generates a bad feeling between two individuals who should be on the best of terms. It would not be surprising if the case found its way into the courts for final settlement, though this would be an utterly foolish proceeding from the standpoint of the landowner, because the custom seems to be thoroughly established that the renter has the use of the stalk fields unless a contract to the contrary exists.

There is another complexity in this transaction that shows, in a forceful way, the necessity not only of having a written lease, but of having it specific in its terms. It seems that the renter is not dividing the fields half and half, but, on the other hand, is picking his own part of the crop from the good rows and selecting the landlord's share from the lean rows. This instance would indicate that the renter is a "bad actor," and, as we see it, the landlord has simply made a very poor bargain.

While we believe most emphatically in the written lease, still, after all is said and done, chief reliance must be placed in the honor of the man who puts in and takes off the crop. If, as in this case, he is unfair to the landowner by husking out the good part of the fields for himself and the poor part for the owner, he is only creating a reputation that will forever prevent him from getting another farm in that locality. Temporarily, the renter might gain by hogging the good part of the crop, but in the end he will be the loser. The incident suggests, however, the wisdom of including in the terms of the lease the manner in which the corn must be husked out. Where the land is rented on the half-and-half plan, it is the custom for each party to get every other load, and it might not be amiss to embody this plan of division in the lease.

If any of our readers have had to deal with instances of this kind, and have succeeded in effecting any sort of settlement with an unfair renter, we would be glad if they will furnish to us the result of that experience.

Use Farm Scales in Determining Weight of Products.

A RECENT issue of The Wisconsin Farmer contained a somewhat detailed description of the method used in determining the amount of hay in stacks when the length, width and height of the stacks are known. This information was given for the benefit of those who have no means of weighing hay, though it is not intended to convey the idea that under any conditions the tonnage in a stack can be determined as accurately by measurement as by weighing.

The article referred to is commented on by one of our subscribers, Mr. D. Dement, who says, in a recent communication, that he has been engaged in raising several hundred tons of alfalfa per year. He has sold many ricks of hay by the same rule that was given in The Wisconsin Farmer, that is, the rule for determining the number of cubic feet in the stack. As a result of this experience he points out that alfalfa hay that has settled from three to five months will run from 325 to 343 cubic feet per ton. The variation shows within this narrow limit on stacks twelve feet wide, from thirty to sixty feet long and twenty feet or more high when stacked. According to Mr. Dement's formula alfalfa hay is a heavy product, because ordinary mixed hay will run slightly over 500 cubic feet per ton.

In closing his letter, Mr. Dement points out that, in his opinion, nearly all crib measurements on corn as well as stack measurements are made in favor of the buyer and, therefore, he advises the use of a good scale, believing that this is one of the best investments that can be made on the farm. If any of our readers have had the experience of first measuring hay stacks and afterwards weighing them out on good farm scales, we would be glad, indeed, to have the result of that experience, and particularly would we desire to obtain a statement of the number of cubic feet required for one ton, not only in the case of alfalfa, but also in the case of clover, timothy or of mixed hay.

Do Alfalfa Roots Fill Up Tile Drains?

NEARLY all the experiment stations of the central West have been endorsing the plan of growing alfalfa very strongly during the last decade. These institutions have given substantial aid to the cause by determining the character of soil conditions that must prevail if this crop makes a thrifty growth. They have proven, for instance, that soil containing acid is no place for alfalfa, and they have furthermore ascertained that this acidity may be corrected by applying anywhere from one to three tons of ground limestone per acre, the exact amount depending upon the acidity of the soil.

In addition to the work of the stations county agents in nearly every case are working hard to popularize alfalfa. In doing this they emphasize, in the first place, the large tonnage that can be obtained from a given area and, secondly, they make a point of the great feeding value of the crop whether fed in the form of cured hay or used as a pasture for hogs. The result of this agitation by the county agents alone has unquestionably resulted in the seeding of thousands and tens of thousands of acres of alfalfa, and now that the enthusiasm has almost been worked to the sticking place we encounter an objection to this crop. The point has been raised that alfalfa growing on tiled land will sooner or later stop up the drains. A few specific instances of this have been called to our attention, but the number of cases is so small compared with the number of persons who have had no trouble and who are enthusiastic over the crop that we are inclined to attach little importance to this characteristic of the crop.

We would like to get some statistics in regard to this matter and we suggest to those of our readers who have grown alfalfa on tiled land that they take the time to write The Wisconsin Farmer stating whether or not this unfavorable effect has ever been encountered. In those cases where tile drains have been stopped up by root growth we would like to know the approximate depth of the tile and furthermore it would be interesting to have a general description of the type of soil. The answers received to this inquiry will be used for the benefit of all Wisconsin Farmer readers. We would like to hear from those who have grown the crop in tiled land without having any such injurious results follow as well as from those who have had their drains stopped up by alfalfa root growth.

Disappointed After Retiring From the Farm.

A CASE is referred to in a recent issue of the Blue Valley Bulletin which shows that the disposal of the farm and retirement to town do not always bring with it that life of contentment and pleasure which is contemplated in advance. Reference is made to a successful farmer who had an auction sale two years ago last March and then moved to town. He rented his farm for cash, and figured that in the future he could take life easy and not have any worry and no hard work. He rented a house and lot in a near-by town and bought an automobile, with all plans formulated to enjoy life in all its serenity.

Since that time there has been a great change, and next March this man is going to move back onto his own farm. He found that the cash rent was just about enough to pay his taxes and the necessary repairs on the property in town, and he had to skimp along a good deal in order to buy gasoline for his automobile. The house he rented was not in good shape, and when he asked for repairs there was no response. If these were to be made he must make them himself. One trouble followed another, with the result that life was not filled with contentment and pleasure, but, rather, with fretfulness and annoyance. He was disappointed with his social standing in town, and he found that merchants, who were glad to see him come into town from the farm, were too busy to visit with him, now that he had lots of time to visit. Their energies were devoted to the care of their business, and to them there was no difference between the idle man and the ordinary loafer. He found that a town had an atmosphere of its own, and this was strange to him. Only the rooster crowed in the language that he could understand, while an occasional "moo" of a cow thrilled him, because it brought back to him the memories of farm scenes and farm experiences.

As the result of his two years' "torture," as he calls it, this town is going to lose one of its citizens, and his old farming community will find him back where he belongs. His neighbors understand him and his two years' experience, while it has cost him some money, has yet taught him a valuable lesson, namely, that the chief pleasures of life come to each individual while engaged in his daily tasks. As the years creep over us, we must get away from the more strenuous duties of farm life, but this does not mean that all farm duties should be shunned. The work of managing a farm takes up part of our time, and there can be found at all seasons of the year, many pleasant tasks to occupy our physical forces as well as our mental powers.

The story of this individual could be matched by the experience of thousands of others, all of which would point to the conclusion that, on the average, the later years of life can be spent more pleasantly right out on the farm, amid familiar surroundings, than it can possibly be amid the clamor and roar of our towns and cities. We need the society of our old neighbors, and there are opportunities always to take part in the social, religious and business affairs of our own locality.

High Values Should Encourage Sheep Production.

THERE were upwards of 3,000,000 more sheep in the United States in 1909 than there were in 1915 and during that time the average value of sheep increased from $4.12 to $5.17 per head. Wool values started upward, even before the European war, and they have been climbing ever since. In 1910 the United States imported 263,000,000 pounds of raw wool, while last year the amount ran up to 308,000,000 pounds. If we look for an explanation as to why the number of sheep has decreased in this country we will find the cause in the gradual encroachment of agriculture on the grazing lands of the West, thereby causing an increase in the cost of sheep raising and incidentally, it may be added, creating the opportunity for the states of the central West.

We find that the eastern experiment stations are making a heroic effort to induce farmers of those states to increase the number of sheep on their farms. They are unquestionably soil builders, a ton of sheep manure having the value of $4.45, while manure from cattle is worth but $2 per ton, considering nitrogen worth 16 cents a pound, phosphoric acid 8 cents and potash 5 cents.

A few of the essentials in the problem of sheep raising are referred to in a bulletin from the Pennsylvania station. These include: The willingness of the farmer to pay the proper attention to his flock at the critical times of the year; the production of lambs of early maturity that should preferably be marketed before the first of July; the control of parasites in the flock by the sale of early lambs, rotation of pastures and flock management; the protection of sheep from dogs, by community interest in sheep, by enforcing dog laws and keeping sheep in protected quarters at night; the utilization of pasture to the greatest degree; the feeding of corn silage with clover or alfalfa hay, supplemented with grain, to the breeding ewes at definite periods; the selection of breeding sheep that possess merit in wool, as well as in mutton character; consitutional vigor and health as a result of breeding and care in a foundation flock; cheap equipment which offers protection, plenty of ventilation and a dry bed; the marketing of products of wool and mutton with an understanding of market values and demand.

It is pointed out in this bulletin that from fifteen to twenty-five ewes are a sufficient number for anyone without experience to undertake as the nucleus of a farm flock. It is resumed that a beginning is made with grades, but in any event the use of a pure-bred ram is strongly advised. Experiments at the Wisconsin and Missouri stations have shown that pure-bred mutton rams sire lambs that make great gains, reach a higher condition of flesh at less cost in amount of feed consumed, and command a higher market price than lambs sired by a scrub ram. The suggestion is made in this bulletin that one or two pure-bred ewes should be added to the females of a grade flock. The lambs from the latter may be kept and gradually the owner can eliminate his grades as the number of pure breds increase, so that in a few years, after experience is obtained in handling the sheep, something worth while will then be on hand to work with. While sheep require relatively little labor in their care, at the same time special attention is needed during the breeding and lambing season, and that is why experience in the handling of a small flock is needed before it is taken up on anything like an extensive scale. It is scarcely necessary to refer to the ability of sheep as weed destroyers, because it is a well-known fact that they will consume upwards of 90 per cent of all that troublesome weeds found on the farm. To be sure they need something besides weeds, but this is an advantage that must not be lost sight of when sheep are being considered only from the standpoint of mutton and wool production.

The Farmers' Open Forum

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

Letter From Champion Boy Farmer.

To the Editor:—I was born on the farm in the town of Sun Prairie sixteen years ago. When I entered high school I selected agricultural work because it appealed to me as being my forte. My interest in this work was not enlarged during my freshman year because I was simply getting my bearing, as it were. In my sophomore year more interest was noticeable and in my junior year, with five other boys, we were sent to the state fair at Milwaukee, where we competed with boys from all parts of the state. This encouraged me in this line of work, because in the final ranking I found that my few short years in agricultural work had made me second place boy of Wisconsin. With that as an incentive the new year's work was entered into with an enthusiasm that knew no bounds. I concluded to ask my parents if they would allow me to have a certain portion of the farm on which I might raise corn, potatoes, garden products and stock. They readily agreed to this, and, as a result, I showed in a great many of the departments at the 1916 state fair, and the awarding of places made me the champion boy of the state.

All grains and stock which I have made an effort to produce have come from the best seeds and foundation stock obtainable. I early realized that in order to improve farm conditions in our state and make my work something that would stand out as worthy of anyone to follow I would have to produce something which was better than anything that had been produced and from which production I would be able to gain a great deal of information for future use.

I attribute my success to an everlasting "stick-to-it-iveness," coupled with a co-operative spirit of the very best kind from my mother and father, together with most helpful advice and encouragement possible to receive from those who were vitally interested in my securing the best education along agricultural lines, as well as other lines that the state afforded.

These things put together, coupled with the fact that after I had planted seeds and had started stock, I never at any time let up in my enthusiasm, and during dry weather and wet I took into consideration those things necessary to overcome any bad results which might come out if I allowed the things to slip by as seemingly is done by one who becomes easily discouraged.

All work of plowing, planting, taking care of materials which I raised was under my own direct supervision, and the work which I was capable of doing in lines of judging, etc., was only made possible after diligently laboring over various assignments given in class instruction in school, and actually observing at sales of cattle and horses, which we were asked to attend. Frank Willmarth.

Better Milk Prices For Farmers.

To the Editor:—In your issue of November 2d you quote from statements I have made in regard to the production and distribution of milk. I am exceedingly happy over the fact that through a very imperfect organization the dairymen in northern Illinois and southern Wisconsin, by collective efforts, have succeeded in securing an advance in the price of milk.

For many long years they have been producing and selling milk below the cost of production. I hope these dairymen as well as other farmers will set themselves industriously to the task of a much more perfect organization, so perfect and strong that they will never accept again less than $2 for 100 pounds of clean Holstein milk, this as an average price for the whole year.

I hope at the marketing conference which is to be held in Chicago early in December some plan may be devised to compel the distributors to adopt a systematic method of delivery. It is a blistering injustice to compel consumers to pay over 8 cents per quart for milk when only 4 cents is paid to the producers!

On such a basis of prices the distributors—if system takes the place of anarchy in delivery—will make twice the profits the producers can.

It seems to me The Wisconsin Farmer should give every possible aid and encouragement to farmers in their efforts to organize, for without organization the standardizing of farm products is impossible and the getting of standards of quality is about the first step in better marketing conditions.

Geo. H. Comings.

Experience with Pop Corn.

To the Editor:—Perhaps some of your readers would like to know about the pop corn I grew. This pop corn is a superior quality and I secured the seed from California three years ago. In 1914 I raised a fine crop, but in 1915 it was a failure. Again this last year I got a fine crop and this makes me feel positive that this pop corn will grow in Wisconsin under average conditions. Everybody says they never saw such fine corn. Now I will tell you how I cared for this corn: I planted it the 15th of May, but the weather was so cold it seemed to stand still for three weeks. The weather then turned warm and the corn fairly jumped up. Then I used ashes around the hills to start it along. The stocks of this pop corn were on an average eight or ten feet high and two ears on the stalk. The soil in which I grew the corn was a sandy loam. The ground was well manured. I have never seen pop corn which pops better. It grew in Chippewa county in the town of Howard.

I am only a boy eleven years of age, but I can raise pop corn all right. This corn is white and it is known as the Elkhorn Mammoth. If any of your readers want to know more about this pop corn I will be glad to tell them.

Clifford Bonner.

Chippewa Co., Wis.

Work For Fall and Winter.

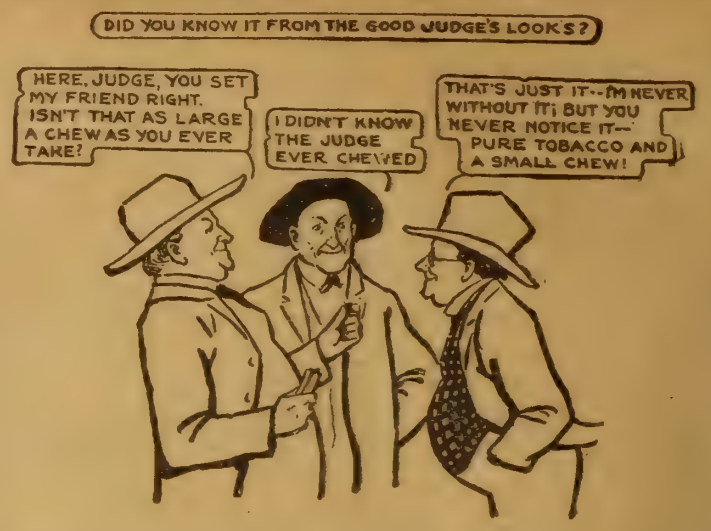
To the Editor:—Getting rid of grass, weeds and undergrowth about the farm at this time of the year is one of the best protective measures the farmer can use against crop damages the following year and years to come. Weeds, matted grass, dead vegetation and brambles along the fences, roadsides, margin of fields, banks of little streams or ditches are the natural hibernating and often breeding places of many destructive insects besides the natural seed house of our ever-present enemy, the weed. This vegetation gives grasshoppers, chinch bugs, army worms, cutworms, white grubs and other insects most favorable conditions for a reappearance the following spring and summer. The Hessian fly has often been known to lay its eggs on the volunteer wheat or rye and many times has been found to have laid them on the grass along the fence. The white grub is found to be present in nearly all places already mentioned and I believe nearly every farmer is well enough acquainted with its habits and work to be willing to try to improve the present condition by doing away with this natural nursery.

I, therefore, have suggested to the farmers of this community or any community that they fall plow sod lands intended for other than grass crops another year and clear up roadsides, fence margins and all waste lands, ditch banks and similar places by burning over, pasturing, or in case of ditch banks, by plowing or disking in the fall. This will tear up the roots and expose the eggs of the grasshopper to excessive moisture and cold of winter and will also turn up those insects which hibernate in the ground. Burning vegetation where possible will destroy many insects and many weed seeds. Culture methods are perhaps the better in the case of the grasshoppers.

Sheep are one of the greatest enemies of weeds, and where sheep can be turned into a field or a flock herded along the roadside they will effectively clear up waste vegetation and in addition the trampling of their feet will destroy many insects. The sheep at the same time turn waste material into mutton and all they require is a little grain for finishing. Frequently when sold they return a profit, but I hold that even if they merely pay for the extra grain they eat their function in destroying weeds and keeping down insects make their use well worth while. J. B. Keenan.

Agricultural Instructor, Grant Co.

During 1915 nearly 800 million dollars were paid out by old line life insurance companies in the United States and Canada to living policyholders and beneficiaries. Over one-fourth of this amount was paid to living policyholders as premium savings, surrender values and endowments. The above figures clearly demonstrate the value of life insurance to all classes of people. The fact that over one-fourth of the payments last year by old line companies was made to living policyholders shows the great value of life insurance not only as a protection but as a savings institution.



IT seems as though most men had just been waiting and waiting for W-B CUT Chewing. Naturally it should be that way. Tobacco satisfaction and not a big chew is what tobacco lovers want. You couldn't get it the old way—cheap tobacco and *excess sweetening*. But *rich* tobacco, shredded, lightly salted, that's what makes *tobacco satisfaction*—that's why W-B CUT is winning all this popularity.

Summit Knit-Nek Vest

You can do your winter's work with twice the ease and comfort if you wear a Summit Knit-Nek Vest.

It is light in weight but will keep you warm on the coldest days.

The cold and wind cannot get through the body which is made of corduroy, whipcord, moleskin or duck and lined with leather. The sleeves also are made of leather and have the wool wristlets that keep the cold away from your arms.

You get absolute protection at the throat from the patented Knit-Nek that can be turned down in mild weather.

Get one and be comfortable.

$997 – Price Guaranteed (No Extras To Buy)

No Matter Where You Live!

GORDON-VAN TINE HOMES are all sold on a basis of definite, fixed price with everything supplied. We explain fully just exactly what we furnish. No extras to buy—no chance for misunderstanding. And whether you want this house shown or any of our 200 others, you buy at "Mill-direct-to-you" Prices. You save enough to buy your lot. Plans free. Material all highest standard grades; prices lowest. Prompt shipment to you anywhere.

Our new, free book, "Gordon-Van Tine Homes" is the only plan book pricing houses both Ready-cut and not Ready-cut. Lets you buy either way. Shows over 200 homes—many adapted from plans of America's best architects but for inexpensive building. All tested and proven by being built hundreds of times in every State. Some near you; local references on request. Remember, three banks and over 100,000 customers vouch for our complete trustworthiness.

"Guaranteed Right Estimates" FREE

Before you build any building, get our Guaranteed Right Prices. Our prices do not vary in different localities. They are the same everywhere. And they are always "Factory-Direct-to-Consumer" figures. In most cases, you were paying more locally six months and even a year ago than our prices are today. It costs you nothing to learn what you can save by buying from us. Write us fully on your needs and get our quotation. Remember, we Guarantee our Estimates.

Send Coupon For FREE Book of Barn Plans

Our new Barn Book is just out—bigger and better than ever. A practical building guide to every farmer. A barn Plan Book—but more than merely a book of plans. Describes Bank, Gable, Gambrel Roof, Cattle Feed and Hay Barns. Also Corn Cribs, Implement Sheds, Poultry Houses, Stock Sheds, Silos. Lists all kinds of Barn Hardware and Fixtures. Quotes wholesale prices. Shows above barn in 26 sizes from $203 up. Ready framed! No extras. Lumber new, sound, clean. Safe, prompt delivery. Save middlemen's profits. Put our Barn Experts to work. Free architectural service. Remember, barns are 90% lumber. Get the lumber prices that have won us 100,000 customers. Be sure and get our big Barn Book.

Lumber at Mill Prices—Big Savings on Each Car!

Lumber is the backbone of all building. Your building costs are in proportion to the lumber prices you pay. Buy direct of Gordon-Van Tine! Pocket the savings you make through our "wholesale to consumer" prices. It is a physical impossibility to equal our quality at the prices without lowering standards. All your needs supplied at a moment's notice. Dimension, Heavy Joists and Timber, Drop Siding, Bevel Siding, Ceiling, Flooring, Partition, Wainscoting, Finishing Lumber, Lath, Shingles, Boards, Posts, Poles and Battens. All graded in accordance with the rules of the Lumbermen's Association. Combined price list and order blank. Quick shipments. We load direct to cars. No handling expense for you to pay. Prompt delivery wherever railroads go. Send today for our big catalog and see special lumber insert. Use the coupon.

Garages
Ready-Cut or Portable

Made to fit any size of car. Every style at every price. Highest quality materials in each. Mill-to-user prices. Carefully planned—substantial and well-built. Get our Special Garage Folder. FREE—check the coupon. Prices as low as $35 complete.

To The Women of America!

Gordon-Van Tine Homes are planned with special reference to women's comfort—designed for women to live in, work in, entertain in. They are not just ordinary "plan" houses; they are worked out by skilled architects who have seen them built over and over. And each time, there have been refinements in the features every woman likes and wants.

For instance, there is every built-in convenience, built-in pantry cases, linen closets, 2-panel fir doors of beautiful grain, bungalow trim for mahogany or other stain—all supplied as a regular part of our houses. And for special types of houses, there are other special features. As an example, consider our Model Farm Homes such as Plans Nos. 811, 312, 306, 171, 181, 169 and 168 with their large kitchens, entry, wash-rooms, down-stair bedrooms, etc.

Let me help you in the selection and building of your home—that is what I am here for. If you want the advice of a practical woman who has not only built homes but lived in them, write me the needs of yourself and your family. Tell me approximately what you can afford to spend on the home you are going to own and let me write you. Address me personally.

Waupaca and Butternut Ridge.

To the Editor:—Honors for the month ending November 20th, in the Waupaca and Butternut Ridge Cow-Testing Association go to a grade Guernsey owned by William Rossey, of Weyauwega. Her record for the month was 1,324 pounds of 5.4 per cent milk, making 71.5 pounds of fat. Mr. Rossey is a firm believer in cow testing. He says he has raised production and cut down feeding costs by belonging to our association. Thirty-nine cows succeeded in getting into the forty-pound class in our association this last month. The following tables gives the names and records of the cows in this association which produced forty-five pounds of butter fat or over for the month:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

Across the Years in Dairying.

To the Editor:—When we look back we like to see that we have done something worth while. After twenty-five years on the farm it gives me satisfaction to see that we have made some progress in dairying. May I set down a few of the things which show that we have not been standing still all this time?

A quarter of a century ago we had three cows. None of them tested more than 3 or 3½ per cent of butter fat. We had no such thing in our part of the country then as a Babcock test, but I sent away and got a little device for determining the relative value of milk given by different cows. It had two tubes about five-eighths of an inch in diameter with a scale attached to show how deep the cream was. With this I tried my cows out and could not help being surprised at the difference in the value of the various cows' milk. In some cases a cow would stand at least one-third higher than another.

Today we have about thirty head of cattle. Some of our cows are now giving milk that tests 5½, or 2 per cent above that reached by the cows of those first years on the farm. We do not say this to boast. The top is a long way above our heads yet, but the going is good in that direction and we mean to keep on.

And then a quarter of a century ago we had no bull of our own, but had to depend on service at some neighbor's. It brings some sense of shame and regret to my mind to be compelled to confess that we were not very particular in those days to breed from any but ordinary sires. In fact, nobody had anything except average bulls. In all that section of the country then there was not a single pure-bred bull. Now they are everywhere. We have one of our own, a fine type of the Guernsey stock, that we breed from. Here, too, we are looking for better things.

As for the quality of our cows, we have some choice pure breds and a lot of nice grades. Our calves for 1916 were certainly the finest bunch we ever had. One thing had a bearing on that and that is we had milk right from the separator to feed them. Here is a good pointer. Never feed cold milk to calves. If you have to set a kettle on the stove to warm the milk fed, do it. It will pay.

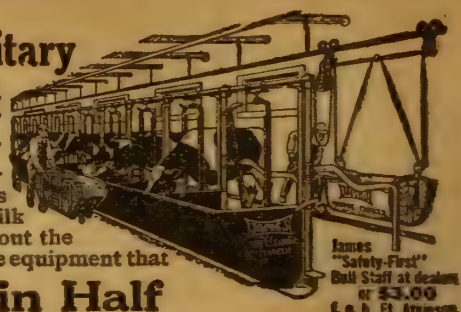
But I think about the best thing we have learned while these years have been passing is that care is worth wellnigh as much as breeding or feeding. Some day we will all waken to the fact that good treatment and kindness have a real money value. This is about the last thing the average farmer thinks of. And it is why so many of us make an indifferent success or fail altogether. Choice in selecting the best calves for the home dairy, picking out the cows for breeding purposes and saving only the best calves year after year from the best cows, taking the best possible care of all stock, being good and kind to every living creature—these are the touchstones of dairy success. E. L. V.

The high school at Viola, Wisconsin, has an agricultural library which is quite liberally used. The instructor in agriculture in this high school has charge of the distribution of the books which are loaned free to farmers. Books and other literature on almost any subject pertaining to farming is furnished upon application.

Eben F. Jones' Short-horns.

THOSE that follow the Short-horn game in Wisconsin know that Eben E. Jones, Rockland, Wis., is a breeder of choice Short-horns. His cattle were well up in the money at many of the leading fairs during the past season. At any time you are in the market for a good young bull or a few heifers it will pay you to write to Mr. Jones and let him describe what he has for sale. This is one of the best herds in the state.—Adv.

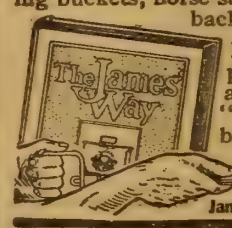
"JAMES" Sanitary Barn Equipment



enables you to do your present work in half the time—keeps hired help contented—improves cow comfort, therefore increases milk yield—makes sanitation possible about the barn. Why not get acquainted with the equipment that

Cuts Work in Half

The JAMES line includes stalls, stanchions, pens, carriers, watering buckets, horse stable equipment, etc.—all JAMES quality and backed by JAMES service.



If thinking of building, remodeling or equipping a barn, tell us when you expect to do it and for how many cows. Then a copy of "The Jamesway" containing much valuable barn-building information, etc., will be sent you free.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

The "Why" of Not Getting Eggs From Pullets.

It is not difficult to secure a profitable supply of eggs from pullets which have been properly grown during their growing period. The great problem, the demerit mark lodged against the majority of poultry keepers, is that they have not been able to properly mature their growing stock. This, of course, must be set down as a failure for this year and resolutions to do better next year are in order.

Egg production, taken that the pullets have been properly grown, depends on three things—proper feed, proper housing and proper care. The most important of these is proper feed.

Of course, it goes without saying growing pullets should not be yarded in flocks with cockerels. One reason for it is that the latter nag the former too much, keeping them in a constant state of excitement.

Another reason, and probably a more important one, is that the cockerels can stand, and should have, heavier feeding than it would be wise to give pullets. Pullets should not be forced to premature laying.

They should be grown rapidly as it is possible with good, sound grains. Meat should be given sparingly and concentrated ground feed should be allowed but once a day. Pullets for early and steady laying should be the progeny of hens that possessed that trait; they should have been hatched not later than the middle of May; they should not have been fed too heavily of stimulating food; and never in their period of growth, or when placed in winter quarters, should they be overcrowded.

A pullet that begins laying at six or seven months of age, or, in other words, in the months of November or December, will, as a rule, be a more reliable egg producer than the one at a more tender age. Many pullets are raised outdoors during the summer, and are often allowed to remain outdoors way up until winter sets in. Such care will not secure eggs from pullets even if hatched early. Young birds exposed to all sorts of weather, especially at night, surely cannot remain in the pink of condition as will those which from little up are made to roost at night in an open shed or in fresh-air houses.

Another point not to be overlooked is their feed and the manner in which it is given. An overfat pullet will not only be tardy in starting, as a general thing, but will be an unreliable layer throughout her first laying year. Therefore, it is important that the pullets get the right amount of feed of the right kind and at the right time. There can be no rule established to govern quantity, but it is important that the proper material be secured and fed and that the meals be regularly given.

The quantity to be fed at a time, however, can be determined quite accurately with individual flocks by keeping a close watch on the appetites of the pullets. But what might be right with one flock might be entirely wrong with another. Just all that a pullet will greedily eat is a good method provided the quality of the food is up to the standard of purity and is so balanced that it will fit the object required.

Pullets must not be quartered in houses that close up tight at night. More colds and other cases of sickness are bred from such a coop than when the young fowls are allowed to roost out on trees or fences. The pullet house should be practically an open-front one. Cold air is no detriment so long as the fowls are not exposed to cold rain or snow and there are no drafts in the house. Fresh air is beneficial rather than detrimental. Given these conditions, there is no reason, except the ancestry of the pullets or hens, why a satisfactory supply of eggs should not be produced.

Ask your neighbor to subscribe for The Wisconsin Farmer.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. Place your name and address to it, then, to know its cost, count the number of words. The rate is six cents per word, each insertion. For instance, if your advertisement, including the address, has 15 words, one insertion would cost 90 cents, which is one cent for every thousand copies printed. Note the low cost, and read what small advertisements in The Wisconsin Farmer have done for others

One **Wisconsin Farmer** seed corn advertiser says: "We are getting a nice response to our advertising. We will come back with a larger advertisement." Another says: "**The Wisconsin Farmer** has done good work helping me to sell lots of stock." And another writes: "Please discontinue my advertisement in **The Wisconsin Farmer.** I am getting pretty well sold out for the present."

These small advertisements did not have the advantage of the classified headings now available—under which your advertisement would appear.

Any "Wanted," "For Sale," or "To Exchange" advertisement will receive prompt attention and insertion will be made in first issue possible.

THE WISCONSIN FARMER **MADISON, WISCONSIN**

TURKEYS.

WHITE Holland turkeys. Rose Comb Brown Leghorn cockerels. Thos. Hamilton, Loyal, Wisconsin.

FARM LANDS.

BUY Oil, Coal, Gas, Timber and Corn Land in Oklahoma. Will sell you from 40 to 320 acres of land in southeast Oklahoma (recently Indian lands) that has enough oak timber on it to pay for it, right in the heart of the oil, coal, gas, mineral fields of Oklahoma. Any 40 acres may be worth a million dollars. Fine corn land, heavy, rich, black, inexhaustible soil. On this land you can produce pork for 3 cents a pound. Price for quick action while it lasts, $4 per acre. Terms if desired. Write today. C. M. Davison, Beaver Dam, Wisconsin.

I OWN three farms. Will sell one farm consisting of 160 acres in order to stock up other farms. 40 acres in tame hay, about 15 acres seeded down this fall with rye, balance in pasture. Part ready for plow, no stone or stumps, black loam soil. 30 acres good hard timber. House, barn and other buildings, about 6 miles from town; on mail route, telephone line, they gather cream every morning. Will consider good heifers, prefer Guernsey or milk cows, might consider automobile if good or young horses. Price $40 per acre. Can arrange terms. Henry Wilson, Ladysmith, Wisconsin.

"ESIDARAP SNEMYRIAD." Read backward. "Dairymen's Paradise." That's what Aitkin county is. The balance of our Company's lands are going fast. Get a home while you can buy cheaply. Write Arnold, Land Agent, Rock Island R'y, 153 Wolvin Bldg., Duluth, Minn.

700 ACRES of fine saw timber, white and red oak, good corn and grass land when timber is removed, one and one-half miles from town. Lumber, ties, mining props and cord wood can be handled profitably. For price and terms write C. F. Higley, Rolla, Mo.

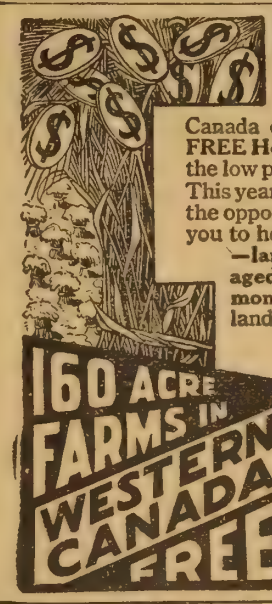
SNAP IN 40 ACRES: Clay loam soil; lies gently rolling; 8 acres natural meadow; 2 miles from station; only $450; terms to suit. The Ev. Luth. Colonization Co., Merrill, Wis.

102 ACRES, 35 cultivated, balance timber. Black loam; 2 miles station; creek through it. Cheap for cash. Terms. E. O. Bonesville, Caryville, Wis.

FOR SALE or exchange for wild land in southwestern Nebraska, live stock farm of 760 acres 2½ miles from town. Write Albert Ferdon, Pittsville, Wisconsin.

FOR RENT OR SALE—Illinois and elsewhere, special proposition. Investigate. Wood, R 705, 230 So. La Salle St., Chicago, Illinois.

Ask your neighbor to subscribe for The Wisconsin Farmer.



Raise High Priced Wheat on Fertile Canadian Soil

Canada extends to you a hearty invitation to settle on her **FREE Homestead lands of 160 acres each** or secure some of the low priced lands in **Manitoba, Saskatchewan and Alberta.** This year **wheat is higher** but **Canadian land just as cheap,** so the opportunity is more attractive than ever. Canada wants you to help **feed the world** by tilling some of her fertile soil **—land similar to that** which during many years **has averaged 20 to 45 bushels of wheat to the acre.** Think of the **money you can make** with wheat around **$2 a bushel** and land so easy to get. Wonderful yields also of **Oats, Barley and Flax. Mixed farming** in Western Canada is as **profitable an industry as grain growing.**

The Government this year is asking farmers to put increased acreage into grain. Military service is not compulsory in Canada but there is a great demand for farm labor to replace the many young men who have volunteered for service. The climate is healthful and agreeable, railway facilities excellent, good schools and churches convenient. Write for literature as to reduced railway rates to Supt. of Immigration, Ottawa, Can., or to

GEO. A. HALL,
123 2d St., Milwaukee, Wis.
Canadian Government Agent.

TO SETTLE AFFAIRS

OF company will sacrifice 16, 604 acres, admirably situated for cattle purposes. All kinds of forage, fruit and truck crops can be raised. Conveniently located between Miami and West Palm Beach; on canals and near railroad. Price $10 acre, reasonable terms, might consider sub-dividing. Pasture all year round. Full information A. W. Cain, 1010 Bisbee Bldg., Jacksonville, Florida.

HOMESTEAD LANDS

INDIAN RESERVATION LANDS. Under Act of Congress passed 1908. No improvements. Residence or cultivation required. Large blue print map showing these lands with proposed railroads, etc., and full particulars for $1. Address No. Minnesota Homestead Lands Co., Duluth, Minn.

Minnesota With 15,000,000 Acres

OF land fit for agriculture, and yet unoccupied, this state offers homes for thousands of farmers. Are you going to be one? Maps and literature sent free. Fred D. Sherman, Commissioner of Immigration, Rm.200, State Capitol, St. Paul, Minn.

FOR SALE or exchange, 160 acres; 25 clear, balance pasture; no bldgs.; located in Monroe county; easy terms. A. A. Crawford, Mather, Wis.

SOME extra large, choice, heavy-boned Mammoth Bronze turkey toms and hens. Stock for sale, prices reasonable. O.C.Olson, R.2, Strum, Wis.

PROSPERITY IN CANADA

THOUSANDS of farmers in Western Canada have sold their crops this year for more than the total cost of their land. Land at $15 to $30 per acre has produced crops worth $40 to $75 an acre. Stock raising and dairying are equally profitable—hogs and beef highest in country's history. Irrigation districts producing more alfalfa and fodder crops than ever before. Get your farm home from the Canadian Pacific Railway. Last year I asked you to take advantage of this opportunity—you might have paid for your farm with the 1916 crop—again I extend the invitation. Good land from $11 to $30 per acre; irrigated land from $35; 20 years to pay; government guarantees land and water titles. Pay in full at any time if desired. We will lend you up to $2,000 in improvements in certain districts, with no security other than the land. Ready-made farms sold on special easy terms. Loan for live stock after one year's occupation, subject to certain reasonable conditions explained on request. Low taxes; no taxes on improvements. Free schools; full religious liberty; good climate, and the best neighbors in the world. Other farmers becoming rich in Western Canada; you have the same opportunity. Buy direct from the Canadian Pacific Railway. Write for free book and full information. J. S. Dennis, Assistant to the President, Canadian Pacific Railway, 82 Ninth Avenue, Calgary, Alberta, Canada.

WANTED to hear from owner of good farm for sale. Send description—price. O. O. Mattson, 2954 Cedar Ave., Minneapolis, Minnesota.

Feed the Cripples Plant the Fat Boys

Don't cut your grain crop one-third to one-half by sowing seed as it comes out of the bin. Grade out the thin little cripples and feed them to the hogs. Plant only the big fat grains, with lots of nourishment to give the stalks a good start, and

In and Around Wisconsin

COMING EVENTS.

Winter Course Wisconsin Dairy School, Madison, Wis., November 8th to February 1st.

International Live Stock Exposition, Chicago, Ill., December 2d to 9th.

Wisconsin Beekeepers' Association, Madison, December 7th and 8th.

Wisconsin State Horticultural Society, at Madison, December 12th, 13th and 14th.

Wisconsin Poultry Association Show, At Madison, January 1st to 5th.

Wisconsin Cheesemakers' Association, at Fond du Lac, January 10th to 12th.

Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

According to the reports of assessors in Kewaunee county, that county has 7,841 horses, 28,289 cattle, 1,486 sheep and 7,486 swine. There are 573 automobiles in the county.

Jackson county will soon have the services of an agricultural representative. This will be the nineteenth county in Wisconsin to take up this work. The man who will be in the field in Jackson county has not yet been selected.

Reports from Waushara county say that a very small per cent of the potato crop has been stored. Farmers have been selling preferring to take advantage of a certain high market rather than take chances on a better one in the spring.

Milk dealers in the vicinity of Stevens Point have accepted the terms of a new city ordinance which requires testing of dairy cows for tuberculosis. The local board of health insisted that only milk from tuberculin-tested animals be sold in the city. A conference with producers brought a satisfactory agreement.

The officers of the Wisconsin Potato Growers' Association were all re-elected for another year at the closing session of the convention at Eau Claire recently. J. W. Hicks, of Prentice, is president; O. Woodard, of Weyauwega, vice president, and J. G. Milward, of Madison, secretary. It is probable the 1917 show will be held in Madison. Selection of the city has been left to the executive committee.

The Brown county board of supervisors recently appropriated $5,000 for purchasing pure-bred Holstein cattle. These cattle are to be the foundation of a herd. Approximately $100,000 has been spent in the last ten years for support of the Brown county asylum and almshouse. The board is going to make an effort to put these institutions on a self-supporting basis and they believe that good live stock will be a big help.

The Upper Wisconsin Product Special run under the auspices of the Wisconsin Immigration Bureau, recently completed a schedule of 19 points on the Omaha Railroad through Iowa and Minnesota. About 9,000 people witnessed the exhibit, including the moving pictures and lantern slides, and listened to addresses by B. G. Packer, Director of Immigration; F. S. McCabe, Industrial Commissioner of the Omaha Road, and President J. W. Hicks, of the Wisconsin Potato Growers' Association.

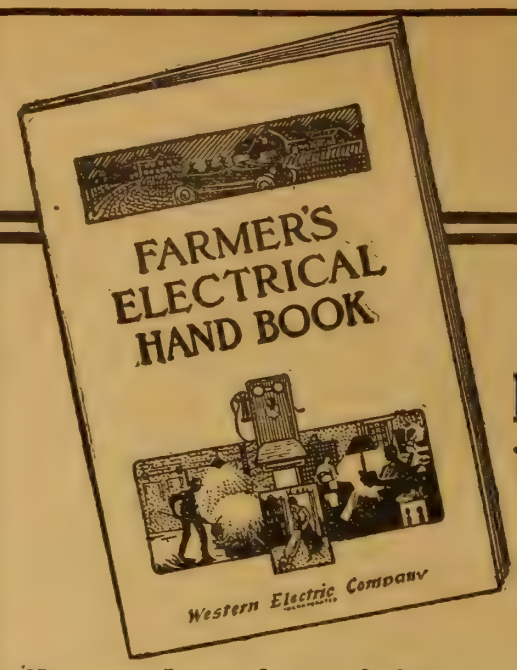
The annual congress of live stock men under the management of the Minnesota Live Stock Breeders' Association will be held at St. Paul at the University farm January 1st to 6th. This is in connection with Farmers' and Homemakers' Week. Live Stock, rural credits, soils, farm management and cattle diseases will be the chief subjects emphasized. Dr. W. L. Williams, of Cornell University, will speak on cattle diseases; Herbert Quick, chairman of the new Federal Farm Loan Board, will talk on rural credits; Dr. Cyril G. Hopkins will discuss soil; Mrs. Grace R. Darling, of Milwaukee, will talk on child welfare; Miss Alice M. Loomis, of the University of Nebraska, will speak on various phases of home management.

Edward Wittwer & Bro. established a new level for milk prices in Green county. They have contracted with the patrons of the Moritz factory in Washington township for a period of thirteen months at $1.50 and $2.00 per hundred pounds. The $2.00 rate went into effect December 1st and continues for seven months and the $1.50 rate will apply to the remaining six months. No milk test is required. This is an unusual contract—especially the length of time.

The first public market day was held recently in La Crosse, Wisconsin. The event was a success from the standpoint of buyers, but there were not a very large number of farmers present offering their products. The day was cold and windy, however, and those who had charge of the affair feel that it will be a greater success in better weather. About 500 people presented themselves at the big tent which was used as a market house. A good many farmers visited the market to see how the experiment would turn out, but they had nothing to sell. They promised hereafter to bring in their produce. One interesting feature of the day was the fact that grocers met several farmers on their way into town and purchased their entire loads at good prices.

This is just one of many affairs to get the producer and the consumer closer together so that they may share in the profits which come from the sale of produce.

During the five-year period ending January 1, 1915, 147 fraternal and assessment societies had closed their business and the total amount of fraternal and assessment insurance had increased during that five years only 200 million dollars. During the same period not a policyholder in an old line company had lost the value of his protection and every policy had been fulfilled in accordance with its terms, and the amount of old line life insurance had increased during the five-year period over six billion dollars.



This FREE BOOK Will Tell You the Answers

How can I get electric light in my house
How can I put in an electric bell
How can we get reliable telephone service on our farm
How can I put up a telephone
What is a horsepower in electricity
How can I cook and wash by electricity

These and many other questions concerning the farmer are answered, with illustrations, in the Farmer's Electrical Handbook, which will be sent to you free.

Just fill in and mail the coupon NOW—the edition is limited.

Work of Wisconsin Milk Producers

Association Whose Members Produce Milk For Milwaukee and Other Centers Has Done Some Good Work.

WHEN a handful of farmer-dairymen, interested in securing a fair, equitable price for their milk, met in Milwaukee last winter to organize the Milwaukee Milk and Cream Shippers' Association, the day of 6 cents a quart milk on the doorsteps of Milwaukee citizens began to fade. That was the beginning of a new era of milk prices for the producers in the Milwaukee territory, consisting of the counties of Milwaukee, Waukesha, Jefferson, Dodge, Washington, Racine and Ozaukee, and today these producers are getting, without any strikes, but through organization, the best prices they have ever received.

Every farmer knows that when milk sells at 6 cents delivered on the doorstep there isn't much profit in dairying for him with feeds at the present level of prices. So the new association, still an infant, began its fight for better prices with the result that Milwaukee producers are getting a cent more per quart this year than last winter, although the price to Milwaukee residents has been pushed up to 8 cents, a 2-cent increase. The producers realize the dealers are benefiting probably more than they, but $2 milk could never have been secured with milk at 6 cents per quart in Milwaukee and they hope for a better adjustment at future price-fixing dates. The new prices are for the six months beginning November 1st and are $1.50 f. o. b. Milwaukee for an eight-gallon can of milk and 8 cents per pound butter fat over the average Chicago quotations each month on butter for their cream.

No organization can succeed unless it has some definite reason for its existence. That probably accounts for the success of the Milwaukee Milk and Cream Producers' Association, for it has brought together all of the larger shippers in the Milwaukee territory and now serves as the medium through which the shippers can deal with the dealers on prices and other conditions governing prices. To succeed such an organization must do something; must add some accomplishments, and the fact that the milk scale has been forced up to $2 a hundred average for the winter months without resorting to strikes, etc., indicates its growing power.

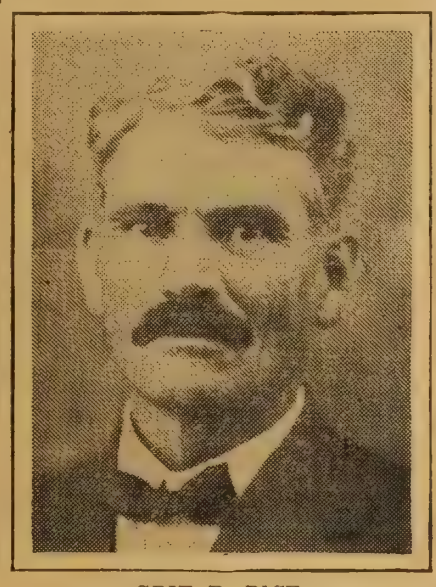
Prior to the organization of this association there existed for nine years a voluntary organization known as the Milwaukee Milk Producers Association. It did a good work in its way, but its control over the market was uncertain and the members were not able to enforce their demands. The Milwaukee dealers could control the milk supply and when threats were made they drew upon other territory.

During the four years prior to 1913 the winter price average paid Milwaukee producers was 93¾ cents per can as compared with this winter's price of $1.50. In 1913 the price was increased to $1.14 per can; and in 1914 the old association succeeded in forcing the price up to $1.23, but their strength waned and in 1914 the dealers forced it back to $1.14½. All these prices are for the eight-gallon can, f. o. b. Milwaukee.

This drop in price in the winter of 1914 meant a loss of $200,000 to the dairymen in the Milwaukee territory, but they were forced to take it. Last fall prices were a little better; business conditions had improved and the producers secured an increase to $1.18½ per can, f. o. b. Milwaukee. This was a 4 cents per can increase. But no active steps at forcing milk prices up so that the farmers need no longer serve as philanthropists to the city of Milwaukee were taken until this spring when the new association, an outgrowth of the old, sprang into existence.

Immediately there began negotiations for increases in the summer prices and following the Chicago trouble this was granted in July. In October they had sent the price to $1.35 per can and during last month signed the six months' scale for $1.50 per can as compared with $1.18½ last year, $1.14¼ two years ago, $1.23 three years ago, $1.14 four years ago and an average of 93¾ cents during the preceding four years. During all these years the dealers have insisted on making the prices each month and it was only this fall that the producers won out in their demands for a six months' price agreement.

E. S. ROBBINS,
President Milwaukee Milk and Cream Producers' Association.



GRIF R. RICE,
Secretary and treasurer, Milwaukee Milk and Cream Producers' Assn.

These increased prices for the farmer-dairymen have come entirely through organization. Were not this organization able to control enough of the city's milk supply it could not negotiate to such advantage. The dealers have always preferred to deal with individuals; they know it is to their advantage, but the Milwaukee situation is not local. In every big city-supply district the dairymen have organized for their own protection.

The association now controls about 2,200 of the 5,500 cans of milk used daily by Milwaukee. This all comes from a health department inspected area. Were these 2,200 cans diverted into other channels it would seriously cripple Milwaukee's supply with the health department restricting the area. This the dealers realize and the negotiations that led to the new prices were conducted with the best of feeling apparent by all parties.

In July the association bought a creamery at Burwood, Milwaukee county, which is being operated to care for the surplus or turn-back when the city market is oversupplied. This was done at a cost of $3,000, but the butter has been selling for 2 cents above Elgin and the creamery is netting the association a pront of $150 per month. It can handle 150 cans daily, but the plan is to increase its capacity to about 900 cans. Surplus in other sections is turned to cheese factories or creameries and when it is possible for the association to so organize plants to take care of surplus milk it will be possible, in case of a crisis, to cut off Milwaukee's supply and turn it into these factories. This would mean no loss to the farmers and would be one method of forcing up the prices. The association also has other plans in view which will be unfolded as conditions warrant.

Operating expenses are covered by a tax of 2 cents per can on all milk and 10 cents per can on cream shipped by members. If every shipper were a member this could be reduced to about ¼ cent per can. The association keeps the records of all shipments and collects from the dealers for members.

There are now 750 members paid up who ship about 50 per cent of Milwaukee's supply. There are probably 1,200 shippers who are not members, but are profiting by the new prices secured by the association, as the association price stands for all.

The association is incorporated under the state laws for $10,000. Each member buys one share at $10 and is limited to one share. Of this amount $7,500 has been subscribed by the 750 members and there remains $2,500 in stock to be sold. Offices have been opened in the First National Bank, Milwaukee, and the officers are: President, E. S. Robbins; first vice president, Charles Dineen; second vice president, Edward Harland; secretary-treasurer, general manager, G. R. Rice. All these officers with the following directors operate their own farms: Albert Fuller, William Kerler, Thomas White, Michael O'Connel, Charles Schwerman, Robert McLevy, Edward Makovsky, John Wick and the officers named above.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright: Rand McNally & Co.)

PART III. "Prince Charlie"

CHAPTER IX—Continued.

"Not this morning, sonny," answered the other, still, with that altogether-aggressive taunt in his tone. "I would go back to the ranch if I was you, and by this time tomorrow some of them may make you forget the favor you want this morning. So long!"

And with this suggestion to his guest to vacate, he turned his back, sat down by the fire, and began filling a pipe.

"All right; I'll go, and in spite of your stubbornness, with a lighter heart than I carried here, for I've made you understand that I want to make amends, and that I have not been all a liar; that I want to win back the old faith you all had in me; and, Jack, if my head has gone wrong, something in my heart forbade me to have content, and that has been my only hope for myself. For I have a hope, and a determination, Jack, and as for anyone helping me to forget—well, you are wrong there; one woman might do it—for a while—I acknowledge that, but I am safe in knowing she would rather help me to remember."

Genesee wheeled about quickly.

"Have you dared—"

"No, I have not told her, if that is what you mean, why—why should I?"

His denial weakened a little as he remembered how closely his impulse had led him to it, and how strong, though reasonless, that impulse had been.

The stem of the pipe snapped in Genesee's fingers as he arose, pushing the camp stool aside with his foot, as if clearing space for action.

"Since you own up that there's someone about here that you—you've taken a fancy to, I'm going to tell you right now that you've got to stop that! You're no more fit than I am to speak to her, or ask for a kind word from her, and I give you a pointer that if you try playing fast and loose with her, there'll be a committee of one to straighten out the case, and do it more completely than that man did who was a fool ten years ago. Now, hearken to that—will you?"

And then, without waiting for an answer, he strode out of the shack, slamming the door after him, and leaving his visitor in possession.

"I've got to show him, by staying right in these hills, that I am in earnest," Stuart decided, taking the seat his host had kicked aside and stretching his feet out to the fire. "No use in arguing or pleading with him—there never was. But give him his own lead, and he will come around to the right point of view, though he may curse me up hill and down dale while he is doing it; a queer, queer fellow—God bless him! And how furious he was about that girl! Those two are a sort of David and Jonathan in their defense of each other, and yet never exchange words if they can help it—that's queer, too—it would be hard telling which of them is the more so. Little need to warn any man away from her, however; she is capable of taking very good care of herself."

There was certainly more than one woman at the ranch; but to hear the speech of those two men, one would have doubted it; for neither had thought it necessary even to mention her name.

CHAPTER X.

The Telling of a Story.

"BUT you promised! Yes, you did, Mr. Stuart—didn't he, Mrs. Hardy? There, that settles it; so you see this is your evening to tell a story. The protracted twilight, with its cool grays and purples, had finally faded away over the snow, long after the stars took up their watch for the night. The air was so still and so chill that the bugle call at sunset had sounded clearly along the litte valley from camp, and Fred thought the nearness of sound made a house seem so much more homelike. After the bugle notes and the long northern twilight, had come the grouping of the young folks about the fire, and Fred's reminder that this was to be a "story" night.

"But," declared Stuart, "I can think of none, except a very wonderful one of an old lady who lived in a shoe, and another of a house marvelously constructed by a gentleman called Jack—"

Here a clamor arose from the rebels in the audience, and from Fred the proposal that he should read or tell them of what he was working on at present, and gaining at last his consent.

"But I must bring down some notes in manuscript," he added, "as part of it is only mapped out, and my memory is treacherous."

"I will go and get them," offered Fred. "No, don't you go! I'm afraid to let you out of the room, lest you may remember some late business at camp and take French leave. Is the manuscript on the table in your room? I'll bring it."

And scarcely waiting either assent or remonstrance, she ran up the stairs, returning immediately with hands full of loose sheets and two rolls of manuscript.

"I confiscated all there was in reach," she laughed. "Here they are; you pay no money, and you take your choice."

She was such a petite, pretty little creature, her witchy face alight with the confidence of pleasure to come; and looking down at her, he remarked:

"You look so much a spirit of inspiration, Miss Fred, that you had better not make such a sweeping offer, lest I might be tempted to choose you."

"And have a civil war on your hands," warned Rachel, "with the whole camp in rebellion."

"Not much; they don't value me so highly," confessed Fred. "They would all be willing to give me away."

"A willingness only seconded by your own." This from the gallant lieutenant on the settee. "My child, this is not leap year, and in the absence of your parent I—"

"Yes, I know. But as Captain Holt commands in papa's absence, I don't see what extra responsibility rests on your shoulders. Now, Mr. Stuart, all quiet along the Kootenai; go ahead."

"Not an easy thing to do," he answered ruefully, trying to sort the jumbled lot of papers she had brought him, and beginning by laying the rolls of manuscript on the table back of him, as if disposing of them. "You have seized on several things that we could not possibly wade through in one evening, but here is the sketch I spoke of. It is of camp life, by the way, and so open to criticism from you two veterans. It was suggested by a story I heard told at the fort."

Just then a wild screech of terror sounded from the yard, and then an equally wild scramble across the porch. Everyone jumped to their feet, but Rachel reached the door first, just as Aunty Luce, almost gray from terror, floundered in.

"They's come!" she panted, in a sort of paralysis of fright and triumph of prophecy. "I done tole all you chillen! Injuns! right here—I seed 'em!"

Hardy reached for his gun, the others doing the same; but the girl at the door had darted out into the darkness.

"Rachel!" screamed Tillie, but no Rachel answered. Even Hardy's call was not heeded; and he followed her with something like an oath on his lips, and Stuart at his elbow.

Outside, it seemed very dark after the brightness within, and they stopped on the porch an instant to guide themselves by sound, if there was any movement.

There was—the least ominous of sounds—a laugh. The warlike attitude of all relaxed somewhat, for it was so high and clear that it reached even those within doors; and then, outlined against the background of snow, Stuart and Hardy could see two forms near the gate—a tall and a short one,

PERTH AMBOY CHEMICAL WORKS
FORMALDEHYDE
O.K.

Uncle Sam's O. K.

The U. S. Dept. of Agriculture gives its endorsement to *the* standard seed disinfectant—

FORMALDEHYDE
The Farmer's Friend

Greatest yield secured first by ridding seed grains of smuts and fungus growth. Formaldehyde is the cheapest and best disinfectant for stables, kennels, chicken houses and cellars—it also kills flies. Formaldehyde in pint bottles, 35 cents at your dealer, treats 40 bushels of seed. Write for new book reporting U. S. Dept. of Agriculture's experiments in seed treatment—FREE on request.

and the shorter one was holding to the sleeve of the other and laughing.

"You and Aunty Luce are a fine pair of soldiers," she was saying; "both beat a retreat at the first glimpse of each other. And you can't leave after upsetting everyone like this; you must come in the house and reassure them. Come on!"

Some remonstrance was heard, and at the sound of the voice Hardy stepped out.

"Hello, Genesee!" he said, with a good deal of relief in his manner; "were you the scarecrow? Come in to the light, till we make sure w're not to be scalped."

After a few words with the girl that the others could not hear, he walked beside her to the porch.

"I'm mighty sorry, Hardy," he said as they met. "I was a little shaky about Mowitza today, and reckoned I'd better make an extra trip over; but I didn't count on kicking up a racket like this—didn't even spot the woman till she screeched and run."

"That's all right," said Hardy reassuringly. "I'm glad you came, whether intentionally or by accident. You know I told you the other day—"

"Yes—I know."

Rachel and Stuart had entered the house ahead of them, and all had dropped back into their chosen points of vantage for the evening when assurance was given that the Indians belonged to Aunty's imagination; but for those short seconds of indecision Tillie had realized, as never before, that they were really within the lines of the Indian country.

Aunty Luce settled herself sulkily in the corner, a grotesque figure, with an injured air, eyeing Genesee with a suspicion not a whit allayed when she recognized the man who had brought the first customs of war to them—taking nocturnal possession of the best room.

"No need tell me he's a friend o' you all!" she grunted. "Nice sort o' friend you's comin' to, I say—lives with Injuns; reckon I heard—umph!"

This was an aside to Tillie, who was trying to keep her quiet, and not succeeding very well, much to the amusement of the others within hearing, especially Fred.

Genesee had stopped in the outer room, speaking with Hardy; and, standing together on the hearth, in the light of the fire, it occurred to the group in the other room what a fine pair they made—each a piece of physical perfection in his way.

"A pair of typical frontiersmen," said Murray, and Miss Fred was pleased to agree, and add some praise on her own account.

"Why, that man Genesee is really handsome," she whispered; "he isn't scowling like sin, as he was when I saw him before. Ask him in here, Mrs. Tillie; I like to look at him."

Mrs. Tillie had already made a movement toward him. Perhaps the steady, questioning gaze of Rachel had impelled her to follow what was really her desire, only—why need the man be so flagrantly improper? Tillie had a great deal of charity for black sheep, but she believed in their having a corral to themselves, and not allowing them the chance of smutching the spotless flocks that have had good luck and escaped the mire. She was a good little woman, a warm-hearted one; and despite her cool condemnation of his wickedness when he was absent, she always found herself, in his presence, forgetting all but their comradeship of that autumn, and greeting him with the cordiality that belonged to it.

"I shall pinch myself for this in the morning," she prophesied, even while she held out her hand and reminded him that he had been a long time deciding about making them a visit.

Her greeting was much warmer than her farewell had been the morning he left—possibly because of the relief in finding it was not a "hostile" at their gate. And he seemed more at ease, less as if he need to put himself on the defensive—an attitude that had grown habitual to him, as it does to many who live against the rulings of the world.

She walked ahead of him into the other room, thus giving him no chance to object had he wanted to; and after a moment's hesitation he followed her, and noticed, without seeming to look at any of them, that Rachel stood back of Stuart's chair, and that Stuart was looking at him intently, as if for recognition. On the other side, he saw the lieutenant quietly lay his hand on Miss Fred's wrist that was in shadow, just as she arose impulsively to offer her hand to the man whom she found was handsome when he had the aid of a razor. A beard of several weeks' growth had covered his face at their first meeting; now there was only a heavy mustache left. But she heeded that silent pressure of the wrist more than she would a spoken word, and instead of the proffered hand there was a little constrained smile of recognition, and a hope given that Aunty Luce had not upset his nerves with her war cries.

He saw it all the moment he was inside the door—the refined face of Stuart, with the graciousness of manner so evidently acceptable to all, the sheets of manuscript still in his fingers, looking as he stood there like the ruling spirit of the cheery circle; and just outside that circle, though inside the door, he—Genesee—stood alone, the fact sharply accented by Miss Fred's significant movement; and with the remembrance of the fact came the quick, ever-ready spirit of bravado, and his head was held a trifle higher as he smiled down at her in apparent unconcern.

"If it is going to make Aunty Luce feel more comfortable to have company, I'm ready to own up that my hair raised the hat off my head at first sight of her—isn't quite settled into place yet;" and he ran his fingers through the mass of thick, dark hair. "How's that, Aunty?"

"Umph!" she grunted, crouching closer to the wall, and watching him distrustfully from the extreme corner of her eye.

(To be continued.)

A happy Christmas thought—

KODAK

The gift that adds to the good times at the moment; that indoors and out gives zest to the merry making *and then*—preserves the happy picture story of all that goes to make the day a merry one.

The Kodak catalogue, free at your dealer's, or by mail, tells in detail about the various Kodak and Brownie cameras—from $1.25 upward. Photography is really very simple and inexpensive. Kodak has made it so.

A Few Wisconsin Road Problems

Manitowoc County Convention of Road Supervisors Takes Up Matters of Importance to Every Farmer Who Uses the Roads.

A COUNTY road convention of unusual importance was held November 17th at Manitowoc, Wisconsin. The idea started with several members of the county board and good roads enthusiasts in the Manitowoc Chamber of Commerce. Someone named this gathering the Pathmasters' Convention. While the gathering was primarily intended for road superintendents, town chairmen and supervisors it outgrew the original idea of a conference and developed into a mass convention in the interest of better roads in Manitowoc county. A large number of persons, not supervisors, nor directly connected with the building of roads were present. Frank Muth, county highway commissioner, and C. W. Meisnest, county superintendent of schools, were enthusiastic supporters of the meeting. Out of a total of about 375 superintendents and supervisors in this county 250 were present. The convention in a large measure has dispelled some local prejudices against increased expenditures for good roads. Among the subjects discussed were: "Travel and Macadam Roads;" "Use of the Road Drag;" "Concrete Culverts and Bridges;" "Powers and Duties of Town Boards and Road Superintendents," and other problems which came up in the question box.

A banquet was served at Turner Hall. The speakers were: J. S. Smith, editor of the Wisconsin Motorist; A. R. Hirst, Wisconsin State Highway Engineer; F. X. Murphy, chairman of the transportation board, Manitowoc Chamber of Commerce.

The motto of the convention was: "Good roads. One hundred cents on the dollar. Sixty minutes to the hour."

Subjects of importance discussed may be classified as follows:

Surface.—Should roads be filled, and if so, should the work be done in the spring or fall, or both?

What is the cheapest in the long run considering cost, up-keep and service, gravel, macadam or concrete?

Mud Holes.—Mud holes increase the cost of travel. They can be prevented by properly crowning the road. They can be filled up and dried by using road drags.

Loose Stones.—These spoil hoofs and tires. They can easily be raked off. Whose duty is it to do it? Stone chips can be rolled smooth and packed, but why would it not be better to use finely crushed filler?

Mountain Peaks.—These should not be used as substitute for road crowns. Should dirt and sod from the side of the road be dumped into the center, and what is the Wisconsin law on this subject?

Railroad Crossings.—Railroad crossings are man killers. The greatest danger can be avoided by providing a gradual approach to crossings and having crossings planked inside and out, level with the top of the rails. Sudden rises to crossings have stalled many autos in front of onrushing trains.

Guide Boards.—The Wisconsin law requires them with black letters two inches or higher on white boards. Letters painted with lamp black and boiled linseed oil will last for thirty years. Warning and speed limit signs are just as important.

Miscellaneous.—Should each town own and operate a stone crusher?

Narrow passageways cause collisions. In case of swamp road have turn outs at convenient intervals.

Obstructions to view are dangerous. Drivers can better see how wide the road is if the weeds are cut. Whose duty is it to remove obstructions to view of curves and railroad tracks?

One town in Manitowoc county has eight road districts; another has thirty-five. What is the best number?

Vehicles will not slip over the edge of fills and bridges if there is a strong railing.

It was generally agreed at the conference that township chairmen should call their road superintendents together before spring work starts and have a township conference.

This will interest the "Women Folks" — Let them Read it First

Farmers need a change. This includes the "women folks." They need to get away more than anybody else. That's why California appeals to them. It's so different from back home.

In California you never are "frozen up." There every day is a summer day — for work or play. There crops grow the year 'round. There you can always have something ready to market. There live-stock needs little shelter. Nature is more friendly. Not so much of your effort is necessary "just to live." Schools and churches? None better.

California adds fifteen years to the average life.

Hasn't California always appealed to you? **Wouldn't you like to live there?**

Would you like to know how reasonably you can make the trip, the cost of the round-trip ticket, good nine months — the things to see on the journey — the opportunities for the farmer who desires to live in California? Then drop me a postal to-day, saying "Send California books."

Our book, **"San Joaquin Valley,"** tells about this great valley, 40 to 90 miles wide and 250 miles long, in the heart of California — its productive soil — its ever-growing climate — its ample water — its abundant crops and hungry markets.

"Dairying in San Joaquin Valley" is another book that tells of the extra profits in dairying under California conditions.

"Poultry Raising in San Joaquin Valley" dwells on the successes made in this line, especially by women.

All these books are free, as well as the special information which we will gladly give you if you will tell us what you have and what you want to do.

Personally-conducted excursions three times a week in tourist sleepers enable the family to travel cheaply and comfortably with pleasant neighbors and learn about California at first hand. Thousands of Eastern farmers save money by living in California during the winter season.

C. L. Seagraves, Industrial Commissioner, A. T. & S. F. Ry.
2248 Railway Exchange, Chicago

Warm water brings milk

A good tank heater pays its cost every month on most dairy farms. For warm water makes cows give more milk than icy cold water. See page 1444 of our big General Catalog for prices.

Potato Show Awards.

The following are the standard variety awards at the recent Wisconsin Potato Show held at Eau Claire:

Rural New Yorker—1st E. H. Thompson, Mikana; 2d Mrs. Ed Thompson, Mikana; 3d Ed Kringle, Rice Lake; 4th Clark G. Kuney, Three Lakes; 5th F. S. Campbell & Sons, Three Lakes; 6th Moss & Lavis, Kempster; 7th J. W. Smith, Kent; 8th Eric Michelson, Pembine; 9th Anton Follstad, Elcho; 10th Charles Beard, Elcho; 11th Gust Kringle, Rice Lake; 12th Cedar Lake Stock Farm, Mikana.

Green Mountain—1st A. T. Johnson, Angus; 2d T. S. Campbell & Son, Three Lakes; 3d W. P. Jensel & Sons, Rhinelander; 4th John F. Hauser, Bayfield; 5th S. J. Uhrenholt, Hayward; 6th John Chelmo, Webster; 7th Ralph H. Clark, Tomahawk; 8th Hall L. Brooks, Tomahawk; 9th John Peterson, Webster.

Burbank—1st Gust Kringle, Rice Lake; 2d Chas. Parsons, Antigo; 3d John F. Hauser, Bayfield; 4th Ed Kringle, Rice Lake; 5th Karl Hazelberg, Barron; 6th Mr. Risten, Leef.

Triumph—1st T. S. Campbell, Three Lakes; 2d J. W. Smith, Kent; 3d Eric Nickelson, Pembine; 4th W. L. Quaas, Dunbar; 5th Lewis Winter, Antigo; 6th Mr. Peterson, Webster; 7th John F. Hauser, Bayfield.

Early Rose—1st John F. Hauser, Bayfield; 2d E. R. Risten, Webster.

Irish Cobbler—1st F. S. Campbell & Son, Three Lakes; 2d Oscar Nelson, Antigo; 3d J. M. Nelson, Antigo.

Any Other Variety—1st John F. Hauser, Bayfield; 2d Swan Olson, Hayward; 3d J. Lassig, Rhinelander; 4th J. G. Grandine, North Crandon; 5th Mr. Dorriet, Webster; 6th John Chelmo, Webster; 7th Chas. Parsons, Antigo.

Growing Onions.

In an address before the ninth annual convention of vegetable growers in Chicago recently, L. R. Jones, of the Wisconsin College of Agriculture, discussed clear seed and sanitation; also crop rotation. In discussing the onion he said:

Its worst diseases are borne on the seed or sets and persist in the soil. Yet we wish to grow onions without rotation. For the smut, formalin should be used as a soil disinfectant by attaching a drip tank to the seeder, applying formalin in the drill. This simple measure may double the yield. Use one pint formalin to sixteen gallons water at the rate of one gallon to 185 feet of row, 200 gallons per acre. In addition it is to be noted that with this and also with smudge or anthracnose and the rot the germs are distributed on the bulbs from diseased fields. The practice of plowing under old bulbs as fertilizer on the onion soil is decidedly unsanitary and sure to bring trouble sooner or later. Put them on potatoes or other fields.

Law Questions.

Peddler's License.

A Subscriber, Blue River, Wis.—(1) What is the cost of a peddler's license in Wisconsin? (2) Is such license good for the sale of any kind of goods? (3) How can a person obtain a peddler's license? (4) Does the law allow a cripple, or a person unable to do manual labor, to peddle goods without a license?

Answer.—(1) With a two-horse vehicle or automobile $75 per year; with a one-horse vehicle $45 per year; with a push cart $30 per year; with a pack on foot $20 per year. (2) It is. (3) Apply for the license to the secretary of state at Madison, Wisconsin. (4) It does not.

Fraud in Horse Deal—Set-Off.

A Subscriber, Weyerhauser, Wis.—Last spring I bought a team and gave my note for the price and a chattel mortgage on a sleigh and wagon to secure the note. The team was misrepresented to me when I bought it. Can the holder of the note collect it and take the sleigh and wagon on the mortgage?

Answer.—If the man who sold the team to you still holds the note and mortgage and sues you for the debt you can defend by proving his misrepresentation and set off your claim for damages against his claim on the note, but if he has sold the note and mortgage before due, to an innocent purchaser, such purchaser can take the sleigh and wagon.

It will soon be time to cut scions of apple trees for use in grafting next year. Store these in sand or sawdust. They should neither become dry enough to shrivel nor moist enough to start growth.

"Heat Means Meat"

A cold hog is a lean hog; a warm hog without proper ventilation is a sick hog.

The profitable way to winter your hogs is in a cozy but well ventilated hog-house, built according to our FREE PLANS, and built of the farmer's stand-by,

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Probably Tuberculosis.

I have a cow, three years old, that was fresh in January, 1916. She gave milk five months. She is a full-blooded Jersey cow. She took sick and lost all her flesh, her milk gave out and she went dry all at once. She has swelling of the glands. The swelling is right under the throat. She eats well and drinks well. I never have heard her cough and she has no running of the nose. She had one calf and is not with calf now.

It is possible your cow is affected with tuberculosis even if she hasn't a cough. If you prize this cow we would advise you to have her examined and tested by a competent veterinarian.

Bloody Milk.

I would like to know what is the matter with my cow. She is nine years old. She seems in good health but she has been giving bloody milk out of one of her teats for six weeks. Have given her saltpeter, but she is getting worse instead of better.

There are so many causes of bloody milk that it would be hard to prescribe here unless we knew the cause. If you are feeding the cow on high-grade feed cut her ration down some. See that she gets no irritating food, such as acrid plants, moldy plants, etc. There may be some trouble in the teat itself, such as tubercle or tumerous growth, and there would be very little help for such a condition.

Digestive Disturbance.

My cow has recently lost her appetite and she is getting very poor and weak. This cow is four years old. She went entirely dry. She has been sick for about two months. Her eyes are sunk back in her head. Her weakness is mostly in her hind parts. We have given her one small dose of linseed oil, but have given her no other treatment.

We are not positive as to what ails your cow, but it may be a severe digestive disturbance. However, it may be some other trouble which would call for a close examination by a veterinarian. Try the following, which you may get at any drug store: Fluid extract of nux vomica (two ounces), fluid extract of gentian root (two ounces). Have this put up at the drug store and give two teaspoonfuls as a dose in a pint of water. Repeat this three times a day. Give the animal any food she will eat.

Piles.

We have a three-year-old black Jersey heifer that prematurely lost her first calf last fall. She was milked, however, and is not quite dry now. Is due to freshen December 21st. A few days ago she seemed to become constipated and when the bowels move there is a protrusion of the bowel, with bleeding. If replaced will appear all right till next movement. Are we likely to lose her when she freshens?

Your cow is affected with piles from some cause or other. Try giving her a pint of raw linseed oil every day or every other day. Apply externally fluid extract of hamamelis, and inject some into rectum. If there is much itching and pain apply an ointment composed of extract belladonna, one dram, and vaseline, eight drams. Apply externally. She may calve with some trouble, but may be all right after calving.

Leucorrhea.

Will you please tell me what ails one of my cows. She freshened last May and cleaned herself, then she did not come in heat until August 10th. I had her bred, but she came in heat again around September 20th and I had her bred to another bull. She has come in heat twice since, but I did not breed her. I noticed a whitish discharge comes from her every now and then. She is around nine years old and a Holstein. Has been in good pasture all summer, with plenty of water and salt. She is also in not very good condition, always poorer than the rest of the herd.

Your cow in all probability is affected with leucorrhea. This has either been brought about through some internal or external influence that has had a bad effect on the mucous membranes of the passage. Treatment with injections of antiseptic solutions, such as a teaspoonful of lysol to a pint of water made in large quantities, may benefit milder cases. In obstinate ones stronger solutions may be used after the womb has been washed out by a stream of tepid water until it comes clean. A rubber tube is inserted into the womb, a funnel placed in its raised end and the water and afterwards the solution poured slowly through this. If the neck of the womb is so close that the liquid cannot escape a second tube may be inserted to drain it off. As injections may be used chloride of zinc, one-half dram to a quart of water, or sulphate of iron, one dram to a quart of water. Three drams of sulphate of iron and one-half ounce ground ginger may also be given in the food daily.

DR. DAVID ROBERTS'
COLIC DRENCH

Your horse kicks at his stomach—paws—lies down—gets up—lies down—rolls over on his back. Make sure it's colic. Do something quick! You can save his life if you are ready with *Dr. David Roberts' Colic Drench* to allay the pain, to liquefy the poisonous gases and stimulate the paralyzed bowels. Get it, have it ready in the stable. Learn when to drench, how to drench, by studying the "Practical Home Veterinarian."

Dr. Roberts' Physic Ball and Horse Tonic prevent constipation and keep bowels open. One Physic Ball equals a month of grass.

Fever Paste acts on mucous membrane of the throat and overcomes distemper, fever, colds, etc. Use *White Liniment, Heave Powder, Gall Balm, Antiseptic Poultice and Breeding Tonic.*

Get Dr. Roberts' Live Stock Prescriptions at your drug store—nearly 4000 dealers in U. S. Look for and insist on getting the package that bears Dr. Roberts' picture. Send $1.00 for copy of 184-page "Practical Home Veterinarian," treating *all* diseases of live stock. Address

Do This For Your Thriftless HORSE

Help Him Win the Fight Against Worms

If any of your horses are thin, listless, dull eyed, rough coated, off-feed, bite the manger, or rub tails against the stall, look out for **worms.** These parasites cause indigestion, sap the vitality and impair health and strength. You can restore condition, tone and endurance, by destroying the worms with Sal-Vet.

This popular preparation destroys free intestional worms and stomach worms (except bots). It aids digestion, so what you feed develops strength and endurance;—horses shed earlier;—the coat becomes smooth and glossy. Money back from your dealer if SAL-VET fails to do as I claim.

SAL-VET
The Great Worm Destroyer
The Great Live Stock Conditioner

Fill out the coupon below and I will send you a valuable SAL-VET Live Stock Book free, and give you the name of my nearby dealer, from whom you can get enough SAL-VET to last all of your stock sixty days. He will refund your money if SAL-VET fails to rid them of stomach and free intestinal worms and put the animals in good condition. Address:—

Lighting the Farm Home.

Home lighting is an important question and it confronts us squarely when the evenings lengthen and the season arrives when the family spends many hours working, reading, playing by artificial light. A poor light is the poorest economy. Adequate lighting facilities are more expensive in the beginning than a kerosene lamp, but equally expensive is expert care of the eyes once they have been strained by working in a poor light.

Time was when the kerosene lamp was about the best that could be done for the farm home, and an improvement it surely was over the tallow dip. But that time has passed. Today, with gasoline lamps, denatured alcohol lamps, home gas and electric plants perfected, the farm home may be as well lighted as the city home.

In selecting the type of plant to be installed many things must be considered—initial outlay for installation, adaptability to existing conditions,

The shaded reading lamp that may be used in any room is an important part of the home lighting system.

cost and convenience of operation. The light giving good service with minimum cost, safety and efficiency is the one to be sought.

To begin with, the simplest and least expensive system, the sum of $5 to $10 will purchase one or more very efficient oil or gasoline lamps. These lamps are so perfected that they rival even electricity in the light they produce. They may be had in bracket form, to be carried from room to room, or as a hanging lamp, a combination of the two making a very satisfactory system for an ordinary six or seven-room house.

It is desirable, however, to have a lamp for each room. For this purpose there are many lighting systems using gasoline in common use. These are constructed with a reservoir for the gasoline, placed at a convenient, yet safe, distance from the burner, the gas being produced by passing the gasoline through a small tube over or around the heated burner, the gas burning inside a mantle, thus producing a white light. Some of these are self-generating and may be lighted by

A central ceiling lamp throws the light to all parts of the room so that there are no dark, shadowy corners.

simply applying a match, while others must be generated. It is estimated that $25 will cover the cost of supplying such lights to each room of a seven-room house, even including the basement, or for perhaps twice this sum the whole system may be operated from a central low pressure supply tank which is placed in the basement or outside of the building. The placing of the gasoline supply tank outside the building is a favorable point, though the individual lamps are considered safe.

Nor is it any longer necessary for a farm to be located on an electrical line in order to have electric lights if that is the type preferred, for any farm may have these by installing its own little plant. The perfection of the gasoline engine and the modern filament electric light globe make this possible. Of course, the original cost of such a plant runs up to $200 to $500, but besides the lighting they furnish power for washing, pumping water, and make possible for the farm housewife such conveniences as the electric iron, toaster, vacuum cleaner, sewing machine motor, so that her labor is materially cut down. Electric lights are safe. They are safe for the house and they are safe for the outbuildings. They save caring for lamps, and after the first cost they are considerably cheaper per candle power hour than kerosene lamps.

The arrangement of lamps should be given careful thought. A study of conditions will save many a desire to change the location of a lamp after it has once been installed.

Cretonne Work Basket.

To the Editor:—Somewhere I have seen a work basket made of cretonne and mounted on legs made of broom sticks. I thought it was very pretty and I want to make one, but do not know how to go about it. I thought perhaps some of the readers of the Home page may have made similar baskets and can tell me how to do it. As I remember it the basket is round and the three broom sticks cross beneath the basket and stand on the floor. The basket is lined with silkoline. I want to know how large to make the circle of the bag and how to fasten the broom sticks to it. Should there be a wire in the top of the back to fasten the broom sticks to or is there a draw string in the top of the bag? If any of the readers know how this is done I would be pleased to have them tell us how. E. B.

Food Value of Corn.

A comparison of the various articles of food shows that a pound of corn worth 3 cents is equal in food value to 64 cents' worth of eggs, 41.5 cents' worth of round steak, to 35 cents' worth of cabbage, to 14 cents' worth of potatoes or to 10 cents' worth of bread. Based on its food value, corn in the form of meal or hominy is the cheapest foodstuff obtainable. Mush, hominy or corn flakes, when prepared in the home, are wholesome, readily digested and cost less than one-tenth as much as the average priced breakfast food.

Would Take Things in Her Own Hands.

To the Editor:—In the issue of October 19th among the editorials I read one entitled "A Household Tragedy," and, having read many other similar complaints, I will give you my views on the subject.

It seems this lady is very capable. She says she could teach. It seems she has been assisting her husband in addition and multiplication with a very little subtraction, but when it came to division he did not care to divide, so after vain attempts to get him to do so she quit.

She might write to all the papers published and state her grievance and get good advice, but I believe if her husband ever learns division she will have to teach it to him. Where there's a will there's a way. She says they have sixteen horses, yet she walks seven miles. If I could walk seven miles I could catch a horse, harness and hitch him if my husband or hired man would not do it for me. If he refused his help I would tell him I would walk no more and would get the horse myself if I could. If I could not I would walk rather than stay at home. But I would not walk back. I would telephone him to come after me. If he refused I would get a livery to take me home. If he was angry I would be angry also that he had not done as I wished. I would tell the livery man that my husband would settle with him. I would go on about my work as usual, and if his manner was cold and haughty I would be cold and haughty also. If he would talk about my actions, so much the better; I would argue the case with him to the finish. I would show to him my every thought on the subject; I would tell him I had meditated much on the subject of partnership between man and wife; that I knew my rights; that for ten years I had been trying to tell him I had rights to some dividend, but could not make him see it, and now I demanded those rights of him.

When shopping I would look at some article I wanted (in his presence if possible). If a dress, I would ask him if he did not think it pretty and if he did not think it would be becoming to me. If I decided I wanted it and he could afford it I would say, "Please do this up for me and Mr. ——— will settle for it." Perhaps he would call me to task about it on the way home or after our arrival. If he joked about it and twitted me for having high-fangled notions I would joke him about his purse—that the straps were rather tight and needed loosening. If he got angry I would meet him on that score. I would show him I was not afraid of him, his jokes or his anger, that I was his life partner and his equal in every respect.

I fancy I hear this woman say, "I would never enjoy wearing that dress." No, nor would I, but I would wear it—I would act as proud of it as though he had brought it home to me as a gift.

I cannot go on and tell just what I would do in everything, but I would divide for him if necessary until he learned division was as necessary as addition. Perhaps this woman would not like the break in the peace of the home, but there was never a battle where the right principle was fought for and upheld but that the bond was stronger when peace was declared. As it is they are drifting apart; she is cherishing ill feeling toward the man she loves; he has placed the purse between them, and as the purse gains in size so the rift is widening. She is his slave; he is her master. He is a good, kind, loving master, but her master nevertheless. Will she undertake the task of teaching him division or will she quit at addition and multiplication? Is she a "quitter?"

—Nellie.

Recipes.

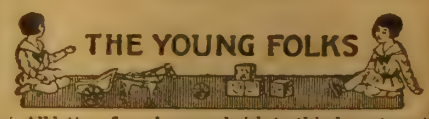
Baked Sliced Ham.—Two pounds sliced ham, two teaspoonfuls minced onion, two teaspoonfuls minced parsley, juice of half a lemon to each slice of ham. Slice the ham one-half inch thick; remove fat nearly to the lean and chop it fine. Mince the onion and parsley, mix with the fat and spread over the ham, which should be put into a dripping pan. Squeeze over the ham the lemon juice, and bake till tender in a moderate oven, from thirty to forty minutes. Make a gravy from the drippings in the pan.

Cream of Celery Soup.—One and one-half cupfuls lamb or chicken stock, one and one-half cupfuls milk, one-half cupful cream, twelve stalks celery, one potato, one small onion, two sprigs parsley, bit of bay leaf, few grains mace, two tablespoonfuls butter, one and three-fourths tablespoonfuls flour, salt and pepper to taste, few grains soda. Prepare vegetables and chop them all together till very fine; add to the stock and let simmer till tender, about thirty minutes. Heat the milk, mace and bay leaf together in a double boiler, add the stock and vegetables, together with the soda and then stir in the butter and flour, which should be creamed together. Season to taste, cook ten minutes, add cream, which should be scalded, and serve at once.

Sweet Cider Jelly.—Two tablespoonfuls gelatine, one-half cupful cold water, three cupfuls sweet cider, sugar, one-half cupful boiling water. Soak gelatine five minutes in the cold water. Dissolve in the boiling water, add cider and sugar to taste. Stir until the sugar is dissolved. Strain into a mold, first dipped in cold water, and chill.

Carrot Pudding.—One-half cupful butter, one cupful sugar, one cupful grated raw carrot, one cupful grated raw potato, one and one-half cupfuls flour, one-half cupful raisins, two eggs, one teaspoonful soda, one-half teaspoonful cinnamon, one-half teaspoonful cloves, one-half teaspoonful nutmeg. Cream butter; add sugar and eggs; beat thoroughly; add grated vegetables and soda. Mix dry ingredients and fruit and add gradually to first mixture. Pour into buttered molds and steam three hours. Serve with foamy sauce.

Foamy Sauce.—Two egg whites, one cupful powdered sugar, one-fourth cupful cream, one teaspoonful vanilla. Beat eggs; add sugar gradually and continue beating; add milk and vanilla.



All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Liked Melva's Letter.

Dear Young Folks.—I surely enjoy reading the letters from boys and girls. I read them aloud to my sister Jennie and to my mamma. We all enjoy them. I am twelve years old and am in the seventh grade. I go to a country school. We call it the City View School. Our teacher bought a swing and a store-keeping outfit for us. The boys made us some shelves for our store. We play in the woodshed with our store on rainy days.

I can do fancy work and crochet and I like to get new patterns for crocheted lace. We have a sewing club in school called the Busy Fingers. We learn to crochet and such things.

I think I liked Melva's letter the best of any I ever read. She asked the riddle: Here sits an Indian on a stump; he is my son, but I am not his father. The answer to it is his mother. —Hazel.

The Two Sisters.

The two sisters have no mother or father. They live on the farm with their grandparents. They like it very much out there. Their names are Helen and Gertrude.

One day they asked their grandma if they could go out walking and she said they could if they would not go too far.

They went down the lane that led to the road and little Gertrude, who was always into mischief, said, "Let's go a little bit farther." Helen said, "You can if you want to, but I won't." So Helen went home.

Her grandma asked her where Gertrude was and she said, "She went a little farther on." Her grandma said if little girls didn't mind something would happen to them.

As Gertrude was walking along the road she saw something that looked like eyes. It happened to be the eyes of a wolf. It scared her, so she began to scream and call for her grandma, but her grandma did not hear and could not return her call. She ran all the way home, not turning at all, but keeping right on straight till she came to the lane that led to the house. When she got to the house she was tired and out of breath.

When she went in the house her grandma said that naughty little girls always got into trouble and Gertrude promised that she would always mind after that, because she had learned a lesson. Her grandma said that she thought it was best to do right.

After that when Gertrude went out walking she didn't go any farther than her grandma told her to.

—Tiny Johnson, Age 12.

Perfection
Smokeless Oil Heater
is a regular little furnace of heating energy

The Perfection Smokeless Heater is indispensable in the home, no matter what heating facilities you have—the bathroom is too cold for baby's bath, the sewing room is chilly, the living room is not comfortable, the laundry, the basement, the attic, all have cold corners.

Get a Perfection Smokeless Heater today. It burns kerosene. Cheap and always available. Any good kerosene will give satisfaction, but for best results use Perfection Oil.

No smoke—no dust—no odor—no ashes. Just plenty of sweet, warm air that makes home, home.

Weighs 12 pounds, is only 25 inches high and 12 inches in diameter. Finished in highly polished steel or blue enamel. Trimmings are black Japan or nickel.

Easy to light—lift the drum and touch a match. Regulate flame as desired. No need to worry about flame getting too high. Automatic lock flame spreader prevents that.

Can be carried about the house easily—handle never gets hot.

Perfection Smokeless Heater varies in price from $4.00 to $7.25 according to finish. Look for triangle trade mark.

Sold by all reliable dealers.

Rayo Lamps give that soft, mellow light which enables you to read without eye strain. Get one.

1532—Juniors' dress. Pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 5¾ yards of 36-inch material for a 14-year size.

1515—Girls' middy dress with skirt attached to an underwaist and with sleeve in either of two lengths. Pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 4½ yards of 44-inch material for a 10-year size.

1594—A fashionable skirt. Pattern is cut in 6 sizes: 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 4 yards of 44-inch material for a 24-inch size.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for December 10, 1916.

Faithful Unto Death.

LESSON TEXT—Rev. 2:1-17.
GOLDEN TEXT—Be thou faithful unto death, and I will give thee the crown of life.—Rev. 2:10.

This passage most wonderfully illustrates that dominating purpose of Paul's life. More than most lessons a map will be necessary to locate distinctly the places mentioned. There are interesting stories in connection with each of the seven cities and churches. It might be wise to give to seven different people the task of bringing information to the class regarding each one mentioned.

I. Ephesus, Whose Love is Waning (vv. 1-7). The key word to these messages is the word "overcometh." In each of the messages our Lord describes himself in a different way according to the peculiar needs of that particular church. Here he is represented as holding the stars (messengers of the churches, Ch. 1:20) in his right hand, and keeping them secure, controlling them while he walks in the midst of the seven golden lamp stands, literally churches. The symbolism of "lamp stand" is used because the churches were intended to be light bearers as they held forth the light given by the oil of the Spirit (Math. 5:16; Phil. 2:16; Zech, 4:2-6). Ephesus was the capital of a province said to be one of the richest in the Roman empire. In it was the great temple of Diana. Here Paul had labored and had various experiences, and to Ephesus he had written a letter (See lesson 8, third quarter) but there were good things to be found in this Ephesian church (vv. 2,3). Forty years after being founded, John writes this message. He knew their "works," their general moral conduct, especially its active and passive sides through its trials, its dealing with impostors and its practical energy and enterprise; and its patience (literally steadfast assurance) in bearing witness for Christ. Jesus knew of their never wearying endurance. Surely these things would indicate pretty nearly a model church. Jesus says: "No, there is something seriously wrong," so seriously wrong that unless repented of he would remove them out of their place.

II. Smyrna, the Church With a Crown of Life (vv. 8-11). Smyrna was forty or fifty miles from Ephesus, and at this time a city of 250,000 inhabitants. To this church the Son of Man (Ch. 1:11) sends another message. It is interesting to note that this church and the one at Philadelphia received from the Master unqualified praise. It had works, activities; it also had tribulations, riches and poverty (for thou art rich) rich in good works, rich toward God, rich in treasures laid up in heaven; however, it was in the midst of persecution. It was here that Polycarp labored, who afterward, as bishop of Smyrna, was martyred (see v. 10). Of Polycarp it is said that rather than save his life by renouncing Christ he cried out, "Eighty and six years have I served him, and he has done me no ill; how then can I blaspheme my king who hath saved me." The crown is eternal life, the crown of victory. The second death is the final condemnation which sinners undergo at the judgment seat of God.

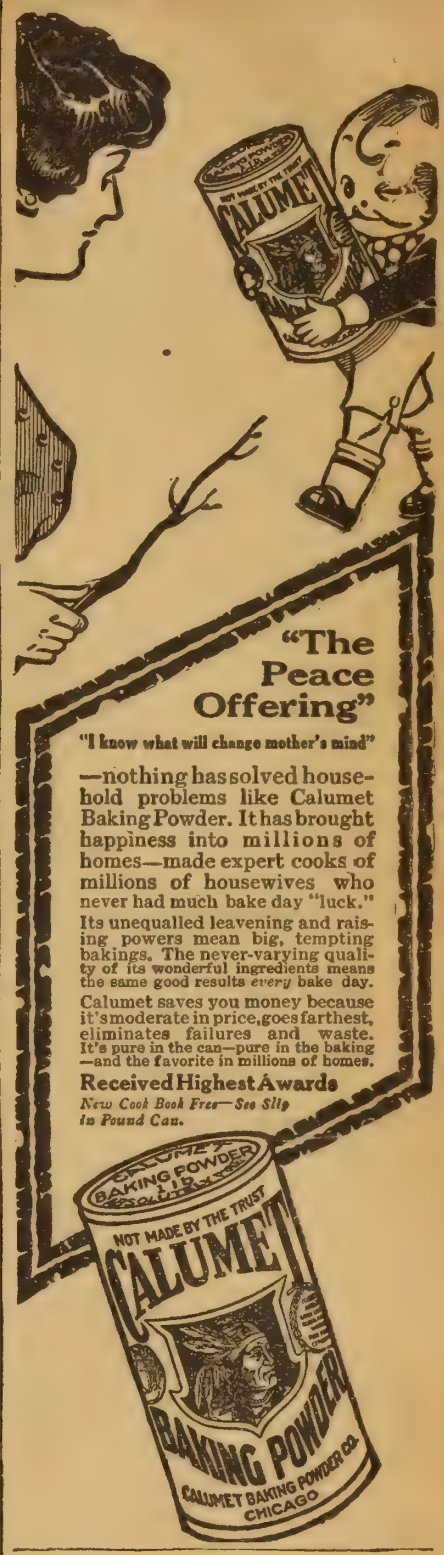
III. Pergamos, the Church in a Stronghold of Faith (vv. 12-17). Our glorified Lord knew that the church in Pergamos was in a peculiarly difficult situation, that it was Satan's headquarters, his "throne" (v. 13); hence they were in especial need of a defender and the Lord is represented as "he that hath a sharp, two-edged sword," the word of God (Heb. 4:12-13; John 5:22). Pergamos was almost fifty miles north of Smyrna, a city of about 17,000 inhabitants, and the capital of the province. To it were brought many of the early Christians who were compelled to suffer martyrdom. Again we have a church whose works are commended, whose steadfastness is mentioned in that they "held fast to my name, and not denied the faith"—martyrs (vv. 13). However, dangers threatened them for there had been a compromise with the world and with other systems of faith, what we would call today liberality in doctrine and breadth in view in teaching: (1) Some of their number had accepted and practiced the doctrine of Baalim (Jude 11; Num. 31-16). (2) These teachings cast a stumbling block before the children of Israel (v. 14). This was done by persuading the Israelites to join in the idolatrous feasts and revelings of the heathen, and also their impurity of worship.

In the remaining part of the chapter we have some glimpses of the remaining four churches, the good that was to be cherished and the evil that was to be overcome.

Perhaps the most suggestive of all is that of Laodicea, the lukewarm church. Lukewarmness is one of the most deadly evils to overcome, and hence the highest and most glorious of all the promises suggested ends with "I will give him to sit down with me in my throne as I also overcame and sat down with my father in his throne" (Am. R. V.)

Anton Schneider raised sugar beets this year on two tracts of land and averaged over fourteen tons to the acre. The same land has been in sugar beets for four years and this does not look like sugar beets impoverish the soil. However, a more intensive cultivation with a rotation of corn, potatoes, grain and beets seems to appeal to most of the farmers in the beet growing sections.

A good time to get rid of a few rabbits about the orchard is after the first snowfall. Organize a hunt and get a few of them before they injure the fruit trees. They are good to eat at this time.



"The Peace Offering"

"I know what will change mother's mind"

—nothing has solved household problems like Calumet Baking Powder. It has brought happiness into millions of homes—made expert cooks of millions of housewives who never had much bake day "luck."

Its unequalled leavening and raising powers mean big, tempting bakings. The never-varying quality of its wonderful ingredients means the same good results *every* bake day.

Calumet saves you money because it's moderate in price, goes farthest, eliminates failures and waste. It's pure in the can—pure in the baking—and the favorite in millions of homes.

UPPER WISCONSIN

Potato Crop in Rusk County

To the Editor:—The potato crop in Rusk county this year averaged about 50 per cent of the normal crop. The average yields of our large fields run about 125 bushels. On the sand loam soils of the county the Green Mountain was planted almost exclusively, while on the heavy clay and clay loam soils the Rural New Yorker predominated. The Rural New Yorker this year held its type slightly better than the Green Mountain and matured fully ten days later. On old fields where the seed was not treated common scab was very prevalent. Our experiments on new land where seed treated by soaking in formaldehyde solution proved conclusively that the disease can be easily controlled. Tip burn was the most serious factor in cutting down the yield this year. Fields that we sprayed twice or more with Bordeaux mixture suffered much less from tip burn and repaid well for the treatment. The bugs were very destructive on the older fields. Where arsenate of lead and Paris green was added to the Bordeaux mixture the bugs were controlled without loss.

This year spring plowing on clover sod proved to be better than fall plowing on the sand loam soils. On the heavy clay soils fall plowing showed an increase in yield over spring-plowed land.

Pure seed of Green Mountain and Rural New Yorker varieties are being disseminated generally throughout the county and within the next two years we expect Rusk county to be producing first-class seed potatoes in large quantities. G. M. Householder.
Rusk Co. Agl. Agt.

RUSK COUNTY EXHIBIT AT RECENT POTATO SHOW—THIS EXHIBIT WON THIRD PRIZE.

Production in Douglas County.

Assessors' reports in Douglas county show that potatoes was the leading crop in 1915, there having been 86,155 bushels produced. Oats was second with a total of 71,086 bushels.

Besides the above the following crop yields per bushel were given for the past year: Wheat, 5,266; corn, 2,210; barley, 2,986; rye, 5,341; flaxseed, 85; cranberries, 30; apples, 102; strawberries 508; blackberries, 40; currants, 1; clover seed, 203.

There were 965 bushels of sugar beets raised in the county. In all there were 13,806 tons of hay raised during the year 1915.

The land as apportioned for various crop purposes for this year is as follows: Wheat, 631; corn, 1,108; oats, 3,412; barley, 216; rye, 717; flaxseed, 1; potatoes, 1,124; cabbage, 5; land used for apple orchards, 16; strawberries, 15; raspberries, 3; currants, 1. Over half of the land in cultivation in the county is used for the raising of grasses.

There are 4,186 milk cows in the county, according to the report. These have a total value of about $127.471. All other cattle add up to only 1,569 in number and have a total of 21,353. The county has 2,300 horses whose value is estimated at $182,403. There are about the same number of sheep in the county as there are hogs. The former number 454 and the latter 424. The total value of the hogs is more than twice that of the sheep. The sheep value of the county is placed at $1,231 and that of hogs at $2,766.

There were 690,990 pounds of butter made in the county last year. Over a third of this was made on the farm and the rest was manufactured in the four creameries of the county. There were 185,578 pounds of butter made on the farm with an estimated value of $43,556. The creamery made butter value was estimated at $164,479 for a total of 405,402 pounds. Besides the milk that was sold to creameries, farmers sold 843,745 gallons directly.

Quarantine Regulation is Raised.

We are all happy to know that the quarantine regulation, caused by a scare over supposed foot-and-mouth disease at the Kansas City Stockyards, has been raised. The Wisconsin Farmer receiving the following telegram dated December 4th:

Bureau of Animal Industry has raised quarantine regulation here and business is back in normal channel.

Gathered by Representatives of The Wisconsin Farmer.

Swinehart's Short-horn Dispersion.

THE Short-horn herd of R. L. Swinehart, Avoca, Wisconsin, will be dispersed in public sale on Tuesday, December 19th. Short-horn cattle have been bred on this farm for forty-five years and nothing but a pure-bred sire has been used on this farm for sixty years. The herd is headed by Collynie Sultan 387633 by Browndale 334947 and out of Browndale Maid 3d 76024. His sire, Browndale, is by Avondale 245144, whose record as a sire is so well known that it needs no further comment. Browndale was bred by Carpenter & Ross and is out of Maxwelton Mina 2d. The dam of Collynie Sultan is Browndale Maid by Sultan 291836. The cows in the herd of breeding age are in calf to Collynie Sultan, that is of fine roan color and of Young Mary, Duchess of Gloster, White Rose and other well-established lines of breeding. As a whole the animals are good milkers, having been now being in milk and doing very creditably. Send for a catalog of the sale to R. L. Swinehart, Avoca, Wisconsin. J. A. Tormey will be sales manager and G. P. Finnegan and Jess Miller will be the auctioneers. Avoca is fifty miles west of Madison on the Prairie du Chien division of the C. M. & St. P. Railroad. It is very easily reached from all points in Wisconsin, Minnesota, North and South Dakota and Iowa. It will pay western buyers to attend this sale. Connections from the west are easily made by the way of North Mc-Gregor, Iowa. When writing for a catalog kindly mention that you saw their advertisement in The Wisconsin Farmer. See page 20.—Adv.

One Hundred Short-horns.

ROCK COUNTY, WIS., has started something that other counties could well pattern after. A county Short-horn Association was formed some time ago and they now have about fifty members. This fact was a surprise to many, for no one thought there were not many Short-horn breeders in that county. The association is now ready to supply the wants of the prospective Short-horn buyer. About 100 head of cattle are for sale at this time. This includes cows and heifers and bulls of serviceable age. If you want cattle of the most fashionable Scotch breeding, the association can supply your wants. If you want milking Short-horns the best herds in the state are in Rock county and by writing J. E. Kennedy, secretary, Janesville, Wis., you can get all information you desire. If you want one you get the pick of about a head, if you want a carload, we know of no better place to buy. Write the secretary and please mention The Wisconsin Farmer.—Adv.

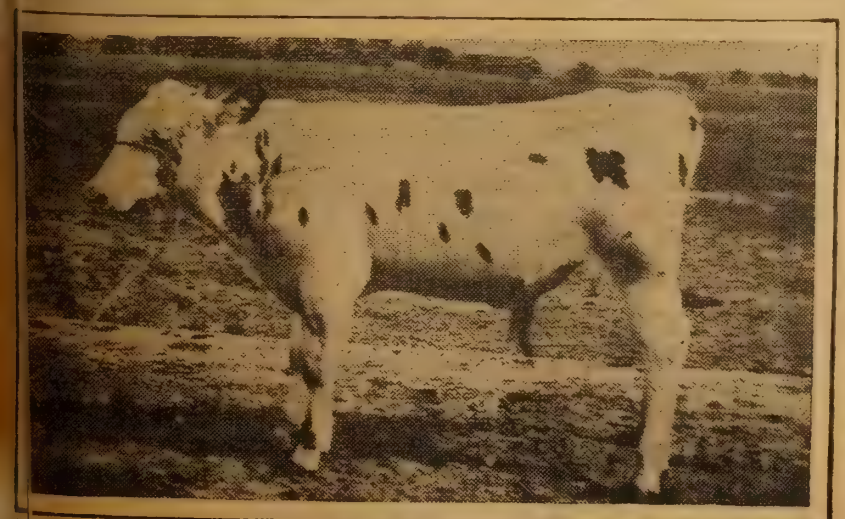
Aberdeen Angus Notes.

FOR the past several months we have been trying to get a "line" on the best herds of beef cattle in the state of Wisconsin and we are glad to say that we have found many good herds that had never been heard of before, outside of their own immediate locality. What is the use of buying and raising good cattle if you don't let the people know about them? There are more good Aberdeen Angus cattle in Grant county than in any other county in the state of Wisconsin and the herd of "doddies" owned by R. A. Austin & Son, of Lancaster, is one of the best three herds that we have seen in the state. Mr. Austin, senior, is one of the older breeders of the state. He recently moved to town and sold a half interest in the herd to his son, Bert E., who is an enthusiastic cattle man and a good caretaker, and is one of the younger generation of cattlemen who are going to put Wisconsin on the map as a beef cattle state. This firm has a herd of some eighty registered Angus cattle representing the most popular families of the breed, namely, Blackbird, Trojan Erica and Erica, Queen Mother and Barbara. The past spring fifty-four cows dropped fifty-four calves and raised fifty-three, which certainly shows that they have a working herd of cows and the calves are on the farm to show for themselves. At the present time eight bulls are being offered for sale. They range in age from around ten months to a year and a half and we have not seen a better lot of young Angus bulls this year. They are thick, sappy fellows, very rugged, good lines, nice heads and well bred. The prices range from $100 to $175 and no matter how many miles you travel to see this herd you will be impressed with their cattle. The advertisement appears in this issue and if you are interested in this breed you will like the bulls they are offering for sale. Write for further information and in doing so kindly say you saw the advertisement in The Wisconsin Farmer. See page 20.—Adv.

THE 23.13-POUND BULL ADVERTISED FOR SALE ON PAGE 22 BY THE PINEHURST DAIRY, SHEBOYGAN FALLS, WIS.

The Villagers.

GOOD Short-horns are always in demand, yet as with all breeds of cattle certain blood lines are favored by discriminating buyers. For the past few years the blood of the great bull, Villager, has been very popular, and as more and more of this sire's sons and daughters come to maturity, the more this line of breeding is appreciated. Perhaps the best bull of this breeding in the state of Wisconsin is Village Denmark 8th, he by the renowned Village Denmark, said to be the best son ever sired by Villager. Village Den-



THE twenty-eight-pound bull sold by Truttschel Bros., Sheboygan Falls, Wisconsin, through their advertisement in The Wisconsin Farmer.

BUY THE BEST AND STILL SAVE $25 TO $50!

Direct From Factory to User

I mean every word of it! You can own the best spreader built and save from $25 to $50 over prices usually paid for spreaders not as good—not as down to date in design, as light in draft, made of as fine materials nor covered by the eleven Galloway spreader patents found exclusively on the Galloway. These features and many others make the Galloway

WORTH $50 MORE THAN ANY OTHER SPREADER

Remember this spreader is **low down**—only 42 in. high to center of box. Easy to load. Lightest draft spreader of its capacity built. Two horses handle Galloway spreaders anywhere. The Galloway **wide-spreading, V-rake, worth $15 extra** on any spreader—costs you **nothing extra** on the **Galloway.** The **invincible, irresistible, patented roller-feed**—an **exclusive** Galloway feature—the secret of its **light draft,** alone **worth $25 extra** on any spreader—exclusive again on the Galloway—costs you **nothing extra. Patented automatic stop, uniform clean out, push board—worth $10 extra** on any spreader—exclusive on the Galloway—costs you nothing extra. These are only a few of the special features you will find on the Gallo way which are protected by Galloway patents. Don't buy a spreader of any make or kind until you have tried a genuine Galloway 1917 Model No. 8, No. 5. or No. 1A at our risk without obligating yourself in any way. Give my spreader

30 DAYS' ACTUAL FIELD TRIAL

and return to me within one year if not perfectly satisfactory. Remember we manufacture in our own factories and sell direct from factory to farm. Remember that no speader is as good as the Galloway that does not have these modern improvements, and remember again that other spreaders can't have them because they are patented Galloway features and can be found on no other spreader.

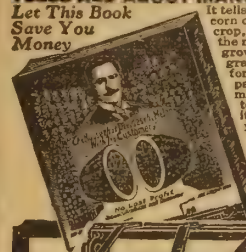
6 EASY SELLING PLANS

pay for this spreader on your own terms. Buy it now, use it all winter and spring, pay for it next fall when it suits you. Complete particulars of these six easy selling plans in my new free book which tells all about Galloway spreaders, engines, separators, tractors and farm implements built in my own chain of factories right here in Waterloo.

GET THIS FREE BOOK

TELLS ALL ABOUT MANURE SPREADERS

Let This Book Save You Money



It tells you how to double your corn crop--increase your wheat crop, and by the judicious use of the manure crop on your farm grow three bushels of small grain where you grew two before. A postal gets it. 250 pages. Tells how to handle manure with least labor. How to increase your corn crop 15 to 25 bushels per acre. How a Galloway spreader will pay for itself in one year by increasing crop profits. How we save you $25 to $50 and still give you a better spreader. How and why a Galloway spreader handles easier with two horses than other spreaders with three and often four. How a run out, unproductive farm was turned into a gold mine crop producer. How to build a manure pit to preserve fertility, etc.

Only 42 in. High at Center of Box

All four wheels under the load. A compact, low down, modern spreader without an equal on the market today.

WM. GALLOWAY.

Note These 1917 Improvements.

Look at the above picture.

A--Shows the new all steel V-shape rake which spreads manure evenly over the beater for wide, even spreading.

B--Shows adjustable automatic tension to make the comb handle load any height above the box.

C--Shows guard which throws all manure over to the beater.

D--Shows the Galloway patent roller feed lever.

E--Shows the stronger than ever beater teeth fastened in all steel beater bar with locknuts

F--Shows chain drive, pulls direct from both rear wheels. Remember--a DOUBLE chain drive.

G--Shows where feed lever operates in feed sprocket which moves the endless apron force feed direct back to the beater.

H--Shows you how strong the feed wheel is.

I--Shows arrows pointing to drive sprockets on both rear wheels.

THE WM. GALLOWAY CO.,
Waterloo, Iowa.
Gentlemen:—
I am well satisfied in every way with spreader, and also with treatment I accorded me by your Company, and must say I saved at least $40.00 by buying from you with interest figured in on the money. Yours very truly,
P. L. Watson, Randolph, Nebraska.

Made and Shipped Direct From Our Great Factories in Waterloo,

WM. GALLOWAY CO.,
Waterloo, Iowa.
Gentlemen:—
I want to thank you for your courtesy and square dealing in my purchase of a manurer No. 8 that you shipped me. It is giving me the best of satisfaction. I have been in active business more than 25 years and I wish to say I never received more kind or fairer treatment than I have from your house. Some people say, keep your money at home. I have as good a spreader as money can buy, and by buying from you I kept $35.43 in my own pocket which is the nearest home I can keep it. Some said that a 65 bushel machine was too large, but I am using mine with a team that weighs 1,800 lbs. with perfect satisfaction. Very truly yours,
Mr. Wm. H. Adams, R. 1, Pound, Wis.

WM. GALLOWAY, PRES., WM. GALLOWAY CO., WATERLOO, IOWA

The AMERICAN MESSENGER

IS THE BEST Illustrated Religious Monthly Published In This Country at the Low Subscription Price of Only 50 Cents a Year.

AMONG its editorial contributors may be mentioned such popular religious writers as Rev. David James Burrell, D. D. LL. D., Pastor of the Marble Collegiate Church of New York City; Rev. Charles Carroll Albertson, D. D., Pastor of the Lafayette Avenue Presbyterian Church of Brooklyn, N. Y.; Rev. J. Wilbur Chapman, D. D., the famous evangelist; Rev. Edgar Whitaker Work, D. D., Pastor of the Fourth Presbyterian Church of New York City, and Rev. George Ernest Merriam.

It is especially valuable to Christian Endeavor and other Young People's Societies. Each issue contains stories of fascinating interest, suitable for home reading and other articles relating to the family life. The American Messenger endeavors to present a comprehensive view of the progress of the Kingdom, both at home and abroad; to tell of the forward movements that are being initiated for the uplift of humanity and the betterment of mankind; to call attention to those phases of Christian work and thought that are of unusual interest; to record the manifold activities of the Christian Church; and to spread abroad the cardinal teachings of Jesus Christ, as revealed in the Gospel which He proclaimed as the message of God.

The paper is interdenominational and admirably suited for every home. All those who subscribe now to the American Messenger for 1917 at fifty cents will receive the paper until January 1, 1918. New subscribers will thus receive the issues for October, November, and December, 1916, free of cost, if they subscribe at once. If you do not know the paper, send for a free sample copy.

Address. **American Tract Society, Dept. 5, Park Ave. and 40th St., New York City, N.Y.**

The Things That You Want the Most

This Book Tells You How To Get Them

IS it not a fact that the things you want the most seem the hardest to get? Have you wished and waited, oh, so long, for some little luxury that you wanted very much, yet hesitated to buy? A tasteful set of Rogers Silver Ware for your table? Or a pretty brooch; a nice book, a pair of gloves; a shopping bag, or any one of a hundred other nice things that you did not wish to spend money for?

You Can Get What You Want Without Cost

Do not hesitate another moment. Send right away for the book that will tell you how to get the things that you want the most without a cent of expense to you. THE PEOPLE'S HOME JOURNAL premium plan will enable any person to obtain innumerable beautiful and useful articles without cost. By this plan can be obtained wearing apparel, household articles, jewelry and the many other things of practical and ornamental utility that you so frequently require for yourself or family.

Thousands Of Beautiful and Useful Presents Given Away

The character of the articles that we are distributing is attractively varied, and in the assortment there is something that will appeal to everyone. Among other things are.

Bound Books	Pillow Shams
Bracelets	Scarfs

Glassware	Novels

and many other nice things for the home and family.

Sent Free Upon Request

This comprehensive 44 page book, illustrating and describing hundreds of attractive and valuable articles, all of which can be obtained without one cent of expense, will be sent free to any reader of this paper upon request. Our premium plan offers an unusual opportunity to those of our friends who are interested in obtaining, without cost, beautiful and useful things for the home and for personal adornment. The book will tell you exactly what to do to obtain the premiums. Send a post card to-day asking for a free copy of this fine illustrated catalogue, showing all the beautiful things we are giving away.

Address all communications to

THE PEOPLE'S HOME JOURNAL

80 Lafayette Street, New York

mark 8th is a rich roan, very thick, has a wonderful spring of rib, is evenly fleshed, exceptionally good at the shoulders, a typical Villager head, and having great scale. With a little fitting we feel safe in saying that he would easily weigh 2,400 pounds. Not only is this bull a good individual himself but he is a prepotent sire. He puts his stamp on every calf he sires. This good bull is owned by J. E. Kennedy, Janesville, Wisconsin, and should be classed among the best in the state, in fact, any state. In our estimation he is one of the three best bulls in the state of Wisconsin. Incidentally, we might mention the fact that Mr. Kennedy has a half dozen outstanding young bulls for sale—well bred and suitable to head herds of pure-bred Short-horns. We like to recommend these bulls, for we feel sure they will give satisfaction. See advertisement on page 21.—Adv.

Production and Individuality Combined.

A HOLSTEIN bull in which is combined high producing blood and outstanding individuality is advertised for sale on page 22 by The Pinehurst Dairy, Sheboygan Falls, Wisconsin. His sire is the twenty-eight-pound bull, King Segis Concordia Hengerveld 96214, that is a son of the thirty-seven-pound bull, King Segis De Kol Korndyke. This makes him a half-brother to Mabel Segis Korndyke, that made 40.32-pounds of butter in seven days and 165.22 pounds in thirty days. King Segis De Kol Korndyke is out of Pontiac Clothilde De Kol and sired by King Segis. He is, therefore, a full brother to the great bull, King Segis Pontiac, whose sons have sold for such phenomenal prices as $35,000, $25,000, $20,000, etc. The dam of King Segis Concordia Hengerveld (sire of the bull for sale) is Sadie Vale Concordia Hengerveld, a daughter of Hengerveld De Kol, claimed by many to be the greatest transmitting sire of the breed. He had 116 A. R. O. daughters, ten above thirty pounds and his daughters' daughters have made wonderful records. The dam of the yearling bull for sale is Pinehurst Grace, that made 23.13 pounds of butter in seven days. She is a daughter of Sir Piebe Johanna Sarcastic, that has nine A. R. O. daughters, four of which have records from twenty to 28.63 pounds butter, all making their records at three years old, which is a remarkable showing. This yearling bull is an outstanding youngster himself, being well grown, of good, straight type and showing constitution and capacity. He is a good individual, not by accident, but because it has been bred into him in every blood line. He also inherits high milk producing blood in every line of his pedigree. There is every reason to believe that he will transmit to his offspring these desirable qualities of good type and high production, as it has been strongly intensified in his blood. His dam will be tested again as soon as she freshens and there is no doubt that she will increase her record very materially as she is capable of a much larger production now than when three years old. Send for an extended pedigree and photograph of this young bull.—Adv.

Menke Buys a Good Boar.

IN A letter received a few days ago from A. Menke & Son, Markeson, Wis., they state: "We have bought a son of Black Jumbo, which we intend to use. We have some gilts for sale which we are going to breed to him. We also have some choice boars on hand at present, which are good, stretchy fellows weighing around 250 pounds sired by Prairie Chief 251053, which will be priced to move quickly. We have three choice bulls ready for service. Also a choice lot of calves sired by Collynie Victor 387634." Our readers are well acquainted with Black Jumbo, and the kind of sons he sires. Menke & Son are to be congratulated on their foresight in purchasing such a boar and the gilts bred to him are worth a lot more money than if they had been bred to a boar of mediocre quality and breeding. The Short-horn bulls sired by Collynie Victor 387634 must be good ones, as he was good enough to win first at several big shows. Write for further description. See advertisement on this page.—Adv.

Kartman Poland Chinas.

IF YOU want Poland Chinas that have stretch and size and with as good breeding as can be found you should write Chris Kartman, Cassville, Wis. Tell him what you want and he will try hard to please you. He will not sell any gilts, for they are reserved for his bred sow sale which will be held February 16th. This is one of the winter sales that you do not want to forget. See page 23.—Adv.

Short-horn Bulls.

IF YOU need a Short-horn bull investigate those being offered for sale by W. F. Wilcox, Milton, Wis. He has reds and roans and they are being priced very reasonable. His advertisement appears in this issue. Write at once and mention this paper. See page 21.—Adv.

Lost Without Wisconsin Farmer.

W. H. EASTERLY, proprietor of Walnut Knoll Farm, near Whitewater, and owner of the Walnut Knoll herd of Poland China hogs writes us that he hasn't had The Wisconsin Farmer for several issues and that he is lost without it. We shall certainly see to it that Mr. Easterly doesn't miss another issue. Mr. Easterly recently bought an extra good boar of the Smiley breeding. He has an advertisement on this page of this issue which will be of interest to hog men. Please be sure to mention The Wisconsin Farmer when you write to him.—Adv.

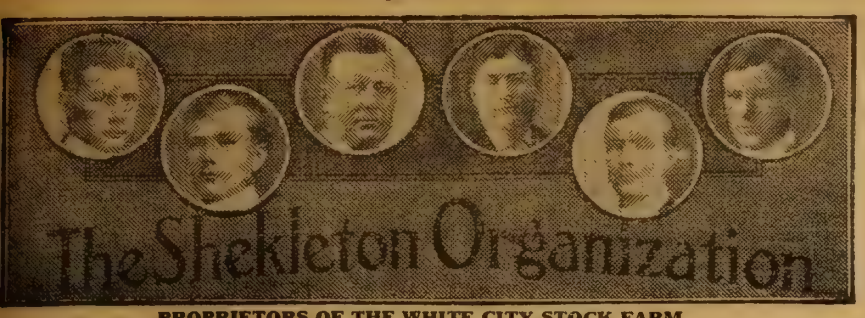
HORSES.



PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

WILLIAMS BROS. — **BANGOR, WISCONSIN**

USE A SHORT-HORN BULL

ARE you raising beef? A Short-horn bull will give you more scale and bone and more pounds of flesh for a given amount of feed than any other breed. Are you a dairyman? A Short-horn bull with milking ancestry will maintain your milk supply and will sire calves that will be quickly salable at a much higher price than you can hope for from a dairy bred bull. Are you a farmer? The Short-horn is the ideal for your purpose, because it is adapted to all conditions, of quiet temperament, takes on flesh readily, and yields a liberal flow of milk. The Short-horn always works improvement.

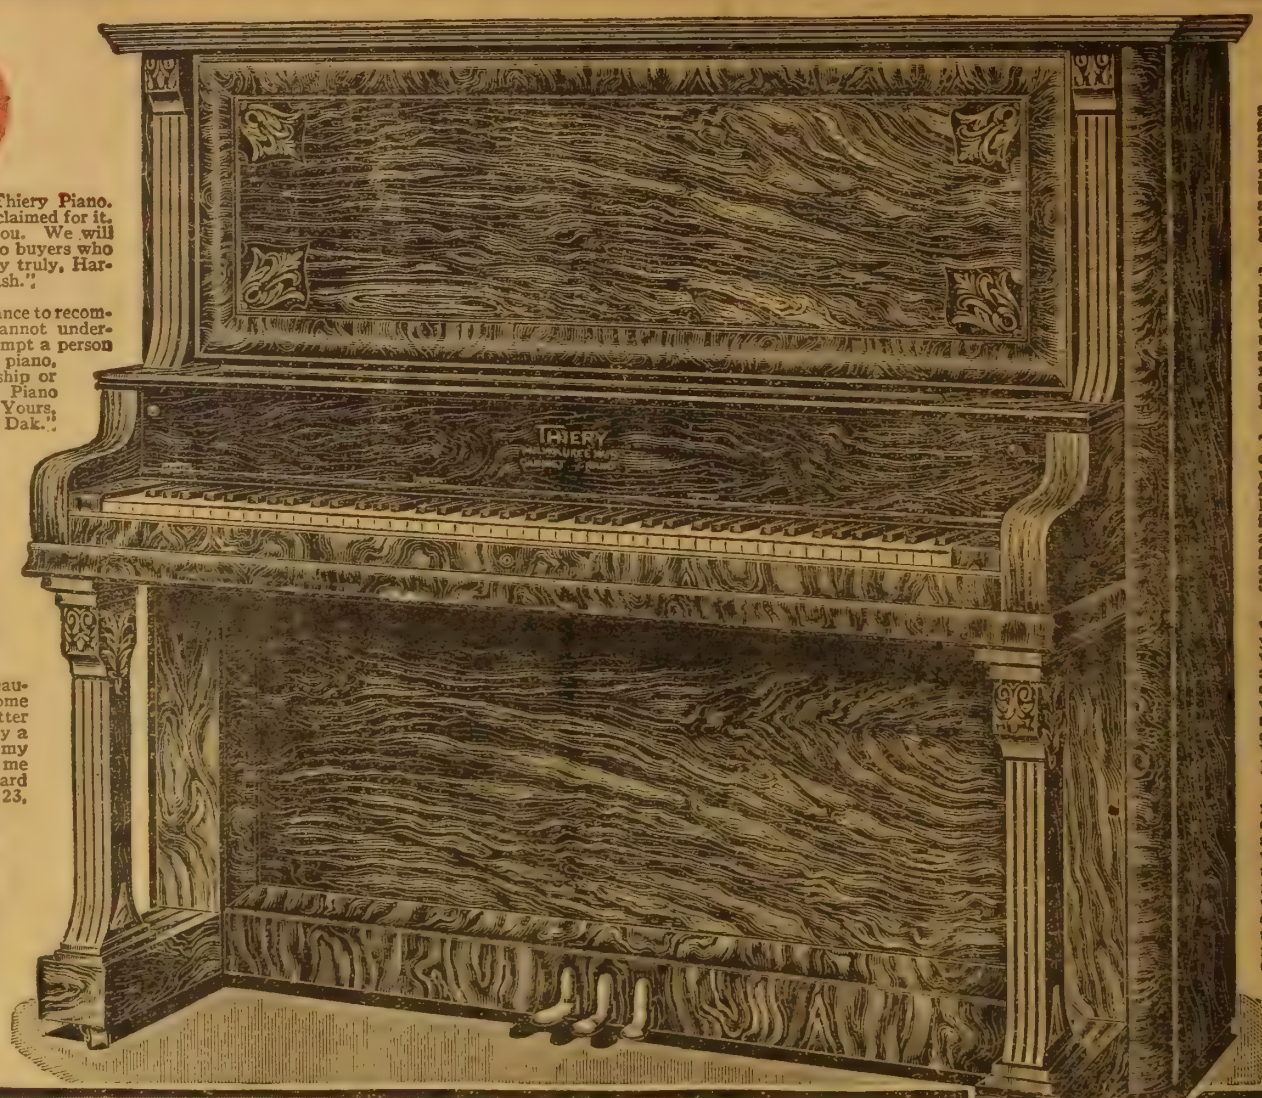
"We are proud of our Thiery Piano. It is all and more than you claimed for it. Glad that we dealt with you. We will answer all letters from piano buyers who enclose stamp. Yours very truly, Harvey Priddy, Wenatchee, Wash."

"I have never missed a chance to recommend Thiery Pianos. I cannot understand the idea that will prompt a person to go and pay $350.00 for a piano, no better in tone, workmanship or appearance than a Thiery Piano costing less than $250.00. Yours, Mrs. N.H.Hanson, Lead, So. Dak."

"You will never get the Thiery Piano back, because we decided to keep it just as soon as we had it unboxed and in our parlor. Certainly am delighted. The music teacher was here yesterday and said that retailers here would want $400.00 for a piano that could compare with yours. Mrs. D. M. Stroup, Smith Center, Kan."

"I have now had your beautiful Thiery Piano in my home for some time and like it better every day. If I tried to buy a piano as good as this one in my home town, it would cost me $100.00 more money. Edward Heil, R. F. D. 1, Box 23, Marion, Ind."

"Every one that sees our beautiful Thiery Piano, thinks it cost us $100.00 more than we really paid you for it. They are surprised to know the real price. And, as is generally the case with good pianos, the tone improves with use. Yours, Laura J. Taylor, R. F. D. 10, Knobnoster, Mo."



Read What Buyers Say

"Anybody that wants to buy a piano, should think twice before refusing to accept your free trial invitation. There are lots of pianos in our town, but none as good as this. Everybody that has seen our piano, says it is the best in this community. Chris. Egstad, Alberta, Minn."

"Although we have had our Thiery Piano about two and a half years, we have only found it necessary to have it tuned twice and the piano tuner told us it was a pleasure to tune such a perfectly constructed instrument. We are glad we dealt direct with you. A. Luckow, R. F. D. 2, Breda, Iowa."

"We know just how the Thiery Piano stands and so do our neighbors, because although we have had our Thiery Piano for five years now, we have only had it tuned once since we got it. It certainly holds its tone and we wouldn't exchange it for any piano in our community at anywhere near the price. Sam Parker, Sandoval, Ill."

"We are more than pleased with the piano purchased from you. It proves to be exactly what you said it would. The action is perfect and the tone can't be improved upon. I am well satisfied that we have saved over $100.00 by dealing direct with you. Yours truly, Walter Osborn, Eagle Bend, Minn."

"I am mailing you today money order for the balance due on the piano and will still say, as I have said before, that we have the best looking and the finest toned piano in our neighborhood. Any time you want to use me for reference, do so and I will surely do justice to you and to Thiery instruments. Mr. Chas. Kuntz, Celina, Ohio."

The Thiery Piano shown here, the Empire Model Style "FF," is just one of the many original styles shown in the Style Book.

The New 1917 Thiery Style Book is now ready and any one of the Beautiful Thiery Pianos or Player Pianos shown in this New Art Catalog in large 3 Color engravings is yours All Freight Prepaid

Free On Trial For One Month

Without any advance money—without the slightest obligation to buy—without any freight expense whatsoever—with one month's free trial and test in your home—with the privilege to ship back at my expense—with my positive assurance that you will figure yourself $75.00 to $150.00 ahead by direct dealing—with two to three years' time to complete payment if you do not wish to pay cash—*with all these things in your favor*, you are invited to choose from the beautiful new Thiery Piano Style Book any Thiery Piano or Player Piano that you wish.

Every possible advantage that the intending buyer of a piano could wish for is given to you without asking. For a dozen years, piano buyers all over the United States have been solving the piano buying question and *saving money* at the same time by merely sending for Thiery Instruments on trial. *Scores of the readers of this paper are among them* and one and all of them are glad to advise their friends and neighbors to send for Thiery Instruments on trial whenever the subject of piano buying comes up.

Direct dealing means a handsome saving of money—it means no fancy prices or fancy profits for you to pay. It costs you nothing to find out and know how fine Thiery Pianos are. Today, one fourth of all the Thiery Pianos sold are orders that come to me *through customers that have had Thiery Pianos for years* and are recommending them to their neighbors.

Send today for the 1917 Art Style Book, illustrating in colors all the beautiful new styles of Thiery Instruments with trial order blanks, letters of endorsement from buyers in every state in the Union and special letter, giving complete information regarding cash and credit prices. This book in your hands will solve to your very great satisfaction the piano buying problem.

Prove the Quality Before You Pay a Penny!

The safe way to choose a piano for your home is to *prove its quality* by testing it in your parlor *before* you pay a cent towards its purchase price. The *proper* test is a *home* test. Therefore you are invited to play on and enjoy any Thiery Piano in your home one month at my expense, and make your comparison with any other piano you wish. After doing this merely return *at my expense* if you are not more than pleased.

All Thiery Instruments Fully Warranted

Whenever you see a musical instrument with the name THIERY upon it, you can make up your mind then and there that it is a *QUALITY INSTRUMENT*, and the owner is fully satisfied. For all Thiery Instruments are guaranteed against any defect in material or workmanship. You cannot buy a piano or player piano at any price that's stronger guaranteed than a Thiery.

Complete Course of Music Lessons Given Free

By special arrangement with the Apollo Institute of Music, at Milwaukee, Wisconsin, the purchaser of a Thiery Piano receives a Scholarship free of charge entitling said purchaser to a complete and highly instructive course of music lessons by mail.

Duet Bench and Expensive Scarf

included with all Thiery Pianos except the style "A", free of cost. With Thiery Player Pianos a fine selection of music rolls are given free also.

NOTICE:

Agents and dealers in musical instruments are requested not to write for catalogs and prices for the reason that Thiery Instruments are sold only direct to the home, and not to agents and dealers.

THIERY ORGANS

Fifty thousand beautiful Thiery Organs sold direct to homes in the past ten years. Shipped on thirty days' free trial and test. $2.50 per month or $5.00 every two months pays for one. Exchangeable at any time within five years as part payment on any Thiery Piano or Player Piano. If you want to save $20.00 or $50.00 when you buy your organ, be sure to write to me for the Thiery Organ Book, with trial order blanks and price list.

Three Years Time To Pay If You Want Credit

Any Thiery Piano or Player Piano on a two or three year time payment plan if you don't want to pay cash. Arrange to pay monthly, quarterly, semi-annually or a dozen different ways. *You set the payment dates that will be most convenient* for you, and I will accept them if possible. Hundreds of homes all over the United States and in foreign countries are buying Thiery Pianos on this confidential charge account plan, and enjoying their instruments while they are paying for them. You can easily do likewise, for any honest and reliable reader of this paper may have long time credit by merely asking for it, and without any publicity or red tape whatsoever. The special letter sent with the Style Book goes into detail concerning this charge account plan.

THIERYOLA Phonographs

Thieryola Phonographs are the real "MUSIC-MAKERS" of all phonographs. Like Thiery Pianos and Organs they are sold *only direct to the home*. They play *all makes* of disc records, and are beautiful machines in genuine mahogany, burl walnut and oak cabinet. Shipped on ten days' trial without any advance money, and returnable at my expense. A little down as first payment and the balance monthly if you don't want to pay cash. The prices range from $10.00, $15.00 and up. Double disc records are included with each machine. The new Thieryola Phonograph Book shows all Thieryola Phonographs in colors, and a copy will be gladly mailed to any interested person.

THIERYOLA PHONOGRAPHS Play all the different makes of Disc Records.

THE WISCONSIN FARMER

VOL. XLV. NO. 50. THURSDAY, DECEMBER 14, 1916. WHOLE NO. 1820

The 1916 International Exposition.

WITH cattle plague swept from the land, thereby removing a menace that threatened a great industry for an eighteen months' period, the 1916 International Exposition proved, last week, to be literally a "march of triumph," an unmatched achievement in the presentation of improved farm animals. Its record was unique not only in the large number of entries and in the quality of same, but in the proportion of the number of animals entered that were to be found in the pens, stalls and yards. Factors over which stockmen have no control may be expected to shrink an entry list from 3 to 5 per cent, but not so this year, as it was less than 1 per cent by official count. This great show has rooted itself deeply in the esteem of men, whose leadership counts for something worth while in progressive agriculture, the men who give their best endeavors to the improvement of farm animals. In assigning credit for this year's event, much must be given to the Internationals of years gone by, because here's where men's ideals have been heightened and their pride of accomplishment stimulated. Here's where the type has been fixed toward which our breeders aimed, and proudly must the record be viewed when we contemplate the fact that not in a single important class or breed have we followed after false gods. True as the needle to the pole, the officials of this great show have held its purpose in the creation of animal form of greater utility.

BELLOWS' GRAND CHAMPION SHORT-HORN BULL, VILLAGE SUPREME.

HAZLETT'S GRAND CHAMPION HEREFORD BULL, BOCALDO 6TH.

The magnitude of this exposition can scarcely be comprehended, excepting by those who were present to inspect it. Outside of the carload lots there were 1,670 cattle, 1,110 horses, 916 swine and 846 sheep. These were the numbers entered in advance of the show, and a stall and pen count during the show, as before stated, indicated that less than 1 per cent of the entries were missing when the gates opened on Monday morning. In the main these entries were pure breds, because there were only eighty-seven grade and cross-bred cattle, eighty-four grade hogs, 114 grade sheep and eighty-two grade drafters. Taking out this small number of grades, it will be seen at a glance that the number of pure-bred entries in cattle, sheep and horses, especially, far exceeded the record of any of our state fairs. But numbers alone did not tell the tale, nor was this the main feature of the exposition, but, on the other hand, it was the quality of the live stock on display that brought forth the most favorable kind of comment from visitors. The state fair circuits had eliminated everything but the best, and breeders from the East and from the West as well as from the North and from the South were in Chicago to contend for the highest honors obtainable in any American show ring. In some of the classes the American breeders met contenders from the Canadian provinces, thus adding spice to the competition and attaching to the winners in such classes a greater glory than if but one country contended. The large entry list deserves all the more favorable mention because of the foot-and-mouth disease scare that occurred the week before the show, but which fortunately turned out to be a false alarm, though serious enough for a time to bring three states under quarantine regulations. This, in itself, was significant, because it shows that breeders of pure-bred live stock are determined to bring the great cause which they represent to the front, and no ordinary circumstance could thwart the plans of those who are prepared to participate in this event.

If breeders did their part well in furnishing a large entry list of well-fitted animals, their record was but matched by the attendance during every day of the show. Two years had lapsed since the holding of the last International Exposition, and stockmen were apparently hungering for another event of this kind. They jammed the aisles, the pens and the amphitheater from the time the doors were first opened until they were closed at the end of the week, with the result that the record eclipsed by far all former events. They came by the thousands and tens of thousands, and prepared as the Windy City always is to absorb an immense crowd, the hotels last week were filled to overflowing. Fortunately, this great show is spread over a wide area, and only this fact prevented uncomfortable and possible undesirable crowding and jamming. General Manager B. H. Heide believes in a policy of preparedness, and every lieutenant was in his place to aid the visitor in getting every possible advantage from the great show. On every hand could be heard the most favorable kind of comment upon the management, and special credit must be given to Mr. Heide, who was immediately in charge, and to the board of directors for the important part played by them in putting on this great show. In all of its branches this exposition is educational primarily and fundamentally, but no part of the program, carried out last week, received such painstaking attention as that given to the domestic science lectures and demonstrations which were carried on during the afternoon of each day. The officers of the International were fortunate in securing the services of experts from the Iowa Agricultural College, and visitors to these meetings proved to be especially interested in the ways and means of meeting the high cost of living without impairing health or losing any of the comforts of daily life. It was shown by these experts that meat could be largely used without involving the family in exorbitant expenses, and to this end ways and means of preparing the cheaper cuts were discussed and illustrated. Men and women alike stared in wonderment when told that round-steaks as well as chucks were even richer in nutrients than the finest sirloins and porterhouse cuts, and their wonderment still further increased when it was shown before their very eyes that these cheaper meats could, by the alchemy of sensible cooking, be made just as tender and just as palatable as the high-priced

parts. The management of the International is to be most favorably commended in carrying out the extensive domestic science program that was enjoyed so much by visitors last week, and we venture to say that thousands in attendance went away with greater belief in the value of meat as a diet and with increased knowledge in regard to its preparation.

A most instructive exhibit had been installed by the University of Illinois and at any time during the week scores of visitors could be found around this exhibit, pencil and paper in hand, jotting down facts and figures relating to certain farm practices. Special interest was being taken in the division of the miniature 160-acre farm which was divided on a scientific basis into sixty-four acres of corn, sixteen acres of oats, sixteen acres of wheat, eighteen acres of alfalfa and the balance of the land devoted to blue grass, to rye, clover, rape and the farmstead. Unquestionably thousands of visitors made a plat of this little farm during the week and no man can say to what extent this exhibit might influence the introduction of more sensible crop rotation in the future. Of special interest in this exhibit was the yields of grain from fields of similar area treated in unlike fashion. Where corn was grown continuously for sixteen years, for example, the average yield was thirty-one bushels per acre. Where it was alternated with oats and clover, but with no fertilizer the yield was sixty bushels per acre, whereas the same kind of land rotated with corn, oats, clover and which in addition received manure, lime and phosphate, produced an average yield of ninety bushels per acre when put in corn. Every conceivable kind of destructive insect was on display in this exhibit and instruction given in methods of destroying crop, garden and orchard enemies. The possibilities of changing the character of a given crop was well illustrated by samples of corn on display. It was shown, for example, that the oil in a series of years could be increased almost 2 per cent and, furthermore, the stalks, by breeding for low or high ears, can be altered in a few years so that not the least resemblance remains of the original parent stalk. Even the habit of twin ear production is one than can be well nigh fixed, as a type has been produced at the University of Illinois that will show two ears to the stalk in practically 70 per cent of the entire crop. The inspection of this exhibit made an agreeable diversion for visitors after studying the various classes of live stock, and well it might because the crops here on display and the economic production of same constitute the fundamentals upon which the live stock industry is based.

A most significant event for stockmen was the placing of the grand champion ribbon in the individual classes on a thirteen-month-old youngster and, in addition, the capturing of the grand championship prize in the carload lots by yearlings. The winning calf was found by Senor Carlos M. Duggan, the South American judge, in the grade and cross-bred classes, and the little Hereford-Short-horn was good enough to sweep all competition aside and finally land on top. His tidy weight of 1,130 pounds meant that he fitted into a class that will generally command a premium in the market. Steaks and roasts from this type of an animal are not wasty, as are those from a bigger carcass, and, furthermore, an animal of this weight and brought to that point at thirteen months means that the gains have been made more cheaply than they could possibly be put on heavier cattle. If there are those who were disappointed because a more mature animal did not capture the purple, a little reconsideration would be in order because certainly the arguments are in favor of popularizing the young steer. Senor Duggan either knowingly or unknowingly emphasized a principle in animal production when he selected this calf that American stockmen can well afford to consider. Two stockyard judges, Messrs. Cross and Tamblyn, reached the same conclusion as the foreign judge when they passed on the carload lots save only that they found the champions among the yearlings instead of the calves. They passed by the heavier cattle in their search for quality and for dressing ability, so that stockmen of America may safely conclude that the day of the early maturing type has arrived. It was not so much that the two year olds were weak, because as a matter of fact they were strong classes, and the crown was placed in the individual as well as the carload classes unquestionably where it properly belonged.

A novel feature characterized the opening of the International this year, a feature which gave to farm youths the center of the stage during the opening hour. It involved the showing of thirty baby beeves. In the main it was an exhibit of the juvenile steer feeders of Iowa, the boys and the girls who took part in the contest carried on by the Iowa Beef Producers' Association. Something more than merely picking the best individual animal was required of the judge in this class, as 50 per cent counted for quality and finish, 25 per cent for economy of gain and 25 per cent for rate of gain. The blue was landed by Leon Mitchell, of Marcus, Iowa, on an Angus; second Duran H. Summers, Melbourne, Iowa, on a Short-horn; third G. Alden Wright, Mt. Pleasant, Iowa; fourth Glenn A. Windom, Nodaway, Iowa, and fifth Henry Kruse, Council Bluffs, Iowa. The exhibitor in each case, whether boy or girl, had fed out the animal shown for a period of twelve months beginning November 1, 1915, and ending one month ago. Most creditable gains had been made during the year and in some instances these ran as high as 850 and even 900 pounds, the cost of gains ranging all the way from 6 to 10 cents per pound. No feature of the entire International brought forth more favorable comment than this, the first class of the show. There were over 200 entries in this Iowa contest and only the tops were shown last week, but this is unquestionably a movement that will contribute in a practical way to the development of animal industry on the farms of the corn belt in the future. This work was encouraged by the Union Stockyards in providing for a regular class for the best steer or heifer under thirty months old and there were six entries in this class, the blue being captured by a twelve-month roan Short-horn calf fed out by Ralph Peak, of Winchester, Ill. His brother, George Peak, won second and a Michigan boy, Melville Taylor, captured third. Mark Peak won fourth on a Short-horn and John H. Turner, DeWitt, Iowa, won fifth on an Angus.

The student judging contest which took place on the first day of the show brought into line three institutions that had never before participated in this event, namely, Massachusetts, Virginia and Arkansas. Their entry into the fray brought the number of teams up to fifteen while the largest number that ever participated before was thirteen. No representation was present from MacDonald College of Quebec, Canada, nor from the province of Manitoba, most of the students from these institutions being now in the trenches. Dean J. H. Shepperd, of North Dakota, has had this contest in charge for many years and its success is in a large measure due to his splendid management. Several classes of horses, cattle, sheep and swine were passed on by expert judges and afterwards rated by the students. When the smoke of battle had cleared it was found that the Indiana boys were the victors with 3,970 points. They were pushed to the limit by the boys from the Iowa Agricultural College, who landed second with 3,950 points. Then came Ohio with 3,877, followed by Texas with 3,814; Kansas, 3,749; Missouri, 3,676; Kentucky, 3,525; Pennsylvania, 3,492; Nebraska, 3,468; Minnesota, 3,386; Virginia, 3,336; Arkansas, 3,219; Ontario, 3204; South Dakota 3,149; Massachusetts, 3,136.

Some idea of the importance that is being attached to the educational value of the International Exposition by stockmen was indicated by the presence of a delegation of over 600 farmers from North Dakota. Special trains had been chartered and members of the party were mainly made up of farmers and stockmen, although they were accompanied by a few bankers, merchants and newspaper men. Those in charge of this delegation made the claim that it was a movement originated by well-to-do farmers who realized the importance and necessity of developing the live stock industry. North Dakota has made a splendid record in wheat production but these men appreciate the fact that they are depleting the land and if live stock farming is to be engaged in the foundation stock must be of the very best, asserted one of the most prominent men in this delegation. Coming in a body in this way an example has been set that might well be emulated by farmers of the northwestern and even the eastern and southern states. The International has become a fixed institution and its standards are as high as found in any coun-

The Wisconsin Farmer

THURSDAY, DECEMBER 14, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

THE INTERNATIONAL.

I WANT to congratulate the stockmen of the country and the officials of the International on the magnificent exhibit which was made in Chicago last week. I have been attending fairs and expositions, and following the progress of farming and the live stock industry in this country, for many years, and I am conservative and accurate when I say that no such exhibit of high-grade live stock was ever made in America before. I am equally glad to be able to report that never was the attendance or the interest in a fair or exposition so great.

My readers are well aware that we have not had an International for the past two years. There were moments, within the last month, when some feared we would not be able to hold the show this year. But at the last minute the last vestige of doubt disappeared and the stock came to Chicago by the carload, never in such quantities and never of such high grade before. When I call your attention to the fact that there were almost 5,000 head of stock exhibited at the International last week, in addition to the carload lots, and that more than 90 per cent of this was pure-bred stock, you will get a slight idea of the magnitude and the excellence of the exposition. When I go on to say that the entries actually in place were 99 per cent of those made in advance of the printing of the catalog, a record which I do not believe has ever been equaled in this country, you will get still another idea. And when I go on to tell you that there were between 60,000 and 70,000 people on the grounds one day alone, you can hardly fail to comprehend the vastness of the show which was held in Chicago last week.

I cannot begin to tell you how proud I am to be able to narrate these facts. We are at the high tide of farming prosperity in America just at the present; never were our fields or herds more productive, never were prices better. But we must not be satisfied with this. We must build for the future. A few weeks after the war broke out (in August, 1914,) I printed an editorial on this page, calling upon the stockmen of the country to meet the situation fairly and squarely, to begin building up and breeding up their herds, so that America would take advantage of the big opportunity which was hers, and be enabled to supplant the European countries as the premier stock-breeding nation of the world. I pointed out the advantages of pursuing such a policy. I urged stockmen, in the strongest language at my command, to cull out the runts in their herds, to get only the best blood and to breed constantly toward perfection.

Last week's International convinced me that what I urged two years ago has been done by thousands of stockmen all over this great country of ours. We are indeed attaining that perfection which will make us the greatest live stock nation in the history of the world. I congratulate the stockmen of America upon their success in measuring up to a great opportunity in such a big way. The future is bright with promise. Let us join hands to retain our leadership, our prosperity and our just pride in the advancement of the live stock industry of the country.

FARM-LOAN BLANKS READY.

IT IS no exaggeration to say that I have received 1,000 letters of inquiry, within the last few months, in regard to the workings of the new federal farm-loan law. The gist of the more recent of these letters is this: "How can I go about it to join or to form a local association, through which I may borrow from the government?" I am glad to be able to say that I now have definite, official information on this subject. A member of the Farm Loan Board writes to tell me that they have the blank form of the articles of association printed and ready for distribution. If farmers who are interested will write to the Federal Farm Loan Board, Treasury Department, Washington, D. C., these blank forms will be sent to them without cost. The member of the board who sends me this information adds this advice to prospective farmer-borrowers:

When these articles reach you, call a meeting of the prospective members of your association, adopt these articles, and have each member sign them and acknowledge them. Fill in the blank space at the top with the name your association adopts. Then, at your first meeting, elect a board of five or more directors and have the directors meet and elect a president, a vice president, a secretary-treasurer, and a loan committee of three members. The loan committee may begin at once to value the lands of the members and prepare its written report of these valuations, which must be unanimous. Do not send the signed articles of association to Washington, but hold them until the federal land bank of your district is located. Then, write to the bank asking for forms which include an application for a charter. When these come, fill them out and send them, together with the articles of association and the report of the loan committee, to your federal land bank.

The next question that naturally arises is this: "When will these federal land banks be open for business, so that the money we need will be actually forthcoming?" I am now able to announce, also officially, that the names of the twelve cities where these banks are to be located will undoubtedly be made public by Christmas. The Farm Loan Board returned to Washington a week or ten days ago, after having traveled 20,000 miles, held fifty meetings and taken testimony from hundreds of farmers and as many city men. A member of the board advises me that they have received letters of inquiry from fully 200,000 farmers, which shows how widespread is the interest in the new law and its possibilities in the way of reduced interest, longer time in which to repay the loans and the installment method of repayment. The board has issued this official statement in regard to its hearings:

The testimony showed that farmers have been required to pay exorbitant rates of interest and unnecessary commissions and have been laboring under the handicap of too short loans. The hearings also disclosed the fact that since the farm loan act has been passed interest rates in most parts of the country have been reduced to a marked degree to meet the new co-operative competition.

Members of the board expressed great pleasure over the great degree of co-operation that has been given them by chambers of commerce, by state agricultural colleges, by newspapers and farm papers, by county agents, and by bankers. Particular pleasure was expressed over the fact that bankers in most parts of the country did not resent the creation of this governmental agency to finance farmers, but rather took the broad view that the farm loan act would so stimulate prosperity in the rural districts that the cities would reflect this prosperity and that eventually its benefits would be felt in every line of commercial activity.

The board also expressed pleasure over the fact that farmers in most cases voiced the belief that a loan limited to 50 per cent of the security would serve their necessities, and that this limitation would contribute to make the bonds so secure that lower rates of interest would result.

I shall continue, from time to time, to give further information and advice on the subject, and I renew my invitation to my readers to write me for particulars or my opinion on various phases of the law. It is the province and purpose of this page of mine to be useful to the individual reader in a sort of advisory capacity. I would not be doing my full duty as a publisher if I did not welcome questions, invite letters and give advice and information to the best of my ability. So never hesitate to write me; I shall do the very best I can in reply.

FARM DOORS AND FARM HEARTS WIDE OPEN.

TWO things have impressed me greatly in the several hundred letters which have come to me within the last week in regard to the young Chicago automobile mechanic who wishes to abandon the "great white way" and get back to the country lanes. First, the large number of farmers here in the grain belt today who need the services of a mechanic fully as much as a man to plow, feed the stock and husk corn. Second, the large number of hired men who graduate into farm tenants and eventually into landowners.

I am not going to print any extended extracts from any of the letters which have reached me, for most of them were written in confidence and I am not at liberty to publish them. Nor could I do so, even if I had permission, for they would fill page after page of this paper, to the exclusion of all our many interesting departments. I am going to print a few sentences, taken at random, from some of the letters, to show to what an extent our farmers are adopting the tractor, the gasoline engine and the automobile as aids to farming and thereby find themselves in need of the services of a mechanic, such as this Chicago man represents himself to be.

Here, to begin with, is a letter from a farmer living near Necedah, Wisconsin:

We have three gasoline engines and a full barn equipment of farm machinery, even to a threshing machine and silo filler, wood saw and so on. I expect to buy an automobile soon. We also have a milking machine.

Surely farming has changed from man labor to machine labor when such a condition exists, not alone on isolated farms, but generally throughout the grain belt, as these letters indicate. Here, to continue, is an extract from a letter from a prosperous stock farmer of Crystal Lake, Illinois:

We have a farm of 600 acres; have our own electric lights and water-under-pressure system; also four gasoline engines, a tractor and an automobile to keep in repair, which makes just such a man highly desirable.

A change, indeed, from the days of "the man with the hoe"; nowadays "the man on the tractor." But let us proceed. Here is a part of the letter written by a farmer living near Cylinder, Iowa:

We have a 12-25 tractor, an automobile and a three-horse-power gasoline engine to do the washing and odd jobs. We take a couple of daily papers, three farm papers (of which yours is by all odds the best) and have about 170 volumes of the best fiction to read at spare moments.

Here is a portion of the letter written by a man living near Whiting, Iowa, who has 500 acres under cultivation and who says:

All of our plowing is done with a 15-30 tractor, as well as our threshing and silo filling.

The missionary work done by the tractor demonstrations of last year and this year is bearing good fruit, for it is really remarkable the number of letters from farmers who are using tractors and who mention this fact as one of the reasons why the Chicago mechanic should go to their place to live and to work.

Now, let me quote a few sentences from different letters showing how our farm hands of today are the farm tenants of tomorrow and the landowners of day after tomorrow. I will not identify the writers, but what they write is characteristic of the policy of advancement in effect in the entire grain belt today:

"We had one young man stay with us for five years, when he went west to enter in the sheep business with his uncle. Another young man, from Ohio, a German, stayed with us for three years, then married and now owns eighty acres of well-improved land two miles from us and is one of the best farmers in the county. Three brothers from Putnam county, Missouri, worked for us something near five years."

"I have a farm of 320 acres, 200 acres under cultivation. I have all up-to-date farming machinery, such as tractor and automobile. I am getting along in years and want someone I can depend on, with a view to renting to him in the future."

"The young man that is now with us has been with us the past four years, winter and summer, but now has rented a place and is going to be married."

"I have a man with me at the present time that has been with me for the last ten years, and his wages are one-fourth of all the grain raised. Now he is going to have a place of his own."

Over and over again, the same story is told: There is a chance for the hired hand to save money and eventually to rent a place, then to own one for himself. The door of opportunity is not shut on the farm today, even with land as high priced as it is. A few years as a hired man, a few years as a tenant, then land ownership and prosperity; it is a cycle of possibilities as yet hardly realized.

In conclusion, I am going to print one letter almost in full, for it shows how the door of opportunity is opening to this young man of the city, if he proves himself worthy. The letter comes to me from a Wisconsin subscriber. It is addressed to the Chicago man whose pitiful plea to get back to the farm inspired it, and runs as follows:

I am an elderly man and retired farmer, who could find no enjoyment in city surroundings, I am living in this country village near by where I have a fine home. I have reserved part of the farm where I have spent my time the past ten years and have it planted to an orchard—all my own work until two years ago it began to bear, and then help was necessary to gather the crop, and meanwhile I am getting more feeble.

Now, I wish to get some one to be a companion to me—go to and from the orchard with an automobile and with a truck to do the necessary work. I also shall have a tractor next year to do cultivating and am building a house for a laborer and family; also a fruit house to take first-class care of the products. I am in such circumstances that I do not care about what the proceeds of the orchard amount to, but the last two years it has been profitable, and I intend to return in improvements all and more than what it produces. The orchard now contains fifty acres, but will be enlarged nearly as many more.

Here is a chance for the young farm-mechanic to be more than a hired hand, more than a tenant. He is wanted as a companion, amid ideal surroundings. I fancy he will answer this letter among the very first, for if he is indeed worthy (as I hope he is and believe, from his letters to me) he will be glad to cheer and assist the declining years of this aged man and make the fruit venture the unqualified success which it deserves to be.

I shall have more to say of this young man and his plans in the near future; this must suffice for this time.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-In-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Ave. Des Moines, Ia. | 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscription or advertising may be addressed.

MEMBER AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscriptions, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription prices in Canada, $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing give the same name and initials as you gave before or state both the old and new names, and explain why you make the change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address WISCONSIN FARMER, MADISON, WISCONSIN

Long Evenings Made Short.

THERE is an old proverb which runs like this: "He that can read and meditate will not find his evenings long or life tedious." Surely this more aptly and truthfully applies to the farmer, in winter, than to any other man, at any other time.

The season is upon us when those of us who read and meditate find the time passing most pleasantly and profitably. To this end, those of us who have the task of making The Wisconsin Farmer interesting, practical, instructive and entertaining to every member of the farm household, are devoting ourselves with redoubled vigor to our work. It is our earnest effort to make The Wisconsin Farmer of still more value to all its 90,000 subscribers in the next year than ever before in its history. Our plans are already laid for such a winter course of good reading as no other farm weekly in the grain belt ever gave to its readers. We cannot announce all these plans yet, but they will disclose themselves week by week.

Last week our editor-in-chief, Mr. James Atkinson, our staff photographer, Mr. Alfred Morris, and a dozen of our assistant editors, field men and department editors were in Chicago attending the International Live Stock Show, a full and detailed report of which will be found elsewhere in this paper this week. We are convinced that this is the most accurate, readable, authentic and interesting report of the International which any farm paper will publish, and we call our readers' attention to it with just pride.

While we ars thus engaged in giving readers of The Wisconsin Farmer the very best possible reading matter, timely and entertaining to all, it is incumbent upon our readers that they co-operate with us by renewing their subscriptions promptly, so as not to lose a single issue of The Wisconsin Farmer and to assure us that we can count on their support in the coming year as we go ahead with our big plans. But that is not all; there may be friends and neighbors who do not yet realize or know, by personal experience, that The Wisconsin Farmer is the best farm paper in Wisconsin, Minnesota and North Dakota. Why not do them a favor by loaning them your copy, telling them how good The Wisconsin Farmer is all the year round, and securing from them an order for the paper to be sent to their address? We want to urge upon every one of our subscribers that they become a committee to get new subscriptions, so that our reading circle may enlarge and still more of us may have the opportunity to read and meditate, so that none will "find his evenings long, or life tedious." We will do our share; will you do yours?

Wisconsin Stock Buying Tour.

THE State Bank of Exeland has taken a forward step in the interest of dairying in Sawyer county. The officials of this bank recently took twenty-eight farmers from their county to Waupaca county. The purpose of the tour was to secure a carload of better breeding dairy stock. Mr. F. W. Kasl, of the State of Exeland, and C. P. West, county agricultural representative, accompanied the party. D. S. Bullock, representing the Wisconsin Live Stock Breeders' Association, and T. A. Hoverstad, agricultural commission of the Sioux Line Railway, also made the tour. Mr. Bullock gave a number of short talks at farms visited and in these he discussed the dairy cows, barns and silos and the feeding of dairy cattle. The farmers bought a number of head of good stock.

At one farm they found a cow twenty-three years of age, still kept in the herd because she is making a good milk record. She produced 427 pounds of fat at nineteen years of age and had been fed silage all her life. This was considered a very striking evidence for the skeptical, who say that silage eats out the lining of the stomach and causes loss of teeth.

The members of the party were out for the best stock they could get, and they visited Guernsey, Holstein, Jersey and Ayrshire herds. Breeders of the county furnished automobiles for the party, which in two days visited thirty-two farms. Mr. D. F. Burnham, editor of the Waupaca Post, and a progressive dairyman, gave a dinner for the party. Mr. Earl Whipple, of the Delavan Hotel, Waupaca, also gave a dinner for the visiting farmers, city officials and the county board.

A new creamery has been started at Exeland, and the farmers and their banker, Mr. Kasl, are apparently starting out on the right road to keep this creamery well supplied with good raw material.

Feed and Shelter For More Stock.

THE all-important subject in farming communities in Wisconsin is to get better live stock. We are pleased to note that this matter is being given splendid attention in Wausau county. Mr. A. G. Burg, of the Marathon County School of Agriculture, writes that many farmers of his county have an abundance of feed and stable room for stock, but that they have not the capital with which to finance better dairying. On this account they sell their surplus hay and other feeds to the local markets rather than feeding it to the stock and thus keeping up the fertility of the soil. Not long ago fourteen bankers of Marathon county organized an association and appointed a committee to work out a plan whereby farmers could borrow money with which to purchase cattle. The plan is in many ways similar to the Ashland dairy plan and the conditions may be summarized as follows:

The party desiring further cattle makes an application, for the number and price he is willing to pay. Upon receiving the application an investigation is made by a member of the county agricultural school to see whether the farmer in question has sufficient feed and shelter for more stock. If he is favorably recommended, either the principal of the school or the county field man help him in the selection of his stock. The loan is secured by a chattel note on the stock owned by the farmer and is paid in regular monthly installments of 25 per cent of the milk check which the farmer obtains at the cheese factory or creamery.

Mr. Burg writes us that many farmers are taking advantage of this splendid opportunity and the representatives of the different breeds are endeavoring to build up good herds, and in this manner it is hoped to get the largest possible use out of the forage raised on the farms in Marathon county.

Increase in Wisconsin Bank Resources.

IT WOULD naturally be expected that the increased prices which our farm produce is bringing, and the fact that mills and factories of this state are working steadily, would result in an increased supply of money. This is shown to be true by the recent report of the Wisconsin banking department. On November 10, 1915, the total resources of Wisconsin state and mutual savings banks and trust companies of this state, was $253,941,928.61. The last bank call was November 17, 1916, which is practically a year from the date of the statement referred to above. The banking commissioner, Mr. Albert E. Kuolt, advises us that the total resources of Wisconsin banks on the November 17, 1916, call is $298,617,175.61. This is an increase of $44,617,175.65. To increase $44,000,000 in a year is a fine record. So far as we can remember this is one of the best records made in the state, and it certainly indicates a very healthy financial condition for Wisconsin.

Wisconsin Beekeepers.

THE annual meeting of the Wisconsin State Beekeepers' Association, which was held in Madison, in the senate chambers at the state capitol last Thursday and Friday, was one of the best ever held by that organization. About 125 beekeepers and others interested in the production of honey were in attendance at the three sessions. The program was varied and included many topics of interest to beekeepers.

N. E. France, of Platteville, president, who with Gus Dittmer, of Augusta, secretary, were re-elected for another year, made his annual report in which he also discussed the work as state inspector during the past year. As usual the prevalence of American and European foul brood came in for major consideration and Mr. France explained the good work which has been accomplished towards eradicating and controlling this disease in the hives in Wisconsin. Some good results have come from the work, although the foul-brood has not been stamped out, but several speakers pointed out that, with its increasing prevalence in other states, it has become a matter for every individual beekeeper to give his attention. Unless this is done it is difficult to combat the disease which will spread if any keeper allows it to prevail on his premises.

Prices for honey are high at this time, and the beekeepers were pleased with general business conditions. Mr. France reported that about 2,500,000 pounds of honey are produced annually in Wisconsin and that there are about 11,000 beekeepers in the state. The problem for the beekeeper, one speaker pointed out, is to make the honey market an all-year market. At present it differs from other industries in that the price is not set by supply and demand so much as the products of other industries. "Now," as Father Francis Jager, of the University of Minnesota, said, "there is not enough honey on the market or available to last beyond January 1st. After that people will forget about honey and the market will be bare." Father Jager spoke on the need of better co-operation. The present situation is where one farmer sells honey for 6 cents; another undersells him. So that national as well as state co-operation in both production and marketing are needed of the beekeepers are to profit.

The meeting opened Thursday with the routine business followed by addresses that afternoon by Mr. France; C. W. Aeppler, of Madison; Dr. E. F. Phillips, of Washington; and E. R. Root, of Medona, Ohio. The Friday session was devoted to addresses by Edward Hassinger, Jr., of Greenville, Wisconsin; Mrs. William Haberman, of Lodi, G. C. Chase, of Rhinelader; A. L. Kleeber, of Reedsburg; and G. W. Williams, of Redkey, Indiana. Much interest was also shown in the question box and informal discussions.

Of Interest to Wisconsin Dairymen

IN THIS issue will be found reports by our editors of the Wisconsin State Dairymen's Convention, held last week at Waupaca, and the Wisconsin Buttermakers' Convention, held at the same time at Sparta. The latter convention has usually been held in midwinter, but it was thought best this year to advance the date. It would seem better to hold the conventions a different week. Many would like to be present at both. The greatest good from these conventions, however, is the educational work done in the community where the meeting is held. The success of each meeting may be measured largely by the increased attendance over former years.

Determination of Sex in Breeding.

NOW and then a question comes to our office as to whether there is any method known for determining sex in live stock, and, of course, we have to report that, in spite of the many theories that exist in regard to this matter, no one has ever been able to find any of them applicable. We all know that from a herd of cows the calves will, on the average, during a series of years, and usually every year, be half males and half females. It is a matter that is governed by natural law, and probably also to some extent by chance.

Some progress has been made in the study of sex in plants, but it is not of such a nature as to enable anyone to make any use thereof for sex control. It has been found that such plants as strawberries, some varieties of which are male and others female, half of the pollen grains produced by the male plants are destined to produce male offspring after fertilizing an ovule, while the other half are destined to produce female plants. This being the case, the chances are that half the spermatozoids secreted by a male animal will, upon fertilizing an egg of a female of the same species, produce male and the other half female offspring, because the same laws of breeding hold true for both plant and animals, but the knowledge of this fact is of no direct practical value, because it is impossible to control the movement of the spermatozoids. It does, however, have an indirect value, because it shows why breeding in early or late heat, or the physical condition of the female or male at the time of breeding, or a lot of other things that have been supposed to have an influence upon the determination of sex, cannot influence the sex of offspring.

Overfeeding of Lambs.

IT IS a practical impossibility to entirely avoid loss from death among lambs that are being fattened for the market. There is, however, a big difference in the percentage of loss in flocks handled by different men. One feeder will lose 4 or 5 per cent of his lambs during a sixty or ninety-day feeding period, while another will hold the loss down to 1 per cent, or less. The question of why there should be such a difference naturally suggests itself for consideration in these days of high-priced feed and high cost of feeding stock.

One cause of loss is overfeeding, especially during the first three or four weeks of the feeding period. Sudden changes in the feed is dangerous, and when a lamb comes from the range country into the feed lot, the change in feed is often too sudden and too marked for the lamb to adapt itself thereto. In starting lambs on feed, do not be in too great a hurry to get them to eat a lot of grain. Feed hay alone for a few days until they have learned to fill up on this. Then add grain gradually. Start with one-tenth of a pound per head per day and increase this by one-tenth of a pound every other day till one pound per day is being consumed. In this way one pound of grain will be fed at the end of twenty-five days.

After that there will be little danger of loss and the amount of grain may be gradually increased up to the full amount it seems desirable to feed. Whether a heavy grain ration, say two pounds a day, or a light ration of one to one and a quarter pounds, is to be fed will depend upon the size and vigor of the lambs, the length of time they are to be fed, and the relative value of grain and roughage. One can fatten a lamb on a pound of corn and two of alfalfa per day, or on two of corn and one of alfalfa. With the former ration a longer feeding period is required, but in a year like this when alfalfa is relatively cheap and corn very dear, increase in weight will be made at a lower cost per pound of gain. Danger of loss from death in the feed lot is also reduced when a light grain ration is fed. Overcrowding with grain is responsible for nine-tenths of feed-lot losses.

The 1916 International Exposition.

(Continued from page 2.)

try, so that it is a pleasing sign of the times to find such an increasing interest in this great show as was indicated by the visit of these North Dakota farmers.

BREEDING CATTLE.

Short-horns.

GRAND CHAMPION STEER, CALIFORNIA FAVORITE.

Ever Tried It?

Once you see how this dressing will keep the leather in your work shoes soft and pliable, protecting it from barnyard acids and keeping out water, you will never be without it. Made in the tannery from the animal greases used in heavy leather. Get it from your dealer; if he hasn't it, send 10c for full size can.

Champion herd, consisting of one two year old, one yearling and one calf—Escher & Ryan; reserve, Kansas State College.

Carlots Fat Cattle.

For the third time Mr. Ed P. Hall, of Mechanicsburg, Ill., won the grand championship prize in the carload lots, his previous winnings having been made in 1910 and 1912. His load of Angus yearlings were pronounced by Judges Cross and Tamblyn to be the equal in quality, smoothness and finish of any load that has ever won the purple before. In the two-year-old class A. E. Price, Grant Park, Ill., was the winner, with Pinnell & Bennett, Kansas, Ill., second on a carload of Herefords. The following is a complete list of all the winning in the carload classes. Grand Champion Load: Ed P. Hall, Mechanicsburg, Ill., Angus. Champions By Ages: Yearlings—1st E. P. Hall, Angus; 2d J. W. Frazier, Rardin, Ill., Hereford; 3d Miller Bros., Olds, Iowa, Angus. Two year olds—1st A. E. Price, Grant Park, Ill., Angus; 2d Pinnell & Bennett, Kansas, Ill., Hereford; 3d E. P. Hall, Angus. Corn Belt District: Yearlings—1st E. P. Hall, Angus; 2d J. D. Waters & Son, Dawson, Ill., Short-horn; 3d W. C. White, Carrollton, Mo., Angus; 4th C. C. Jackson, Earlham, Iowa, Angus; 5th Hyland Farms, Sharpsburg, Ill., Short-horn. Two year olds—1st A. E. Price, Angus; 2d J. D. Waters, Short-horn; 3d C. H. Redfield, Newell, Ia., Angus; 4th C. J. Hammett, Hartville, Mo., Angus; 5th Paul Ehlers, Lamoille, Ia., Angus. South Central District: Yearlings—1st Miller Bros., Angus; 2d Miller Bros., Angus. Two year olds—1st A. E. Price, Angus; 2d Springer & Johnson, Manhattan, Kan., Hereford; 3d Foster Bros., Earlham, Ia., Hereford; 4th and 5th J. H. Cummings, Short-horn. Southwest District: Yearlings—1st J. W. Frazier, Hereford; 2d J. G. Imboden, Decatur, Ill., Hereford; 3d Dan Casement, Manhattan, Kan., Hereford; 4th J. W. Frazier, Hereford; 5th Lacy Bros., Kansas, Ill., Hereford. Two year olds—1st Pinnell & Bennett, Hereford; 2d J. G. Imdoben & Son, Decatur, Ill., Hereford; 3d and 4th Pinnell & Bennett, Hereford; 5th W. W. Crabb, Delavan, Ill., Hereford. Short-Fed Specials: Yearlings—1st J. W. Crabb, Mixed; 2d L. H. White, Mixed. Two year olds—1st J. G. Imboden, Hereford; 2d E. C. Mathiesen, Bryant, Ia., Hereford; 3d V. Fedderson, Bryant, Ia., Short-horn. Champion Carload: Two year olds—J. G. Imboden, Hereford.

BREEDING SWINE.

Poland Chinas.

Strong competition was met with in the showing of Poland Chinas at the International. The ribbons were well distributed among the various exhibitors and none got more than his share. However, B. F. Dorsey & Sons, Versailles, Ill., succeeded in capturing a few more ribbons than any other one exhibitor. The classes were small in some of the aged lots, but the animals shown were nearly all first-class individuals. The big type of animal was in evidence in the Polands this year and the high quality also was very noticeable. The outstanding boar, Max Sampson, of Sam McKelvie, was made senior and grand champion boar when he defeated the junior champion, Big Jumbo Wonder, owned by J. W. Garvey. The senior boar is a large, smooth, well-fleshed individual and was an outstanding boar in the classes in which he competed. B. F. Dorsey & Sons won the senior and grand champion sow ribbons on May's Quality and the junior champion sow ribbon on Handsome. The senior sow is a wonderful, big-type Poland of great length and fleshing and was easily of grand champion caliber.

Exhibitors: Bean Creek Farm, Hudson, Mich.; G. L. Burgess, Bement, Ill.; B. F. Dorsey & Sons, Versailles, Ill.; Michael Doyle, Elwood, Ill.; Howard B. Francis, New Lenox, Ill.; J. W. Garvey, Thayer, Ill.; S. McKelvie, Fairfield, Neb.; University of Nebraska, Lincoln, Neb. Judge, J. M. Kemp, Kenny, Ill.

Boars: Two years or over (4 shown)—1st Burgess; 2d Dorsey & Sons; 3d Doyle; 4th Bean Creek Farm. Twelve months and under 18 (3 shown)—1st McKelvie; 2d Dorsey & Sons; 3d Bean Creek Farm. Six months and under 12 (3 shown)—1st Garvey; 2d Dorsey & Sons; 3d Bean Creek Farm. Under 6 months (4 shown)—1st and 3d Burgess; 2d Dorsey & Sons; 4th Bean Creek Farm.

Sows: Two years or over (4 shown)—1st Dorsey & Sons; 2d and 3d Burgess; 4th Bean Creek Farm. Eighteen months and under 24 (2 shown)—1st Dorsey & Sons; 2d Bean Creek Farm. Twelve months and under 18 (5 shown)—1st Garvey; 2d and 4th Dorsey & Sons; 3d Burgess; 5th Bean Creek Farm. Six months and under 12 (3 shown)—1st and 2d Dorsey & Sons; 3d University of Nebraska. Under 6 months (5 shown)—1st and 2d Dorsey & Sons; 3d and 4th Burgess; 5th Bean Creek Farm.

Herds and champions: Boar and 3 sows over 1 year (3 shown)—1st Dorsey & Sons; 2d Burgess; 3d Bean Creek Farm. Boar and 3 sows over 1 year, bred by exhibitor (2 shown)—1st Dorsey & Sons; 2d Bean Creek Farm. Boar and 3 sows under 1 year (4 shown)—1st and 2d Dorsey & Sons; 3d Burgess; 4th Bean Creek Farm. Boar and 3 sows under 1 year, bred by exhibitor (4 shown)—1st and 2d Dorsey; 3d Burgess; 4th Bean Creek Farm. Four pigs under 6 months, produce of same sow (3 shown)—1st Dorsey & Sons; 2d Burgess; 3d Bean Creek Farm. Four swine, get of same boar, bred by exhibitor (4 shown)—1st and 2d Dorsey & Sons; 3d Burgess; 4th Bean Creek Farm. Senior and grand champion boar—McKelvie on Max Sampson. Junior champion boar—Garvey on Big Jumbo Wonder. Senior and grand champion sow—Dorsey & Sons on May's Quality. Junior champion sow—Dorsey & Sons on Handsome.

Chester Whites.

An improvement in the quality and smoothness of the Chester White swine was noticeable at the International this year. The showing in all classes was excellent, but the classes were not large, especially in aged stuff. I. T. Cummins, Xenia, Ohio, was judge of the white hogs and Harry T. Crandell, Cass City, Mich., was the leading prize winner, taking many firsts and all the purple ribbons but one. The senior and grand championships in the boar class were won by Mr. Crandell on Schoolmaster, a heavy hog of excellent type, having an enviable past record as a prize winner. The junior champion boar, Schoolboy, owned by Mr. Crandell, is a son of the senior and grand champion boar. In the sow class the senior champion, Model Tena, was made grand champion in a close contest with the junior champion, Miss Repeater, owned by Andrews & Sons, of Sheffield, Ill.

Exhibitors: Adams Bros., Litchfield, Mich.; C. A. Andrews & Sons, Sheffield, Ill.; F. E. Bone, Ava, Ill.; Harry T. Crandell, Cass City, Mich.; E. D. Funk, Shirley, Ill.; Ed Ross & Son, Whitehall, Ill.; University of Illinois, Urbana, Ill. Judge, I. T. Cummins, Xenia, Ohio.

Boars: Two years or over (3 shown)

Loyal to the Service

They Uphold Each Other's Hands

The public *must* be served. This is the dominating thought of the entire Bell organization from the president down. Every employe feels the sense of responsibility that this working principle implies. The public must be served—efficiently, uninterruptedly.

In the fulfilment of this policy, the management of the Bell System realizes that every individual employe must give undivided and undistracted effort and interest to his work.

To assure this, every worker receives adequate remuneration, ample protection in case of illness and provision for old age. All these personal matters are cared for so that the employe has the least possible worry regarding his own welfare. His whole-hearted attention can be devoted to serving the public.

While each employe realizes that he is but a single factor, he understands that not only is supreme personal effort expected of him, but also a loyal support to every other telephone worker.

There is something in the telephone organization which imbues every employe with a spirit of loyalty to the public. All feel a direct responsibility for each other because each recognizes that only by mutual endeavor can they rendet the high standard of service which is expected of them. They uphold each other's hands so that the public may be served.

Last Chance Offers!

Publishing costs advancing over 50%.
Subscription prices to be raised.

THE present high cost of paper, ink, labor, in fact everything that goes into a farm paper or magazine has brought notices from practically all the leading publishers to the effect that there will be a general raise in subscription prices, effective within the next few weeks. In fact, it is doubtful if the special clubbing combination advertised below can ever again be purchased at these prices. We, therefore, suggest that you pick out your club and send in your order today, as we cannot guarantee these prices longer than fifteen days beyond the date of issue in which these bargain offers appear.

Four swine, get of same boar, bred by exhibitor (5 shown)—1st Andrews & Sons; 2d Crandell; 3d Funk; 4th Adams Bros.; 5th Bone. Senior and grand champion boar—Crandell on Schoolmaster. Junior champion boar—Crandell on Schoolboy. Senior and grand champion sow—Crandell on Model Tena. Junior champion sow—Miss Repeater.

Duroc Jerseys.

The opinion was current among Duroc Jersey breeders at the International this year that the showing of red hogs was not as large as in 1913, but the quality and character of stock displayed more than equaled that of the former show. The animals were all of a high standard which made the decisions in the different classes very close. The boar classes were especially puzzling for the judge. R. C. Watt, Cedarville, Ohio, tied the ribbons and his work met with general good favor. Most of the awards went to Ohio breeders, chief among whom were Ira Jackson, of Tippecanoe, and Thomas Johnson, of Columbus. These men divided honors evenly in the championships, Mr. Johnson taking the purple ribbons on senior and grand champion boar and also on senior champion sow, while Mr. Jackson won the prizes on junior champion boar and junior and grand champion sow. The ringside interest in the red hogs was especially keen this year which indicates the growing popularity of this breed of hogs.

Exhibitors: J. Y. Caldwell, Williamsville, Ill.; John L. Fischer, Janesville, Wis.; J. W Garvey, Thayer, Ill.; John S. Goodwin, Naperville, Ill.; Ira Jackson, Tippecanoe City, Ohio; Thos. Johnson, Columbus, Ohio; Mahan Bros., Osborn, Ohio; Henry W. Matern, Lostant, Ill.; W. H. & A. D. Van Moeter, Williamsville, Ill.; H. W. Mumford, Ann Arbor, Mich.; L. L. Shultz, Oxford, Ohio; University of Nebraska, Lincoln, Neb. Judge, R. C. Watt, Cedarville, Ohio.

Boars: Two years or over (6 shown) —1st Johnson; 2d Mahan Bros.; 3d and 4th Mumford; 5th Mahan Bros. Eighteen months and under 24 (2 shown)—1st Goodwin; 2d Jackson. Twelve months and under 18 (6 shown)—1st Van Moeter; 2d Mahan Bros.; 3d Jackson; 4th Mahan Bros.; 5th Mumford. Six months and under 12 (6 shown)—1st Jackson; 2d Mumford; 3d Mahan Bros.; 4th Shultz; 5th Matern. Under 6 months (11 shown)—1st Caldwell; 2d Mumford; 3d Jackson; 4th Mahan Bros.; 5th Matern.

Sows: Two years or over (6 shown) —1st and 2d Mahan Bros.; 3d Matern; 4th Johnson; 5th Jackson. Eighteen months and under 24—1st Johnson; 2d Jackson; 3d Mahan Bros.; 4th Jackson; 5th Mumford. Twelve months and under 18 (8 shown)—1st and 2d Jackson; 3d Mahan Bros.; 4th and 5th Johnson. Six months and under 12 (7 shown)—1st and 2d Jackson; 3d Mahan Bros.; 4th Mumford; 5th Matern. Under 6 months (7 shown)—1st and 2d Jackson; 3d and 4th Mumford; 5th Johnson.

Herds and Champions: Boar and 3 sows over 1 year (4 shown)—1st Johnson; 2d Jackson; 3d Mahan Bros.; 4th Matern. Boar and 3 sows over 1 year, bred by exhibitor (3 shown)—1st Jackson; 2d Mahan Bros.; 3d Matern. Boar and 3 sows under 1 year (7 shown)—1st and 2d Jackson; 3d Mumford; 4th Mahan Bros.; 5th Matern. Boar and 3 sows under 1 year, bred by exhibitor (7 shown)—1st and 2d Jackson; 3d Mumford; 4th Mahan Bros.; 5th Matern. Four pigs under 6 months produce of same sow (5 shown)—1st Jackson; 2d and 3d Mumford. Four swine get of same boar, bred by exhibitor (6 shown) —1st Jackson; 2d Mahan Bros.; 3d Johnson; 4th Jackson; 5th Mumford. Senior and grand champion boar—Johnson on Oakland Orion Cherry King. Junior champion boar—Jackson. Senior champion sow—Johnson on Fairy Queen 1st. Junior and grand champion sow—Jackson.

Hampshires.

Alhough the Hampshire showing was lacking in the number of exhibitors, from the standpoint of quality of stock shown it was a decided success. Judge Charles Marker, of Auburn, Ill., declared that some of the classes were exceedingly close and that the standards were high throughout all the classes. The championship sow classes were especially close and difficult to judge. The J. Crouch & Son sow pulled away from the others in the senior champion class and also defeated the junior champion from the Wickfield Farm in the contest for grand championship. In the boar classes Wickfield Farm won both the senior and grand championships on Lookout Lad, a big, stretchy fellow of straight lines and sound, strong feet.

Exhibitors: J. A. Connell, Joliet, Ill.; J. Crouch & Son, Lafayette, Ind.; John R. Lewis, Rensselater, Ind.; Wickfield Farm, Cantril, Ia.; Charles E. Bunn, Peoria, Ill.; University of Nebraska, Lincoln, Neb. Judge, Charles Marker, of Auburn, Ill.

Boars: Two years or over (4 shown) —1st Wickfield Farm; 2d Lewis; 3d Crouch & Son; 4th Connell. Eighteen months and under 24 (1 shown)—1st Lewis. Twelve months and under 18 (2 shown)—1st Lewis; 2d Wickfield Farm. Six months and under 12 (3 shown)—1st Bunn; 2d and 3d Wickfield Farm. Under 6 months (7 shown)—1st and 3d Lewis; 2d and 4th Wickfield Farm; 5th Bunn.

Sows: Two years or over (7 shown) —1st and 3d Crouch & Son; 2d Wickfield Farm; 4th and 5th Lewis. Eighteen months and under 24 (6 shown)—1st and 4th Wickfield Farm; 2d and 3d Lewis; 5th Connell. Twelve months and under 18 (6 shown)—1st Crouch & Son; 2d Wickfield Farm; 3d and 4th Lewis; 5th Connell. Six months and under 12 (7 shown)—1st and 3d Wickfield Farm; 2d Lewis; 4th Crouch & Son; 5th University of Nebraska. Under 6 months (5 shown)—1st Lewis; 2d and 3d Wickfield Farm; 4th Connell; 5th Crouch and Son.

Herds and Champions: Boar and 3 sows over 1 year (6 shown)—1st and 5th Wickfield Farm; 2d Crouch & Son; 3d and 4th Lewis. Boar and 3 sows over 1 year, bred by exhibitor (1 shown) —1st Crouch & Son. Boar and 3 sows under 1 year (4 shown)—1st and 4th Wickfield Farm; 2d Lewis; 3d Bunn. Boar and 3 sows under 1 year, bred by exhibitor (2 shown)—1st Wickfield Farm; 2d Bunn. Four pigs under 6 months produce of same sow (2 shown) —1st Wickfield Farm; 2d Lewis. Four swine, get of same boar, bred by exhibitor (4 shown)—1st and 2d Wickfield Farm; 3d Lewis; 4th Bunn. Senior and grand champion boar—Wickfield Farm on Lookout Lad. Junior champion boar—Lewis. Senior and grand champion sow—Crouch & Son on Ranck's Rosie. Junior champion sow—Wickfield Farm.

Yorkshires.

Three exhibitors brought out the Yorkshire showing at the International this year. Although these white, giant hogs are not common in the corn belt, they were objects of considerable interest at the show because of their great size. All the championships were won by B. F. Davidson, of Menlo, Iowa.

Exhibitors: John Campbell, Lynn, Ind.; B. F. Davidson, Menlo, Ia.; University of Illinois, Urbana, Ill. Judge, Andrew Boss, University Farm, St. Paul, Minn.

Boars: Two years or over (3 shown) —1st and 2d Davidson; 3d Campbell. Twelve months and under 18 (1 shown) —1st Davidson. Six months and under 12 (1 shown)—1st Campbell. Under 6 months (2 shown)—1st Davidson; 2d Campbell.

Sows: Two years old over (4 shown) —1st and 3d Davidson; 2d and 4th Campbell. Eighteen months and under 24 (3 shown)—1st Davidson; 2d and 3d Campbell. Twelve months and under 18 (4 shown)—1st and 3d Davidson; 2d and 4th Campbell. Six months and under 12 (4 shown)—1st and 3d University of Illinois; 2d and 4d Campbell. Under 6 months (2 shown)—1st Campbell; 2d Davidson.

Herds and Champions: Boar and 3 sows over 1 year (2 shown)—1st Davidson; 2d Campbell. Boar and 3 sows over 1 year, bred by exhibitor (2 shown) —1st Davidson; 2d Campbell. Boar and 3 sows under 1 year (2 shown)—1st Davidson; 2d Campbell. Boar and 3 sows under 1 year, bred by exhibitor (2 shown)—1st Davidson; 2d Campbell. Four pigs under 6 months, produce of same sow (2 shown)—1st Davidson; 2d Campbell. Four swine get of same boar, bred by exhibitor—1st Davidson; 2d Campbell. Senior champion boar—Davidson on Lake Park Fashion. Junior champion boar—Davidson. Senior champion sow—Davidson. Junior champion sow—Davidson. Grand champion boar—Davidson. Grand champion sow —Davidson on Deer Creek Martha 5th.

Berkshires.

The Berkshires made a good showing this year at the International. Although the classes were rather small in many exhibits, the quality was exceptionally fine and drew forth much favorable comment from the ringside. W. E. Spicer, Bushnell, Ill., was judge of this breed of hogs and his work met with entire satisfaction. In the boar classes the senior and grand champion ribbons went to the East on Baron's Successor, a big, lengthy hog of good type, owned by the Hood Farm. He stood easily over the junior champion, Duke's Bacon Jr., of the Townsend Farms. In the sow classes Duke's Champion Lady 4th was made senior champion and later grand champion. She is a smooth, deep sow of good breed type. The junior sow was Classy Stumpy, of the Sutton Farm.

Exhibitors: Brae Burn Farm, Lake Forest, Ill.; Leon B. Crawford, Hayesville, N. C.; Nelle Fabyan, Geneva, Ill.; J. W. Garvey, Thayer, Ill.; Hamilton Farm, Gladstone, N. J.; Hood Farm, Lowell, Mass.; Jenkens Bros., Orleans, Ind.; McCollister & Barnett, Geneva and Logansport, Ind.; Sheffield Farm, Glendale, Ohio; Chas. A. Steward, Plano, Ill.; Sutton Farms, Lawrence, Kan.; Townsend Farms, New London, Ohio. Judge, W. E. Spicer, Bushnell, Ill.

Boars: Two years or over (5 shown) —1st Hood Farm; 2d and 5th Fabyan; 3d Hamilton Farm; 4th Townsend Farm. Eighteen months and under 24

(2 shown)—1st Crawford; 2d Fabyan. Twelve months and under 18 (3 shown)—1st Townsend Farms; 2d Fabyan; 3d Brae Burn Farm. Six months and under 12 (6 shown)—1st Fabyan; 2d Steward; 3d Hamilton Farm; 4th Brae Burn Farm. Under 6 months (13 shown) 1st and 5th Townsend Farms; 2d Jenkens Bros.; 3d McCollister & Barnett; 4th Hamilton Farm.

Sows: Two years or over (5 shown)—1st and 3d Hamilton Farm; 2d and 5th Fabyan; 4th Townsend Farms. Eighteen months and under 24 (7 shown)—1st Sutton Farm; 2d Brae Burn Farm! 3d Hamilton Farm; 4th and 5th Fabyan. Twelve months and under 18 (10 shown)—1st and 2d Hamilton Farm; 3d Brae Burn Farm; 4th Fabyan; 5th Townsend Farms. Six months and under 12 (11 shown)—1st Sutton Farm; 2d and 4th Hamilton Farm; 3d and 5th Brae Burn Farm. Under 6 months—1st and 2d Jenkens Bros.; 3d and 4th Hamilton Farm; 5th Townsend Farms.

Herds and champions: Boar and 3 sows over 1 year (5 shown)—1st Hamilton Farm; 2d and 4th Fabyan; 3d Townsend Frams; 5th Brae Burn Farm. Boar and 3 sows over 1 year, bred by exhibitor (4 shown)—1st and 3d Fabyan; 2d Townsend Farms; 4th Brae Burn Farm. Boar and 3 sows under 1 year (7 shown)—1st Jenkens Bros.; 2d Hamilton Farm; 3d Brae Burn Farm; 4th Fabyan; 5th Townsend Farms. Boar and 3 sows under 1 year, bred by exhibitor (7 shown)—1st Jenkens Bros.; 2d Brae Burn Farm; 3d Fabyan; 4th Townsend Farms; 5th Sutton Farm. Four pigs under 6 months, produce of same sow (4 shown)—1st Fabyan; 2d McCollister & Barnett; 3d Townsend Farms; 4th Sutton Farm. Four swine, get of same boar, bred by exhibitor (5 shown)—1st Iowana Farms; 2d Fabyan; 3d Brae Burn Farm; 4th Jenkens Bros.; 5th Townsend Farms. Senior and grand champion boar—Hood Farm on Baron's Successor. Junior champion boar—Townsend Farms on Duke's Bacon Jr. Senior and grand champion sow—Hamilton Farm on Duke's Champion Lady 4th. Junior champion sow—Sutton Farm on Classy Stumpy.

Tamworths.

Two exhibitors, Adams Bros., Litchfield, Mass., and University of Illinois, Urbana, Ill., presented the showing of Tamworths at the International. The majority of the firsts went to Adams Bros. In the champion classes honors were divided, the prize for champion boar going to Adams Bros. and for champion sow to the University of Illinois. The breed was judged by C. C. Roup, Iowa City, Iowa.

FAT SWINE.

The interest in the show of fat barrows was keen at all times at the International this year and the exhibits compared favorably with the best shows of former years. The classes were well filled, running from five to fifteen entries in the leading breeds, and the quality was uniformly good. Few inferior animals were shown and the competition was very close in most of the classes. The grand champion barrow class was judged by three men, W. A. Spicer, C. A. Marker and Felix Gehrman, and the purple ribbon, after due deliberation, was tied on the Poland China barrow of H. B. Francis, New Lenox, Ill. The reserve grand champion was the Chester White barrow of Harton & Son, Rushville, Ind., who pushed the Poland China very hard for the grand championship. The black hog was a little larger and smoother, which were the main points that gave it the decision.

Duroc Jerseys.

Exhibitors: J. W. Garvey, Thayer, Ill.; Iowa State College, Ames, Iowa; Ira Jackson, Tinnecanoe City, Ohio; H. W. Mumford, Ann Arbor, Mich.; Ohio State Unviersity, Columbus, Ohio; Pennsylvania State College, State College, Pa.; Purdue University, Lafayette, Ind.; University of Illinois, Urbana, Ill.; University of Minnesota, University Farm, St. Paul, Minn.; University of Missouri, Columbia, Mo.; University of Nebraska, Lincoln, Neb.. Judge, R. E. Watt, Cedarville, Ohio.

Barrows: Under 6 months (3 shown)—1st Pennsylvania State College; 2d Purdue University; 3d University of Missouri. Six months and under 12 (4 shown)—1st and 2d University of Missouri; 3d University of Illinois. Twelve months and under 18 (4 shown)—1st and 2d Purdue University; 3d Pennsylvania State College. Three barrows under 6 months (3 shown)—1st Purdue University; 2d University of Missouri; 3d Ira Jackson. Three barrows 6 months and under 12 (4 shown)—1st University of Missouri; 2d Jackson; 3d University of Illinois. Three barrows 12 months and under 18 (1 shown)—1st Purdue University. Champion barrow—University of Missouri. Champion pen of 3 barrows—University of Missouri. Association specials: Barrow under 6 months (3 shown)—1st Pennsylvania State College; 2d Purdue University; 3d University of Missouri. Barrow over 6 months (4 shown)—1st and 2d University of Missouri; 3d University of Illinois.

Poland Chinas.

Exhibitors: G. L. Burgess, Bement, Ill.; B. F. Dorsey & Sons, Versailles, Ill.; Howard B. Francis, New Lenox, Ill.; Iowa State College, Ames, Iowa; Pennsylvania State College, State College, Pa.; University of Illinois, Urbana, Ill.; University of Missouri, Columbia, Mo.; University of Nebraska, Lincoln, Neb. Judge, J. M. Kemp, Kenny, Ill.

Barrows: Eighteen months and under 24 (8 shown)—1st Francis; 2d Iowa State College; 3d and 4th Francis; 5th Iowa State College; 6th Burgess. Twelve months and under 18 (2 shown)—1st and 2d Francis. Six months and under 12 (7 shown)—1st University of Illinois; 2d and 3d Francis; 4th University of Illinois; 5th University of Nebraska; 6th Pennsylvania State College; 7th University of Missouri. Under 6 months (7 shown)—1st Francis; 2d University of Nebraska; 3d Burgess; 4th Francis; 5th University of Nebraska; 6th Burgess; 7th University of Missouri. Three barrows 18 months and under 24 (3 shown)—1st and 2d Francis; 3d Burgess. Three barrows 12 months and under 18 (1 shown)—1st Francis. Three barrows 6 months and under 12 (6 shown)—1st University of Illinois; 2d, 3d and 4th Francis; 5th University of Missouri; 6th Pennsylvania State College. Three barrows under 6 months (4 shown)—1st Francis; 2d University of Nebraska; 3d Burgess; 4th University of Missouri. Five barrows, any age, get of one sire (7 shown)—1st and 2d Francis; 3d University of Nebraska; 4th Burgess; 5th University of Missouri. Champion barrow—Francis. Champion pen of barrows—Francis.

Berkshires.

Exhibitors: Iowana Farms, Davenport, Iowa; Iowa State College, Ames, Iowa; Ohio State University, Columbus, Ohio; Pennsylvania State College, State College, Pa.; Purdue University, Lafayette, Ind.; Sheffield Farm, Glendale, Ohio; University of Illinois, Urbana, Ill.; University of Missouri, Columbia, Mo. Judge, W. E. Spicer, Bushnell, Ill.

Barrows: Under 6 months (8 shown)—1st Purdue University; 2d Sheffield Farm; 3d Pennsylvania State College. Carlot Hog Awards.

The carlot hogs were the object of great interest at the International and large crowds followed Eck. R. Gentry, head hog buyer for Armour & Co., as he went from pen to pen, judging the different entries in this showing. The decisions of Mr. Gentry were received with entire satisfaction. George Runkle, of Industry, Ill., won the first prize in the carlot class of hogs weighing 350 pounds and over and this lot was later awarded the grand championship of the show. With the exception of the Kansas Agricultural College and Notre Dame University all the prize winners were from Illinois. Exhibitors: Geo. N. Runkle, Industry, Ill.; T. E. Burner, Augusta, Ill.; M. Weinberg, Rushville, Ill.; Kansas Agricultural College, Manhattan, Kan.; F. Pierce, Huntsville, Ill.; G. E. Phillips, Delavan, Ill.; A. R. Clydesdales.

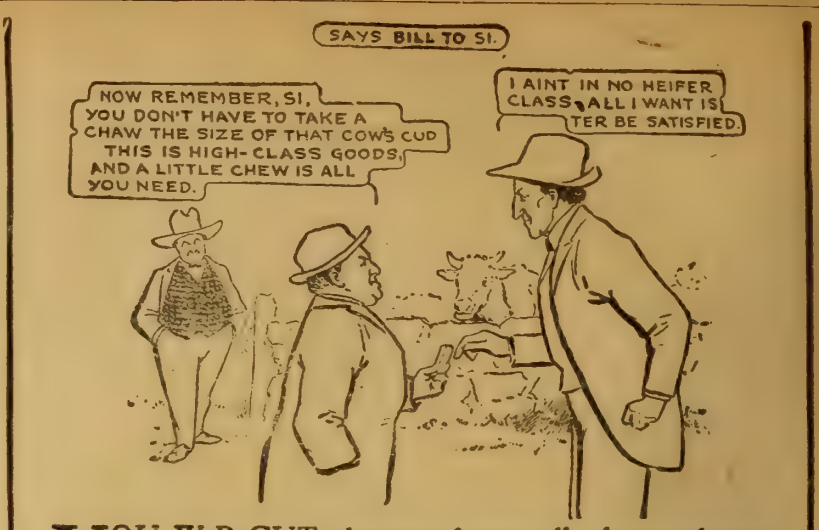
Exhibitors: F. L. Ames, North Easton, Mass.; Garrick Andrews, Cambridge, Neb.; Clyde Aylesworth, Hebron, Ind.; Barron Bros., Elkton, S. D.; Bedminster Farms, Far Hills, N. J.; Belair Farm, Collington, Md.; George A. Cluett, Williamstown, Mass.; Conyngham Bros., Wilkes Barre, Pa.; Ethelwold Farm, Mondovi, Wis.; Fairholme Farms, New Market, N. J.; H. Harris



YOU W-B CUT chewers know all about tobacco satisfaction. You feel sort of sorry for users of the old kind. There is so little tobacco satisfaction in tobacco with excess of sweetening, no matter how big a chew they take. It's sort of difficult to make beginners understand how much satisfaction there is in tobacco if it's *rich* tobacco. They will know when they get to be regular W-B CUT users.

Made by WEYMAN-BRUTON COMPANY, 50 Union Square, New York City

Win Valentine Surprise Package

Solve This Puzzle

Here are seven ponies in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this we will send you as a prize, a Valentine surprise package, containing 36 beautiful Valentine novelties, seals, cards and stamps. This is one of the most artistic Valentine packets put out. All you have to do is enclose two 2c stamps in your letter to pay postage and cost of mailing. We will also send a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland pony.

Fine Pony Given Away

Remember the Pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in the great contest. In case of a tie a pony will be sent to each person so tied. Full particulars by mail.

Three, the get of sire—1st and 3d Hawthorn Farm; 2d Okie. Champion stallion—Hawthorn Farm on Hawthorn Morston. Champion mare—Hawthorn Farm on Hawthorn Darling.

THE SHEEP SHOW.

In the fat sheep classes at the International Mr. Frank Kleinheinz, of the University of Wisconsin, failed only by the smallest possible margin to land the grand championship ribbon. He was defeated by Jess Andrews, who showed an exceptionally good Shropshire yearling wether. Reserve championship went to the University of Illinois on a Southdown wether. Several educational institutions took a prominent part in the fat classes, notably the University of California, the Iowa Agricultural College and, as before stated, the University of Illinois. The last won first prize and championship in the Southdown classes. In the fat Cheviots the University of Illinois swept the boards, winning on yearling wethers, wether lambs and also on a pen of three wether lambs. In the breeding classes of Shropshires another Wisconsin firm came well to the top, as Broughton & Sons captured first premium in an entry list of twelve in the yearling ram class. They also won second in the ram lamb class. In the carload lots the championship was won by a load of grade Hampshires exhibited by the Butterfield Live Stock Company of Idaho. These passed over the scales at an average weight of 118 pounds, and they sold at auction at the close of the show for $21.25 per hundred pounds, this being $10 per hundred higher than ever has been paid for the winning lambs at the International. All in all, the sheep show was a most successful one and well it might be because both wool and mutton are now precious products on the American market.

$34.50 WHY PAY MORE? FOR A SEPARATOR NO BETTER THAN THIS

SAVE HALF ON A HIGH CLASS SEPARATOR

Where other separators are good the New Galloway Sanitary is as good or better! Where the others are wrong the New Galloway Sanitary is right—absolutely right! You can get more separator for less money—more genuine, honest, high-grade material and workmanship built into this high quality, beautifully finished, 1917 designed separator than can be found anywhere! I say this advisedly and mean it.

THE GALLOWAY SANITARY
Must Sell Itself to You

I just want you to try it! If you like it, buy it! If you don't, send it back. We pay freight both ways. If the New Galloway Sanitary is as good as I say it is you can't afford to buy any other kind. If it is not as good as I say it is—I could not afford to make this 90-day trial offer—I couldn't afford to guarantee it for ten years—nor to back it with a

$25,000 LEGAL GUARANTY BANK BOND

You save money when you buy this 1917 model Galloway Sanitary Cream Separator! You make money when you use it. Some separators are sold for less money—but there is a reason.

Four New Sizes from 375 lbs. to 950 lbs. capacity per hour.

Capacity not over rated

4 New 1917 Selling Plans EITHER CASH OR TIME

Buy on a plan to suit your purse. 1—Cash with order. 2—Bank Deposit. Deposit the price with your own banker while you are trying the separator. 3—All note settlement—to accommodate our customers who are not ready to pay cash at the time they need the separator. 4—Pay in installments, which gives you a chance to pay for the separator with monthly cream checks and the extra profits that the separator will make you.

BUY DIRECT FROM MY FACTORY

Don't get fooled on separators only assembled by so-called manufacturers and priced at figures you positively know a satisfactory sanitary cream separator can not be built for. Stand the Galloway side by side with cheaper machines and you'll see the difference in material, workmanship, true down to date design and skimming qualities. Stand it beside the highest priced machine. Test them side by side for months. Higher priced machines will not run any easier nor skim any closer—can't be more perfectly sanitary nor better built!

Note these few strong, simple, sanitary parts. Easy to wash clean—no rough edges—no sharp corners. Bowl catches any foreign matter in the milk. Only two shafts in the whole gearing—both of high-carbon steel, in long, perfectly fitted bearings. All gear shaft and both bowl spindle bearings supported by one casting—the gear case. All working parts run in spray of oil. Simple, effective driving clutch on crank shaft.

TRY A GALLOWAY SANITARY FOR 90 DAYS

Remember we took four years to design and perfect this separator—to build into it every good cream separator feature, and retain its beautiful proportions. It has not been built down to a price, but built up to a high standard in our own factories right here in Waterloo. We do not demand a fabulous price for Galloway separators bought on the installment plan. Before buying at elsewhere on this plan, be sure to read, at least, that part of my book about separators.

ASK FOR THIS FREE BOOK

I WANT YOU TO HAVE THIS BOOK. It tells how we build Galloway Sanitary Separators from the ground up. How they are designed—the story of how we perfected this wonderful separator—and many other separator secrets and facts. Chock full of dairy wisdom—a meaty, exact, concise book about cream separators and how they are built. Why by selling direct I can make a machine as good or better than many high-priced separators sold through the three and four profit system. That's why I want you to get this book about separators. It tells the whole story—it tells the truth—it tells the facts—it will settle separator question for you.

State Buttermakers Hold Meeting

Dane County Buttermaker Carries Off First Prize—Exhibit of Butter Was Smaller Than Last Year but of Higher Quality.

INASMUCH as Wisconsin butters a sixth of the nation's bread, it is not surprising that the convention of the Wisconsin Buttermakers' Association at Sparta, Monroe county, last week, was a great success. Over 400 buttermakers were present. They reflected optimism and prosperity. Business has been good for the past year. Prices have been the highest in history. The demand for good butter is heavy and the future is very promising. While the butter exhibit was smaller than at Eau Claire last year, the quality was the best ever shown at a Wisconsin convention. There were 122 tubs scored, against 185 at Eau Claire. Not all buttermakers, apparently, have adjusted themselves to the change in time of the convention. C. E. Lee, who has judged butter at this convention for years, says he has never seen a more uniform high quality exhibit.

L. L. Bolstead, of Basco, Dane county, won first prize with a score of 96.50 . Mr. Bolstead also won state honors in 1913. He is the buttermaker in a small co-operative creamery and if his tub showed anything it showed special quality in flavor, indicating that it had been made from cream of a high standard. Last year he won second and at that time would probably have been first had he not overworked his butter a trifle, having to submit to a cut on body. But that proved a lesson to him and this year with a tub splendid in texture and flavor he easily won the gold watch offered the state winner. G. P. Sauer, of Cedarburg, Ozaukee county, who is always in the high list, won second, while H. E. Griffin, of Mt. Horeb, Dane county, took third.

Mr. Lee, in discussing the lessons to be learned from the exhibit, said the outstanding feature was that the winning butter came from creameries which are demanding a high-quality product from the farmer and that the farmer must realize that if his creamery is to pay him the top price he must deliver to it a product from which butter that will command the best price can be churned. The entire exhibit, so far as texture was concerned, was very uniform. Low-scoring tubs were usually so scored because of rank flavor, probably due to a tainted, poor raw product. "The lesson these buttermakers must learn is to demand the very best product from the farmers," Mr. Lee said. In the judging Mr. Lee was assisted by William Schneider, of Johnson Creek, and O. A. Storvick, of Albert Lea.

The convention program teemed with good things and there were many interesting addresses of interest to both farmers and buttermakers. In the latter class fell an address by E. M. Jackson, instructor or field man for the co-operative creamery in the La Crosse river valley. This association is the first in Wisconsin to employ a field man whose purpose is to work with the patrons in improving the quality of their cream and milk. Mr. Jackson has just completed a year's work and it has proven so successful from the creamery operator's standpoint that several creameries in other counties are planning to go together and employ instructors. Jackson county is soon expected to fall in line. Mr. Jackson went over his work in detail; explained how he had worked from farm to farm with the creamery patrons in pointing out the value of good, clean, high-testing cream, etc., from both the patrons' and creameries' standpoint. As a result, he told of scores of barns being whitewashed, milk and dairy houses being erected, new separators installed, engines installed to operate the seperators, etc.

Prof. E. H. Harrington talked on the value of skim milk; Prof. M. Mortenson, of Ames, Iowa, on business correspondence; Prof. R. M. Washburn, of St. Paul, on the business of the buttermaker; H. B. Holbery, of Coon Valley, on the advantage of hot-water heaters; Prof. F. G. Kraege, of Fort Atkinson, on the importance of creamery ventilation, and Prof. G. H. Benkendorf, of Madison, on the marketing situation. The usual debate existed over pasteurization and Commissioner Weigle, of the dairy and food commission, explained the benefits derived from the license law; Prof. E. G. Hastings, of Madison, the cause and prevention of mold, and L. Dickey, of Glenwood City, discussed the kerosene engine as a source of power. Prof. R. A. Moore addressed a record crowd.

The present officers were re-elected for another year. They are: President, E. J. Morrison, Chetek; vice president, C. Jorgenson, Rose Lawn; secretary, G. H. Benkendorf, Madison; treasurer, F. Werner, Waterloo.

The state and district winners were:

STATE PRIZES.

1st, L. L. Bolstead, Basco; 2d G. P. Sauer, Cedarburg; 3d, H. E. Griffin, Mt. Horeb; 4th, Paul Mehnert, River Falls; 5th, Alex Larson, Nashotah.

DISTRICT PRIZES.

First District—1st, F. C. Thompson, Muwwanago; 2d, W. J. Clark, Lake Beulah.

Second District—1st, J. J. Bartel, Peebles; 2d, L. M. Kohel, Beaver Dam.

Third District—1st, R. J. Else, Helenville; 2d, F. M. Werner, Waterloo; 3d, H. J. Herreman, Black Earth; 4th, A. W. Newman, Black Earth.

Fourth District—1st, Olaf Larson, Gays Mills; 2d, J. H. Quale, Platteville.

Fifth District—1st, M. Mickelson, Westby; 2d, J. D. Simpson, Viroqua; 3d, G. N. Marvin, Black River Falls; 4th, Julius Kretzschmar, New Lisbon; 5th, J. Rasmussen, Leon; 6th, Hans Christensen, Tomah; 7th, Wm. Mehlus, Bangor.

Sixth District—1st, Chris. Christensen, Neillsville; 2d, Joseph Rayer, Thorp.

Seventh District—1st, Grant Winner, Osseo; 2d, L. C. Olson, Galesville.

Eighth District—1st, Lauritz Olsen, West De Pere; 2d, Hubert Bartel, New Holstein; 3d, H. F. Recknagel, Seymour.

Ninth District—1st, L. G. Rogers, Clear Lake; 2d, L. M. Sorenson, Clear Lake; 3d, Homer Townsend, Chetek; 4th, Roy Hayton, Stanley.

Tenth District—1st, Carl Jorgenson, Rose Lawn; 2d, Aug. Lange, Jr., Chelsea.

Special prize to member of the association securing highest score at Minneapolis—Peder Kristensen, Cushing.

WANTED to hear from owner of good farm for sale. Send description—price. O. O. Mattson, 2954 Cedar Ave., Minneapolis, Minnesota.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Rid Flock of Loafers Now.

"Sort your flock now and save money."

This is the advice which J. G. Halpin, in charge of poultry husbandry at the Wisconsin College of Agriculture, regularly offers at this season of the year. He has found that it does not pay to keep hens through the winter that are not laying and for this reason urges everyone to dispose of the loafers.

The best layers, according to Mr. Halpin, are the hens that are first off the roost in the morning and the last to go to roost at night; those that are active and have free crops at night; those that always seem to be busy; and those that are bright eyed and go about singing.

The comb usually shrinks, becomes hard, light colored and rough when laying ceases. The skin on a laying hen is usually smooth, oily and pliable; her abdomen is large, she has a wide pelvic arch and a good depth from keel to pelvis.

Late molting hens are the best layers. Contrary to general opinion, repeated tests show that heavy-producing hens molt late and molt rapidly.

Now is the time to watch the pullets. Don't let them roost in small coops about the yard. They crowd into these places and spend the night huddled together to keep warm; in the early morning when they come out into the chill fall air they are very apt to take cold, and their constitutional vigor is reduced. Good, warm, well-ventilated houses should be provided for the chickens and the pullets should be made to roost in them if they are to be good winter layers.

The Uniform Flock Is the Business Flock.

To the Editor:—At a farmers' institute recently a woman in the audience asked the speaker regarding the matter of preparing fowls for market, that is, in the method of dressing and packing for shipping to city markets.

After a few inquiries the speaker found that the difficulty lay not in regard to the picking and packing but in the size of the packet, so "that it will be all uniform." Now, the uniform business should have begun before the chickens were hatched. The flock should have been uniform, which means all of one breed, and the individuals of that breed as near alike as possible.

"Like" will not always "beget like" in a parti-colored breed, but in general form, as well as size, if the flock has been bred with any attention to the characteristics the carcasses should be very uniform. And do try to keep in mind that it requires a pure-bred fowl first of all, and not only that, it should be kept along one line of families—strain we call it in poultrydom, and the fewer ancestors it runs back to the more uniform the lot.

If a uniform flock, as regarding the breeding, then the only other consideration in the matter is that of age. For best results a chicken should be marketed at about two pounds, while the price is yet high—broiler price, in fact, though farmers say "frying" price. Failing in this, then never try to dispose of them until well rounded out. If there is anything a commission man will not thank you for it is a long, lanky, unripe chicken. You will not thank him, either, when your draft arrives.

It is far preferable to market them as they get into the right condition. No one thinks of lumping all of his hogs or cattle off in the same lot and selling without regard to size or condition. Then why chickens? O, this old, haphazard manner that some of us have of trying our level best to "queer" the whole poultry business! If it were any other one produce it would not have stood the strain half as long as it has, but in spite of all the neglect and abuse heaped upon its luckless head the poultry industry is flourishing and, taking it as a whole, it is paying out 200 per cent on the investment.

If you prefer to dress your marketable poultry, all right. But be certain that it is ready for market. Plan to ship chickens of the same hatch and plan your receptacles accordingly. If you prefer, a neat box that will hold about a dozen can be made more attractive, and attractiveness counts in no place more than in selling poultry products, whether stock or eggs.

Another factor in favor of a uniform flock is that of producing eggs uniform in color and size and even shape has to do with catching the eye of a good customer. This will be found to count more, too, with the coming of co-operative circles that are being formed to dispose of poultry products in the most satisfactory manner. Then, and then only, will the matter be accorded the consideration it deserves. When it comes to a definite question of an extra dollar in the pocket, or loss of it, then will the average person be willing to see.

FARM LANDS.

BUY Oil, Coal, Gas, Timber and Corn Land in Oklahoma. Will sell you from 40 to 320 acres of land in southeast Oklahoma (recently Indian lands) that has enough oak timber on it to pay for it, right in the heart of the oil, coal, gas, mineral fields of Oklahoma. Any 40 acres may be worth a million dollars. Fine corn land, heavy, rich, black, inexhaustible soil. On this land you can produce pork for 3 cents a pound. Price for quick action while it lasts, $4 per acre. Terms if desired. Write today. C. M. Davison, Beaver Dam, Wisconsin.

DON'T POSTPONE BUYING. Land in Aitkin county, the great dairy district, will double in price in a few years. Farmers, take your choice from our lands at a few dollars per acre. Act quickly. Arnold, Land Agent, Rock Island Railway, 153 Wolvin Bldg., Duluth, Minn.

FARM LANDS.

A GOOD 120 at bargain price of $5,500, about $45 per acre. Fronts on nice little fishing lake. Good, nearly new 6-room house, on knoll near lake, hip-roofed frame barn 26x36, silo, old stable, granary 16x20, nearly new, and other improvements. Very handy location on improved state road, rural route, etc. 1 mile creamery and store, near consolidated school, only 6 miles Luck. Level and gently rolling field of around 30-35 acres, balance fine hardwood timbered pasture except a few acres in low land and lake. Rich clay loam soil (sand loam near lake), nice little orchard, some saw timber. An exceptionally nice dairy and stock farm, handily located and at a right price. Come at once. $2,000 will handle. W. M. Christensen, Cashier, Luck, Wis.

FOR SALE—1,080 acres in solid block of red and black loam land, about 100 acres cleared, balance mixed hardwood timber and grass, good buildings; insured for $2,500; fencing and other improvements; good spring water, two trout streams; Bellwood station and Northern Pacific sidetrack on land. State road from Superior to Ashland, just completed through land. In the fruit belt. Best land, location and bargain in northern Wisconsin. Address M. J. Bell, care Bell Lumber Co., Minneapolis, Minn.

FARMS bought, sold and exchanged. No matter where located I bring buyers and sellers together. If you want to Buy, Sell or Trade any kind of business or property anywhere at any price, write me. Established 1881. Bank references. Address Frank P. Cleveland, Real Estate Expert, 1605 Adams Express Bldg., Chicago.

NOTICE: The Official Milking Machine is low priced, classy, simplest, easiest to clean and most sanitary. None better regardless of price. Sold on "Your Money Back" guarantee. Mail orders solicited and I'll send an expert to install and start machine. Reliable agents wanted. Address F. C. Coward, Distributor, Elkhorn, Wis.

WISHING to retire on account of age, I offer for sale a controlling interest in a prosperous bank of $30,000 capital, carrying with it the presidency at a good salary, together with a nice, brick cottage home and eighty acres irrigated land near town, in a flourishing, South Texas community. Address "L" care of this paper.

SNAP IN 40 ACRES: Clay loam soil; lies gently rolling; 8 acres natural meadow; 2 miles from station; only $450; terms to suit. The Ev. Luth. Colonization Co., Merrill, Wis.

SEVERAL tracts choice cutover hardwood land for sale. Surrounded by improved dairy farms in wonderful central Wisconsin. Adam Paulus, (owner), Marshfield, Wis.

103 ACRES, 35 cultivated, balance timber. Black loam; 2 miles station; creek through it. Cheap for cash. Terms. E. O. Bonesville, Caryville, Wis.

FOR SALE or exchange for wild land in southwestern Nebraska, live stock farm of 760 acres 2½ miles from town. Write Albert Ferdon, Pittsville, Wisconsin.

$12,000 BUYS 160 acres, good soil, $3,000 improvements. Oscar Thompson, R. 1, Morris, Minn.

FOR SALE—Prize-winning, full blooded Buff Orpington cockerels. I have some beauties. Mrs. Harry Hardwick, Route 1, Edgerton, Wis.

FOR SALE—10. mo. Guernsey bull sired by richly bred Glenwood, Blue ribbon calf. A dandy. Price reasonable. W. A. Lawson, Rosendale, Wis.

ARE YOU GOING TO BUY LAND?

IF so, get a copy of our journal first. It has lands, city property and stocks of goods advertised in its columns from nearly ev ery state, so that you can find just what you're looking for in its columns. AUTOMOBILE SCHOOL

LEARN a business in 6 weeks. No books. Easy to learn. Good salary. Free catalog. National Auto School, 2814 No. 20th St., Omaha, Neb.

WANTED to hear from owner of good farm for sale. Send description and price. Northwestern Business Agency, Minneapolis, Minn.

POULTRY AND PET STOCK.

THE WINNEBAGO REDS

ARE now in the market. Excellent quality, standard weight cockerels and pullets. High-class exhibition and common laying stock. Satisfaction guaranteed or no sale. **Winnebago Poultry Yards, R. 23, Omro, Wis.**

HOUNDS: Coon, Fox, Wolf, Deer, and Rabbit Hounds; pedigreed and eligible to reg. Young and old stock for sale. Sent on ten days' trial. Money back guar. Otis Slater & Son, Oconee, Ill., Succes'rs to R.F.Johnson, Assumption, Ill.

Single Comb White Leghorn Cockerels

FOR sale. March hatch, of a great laying strain, at $2.00 each. A rare opportunity to get high-bred birds at a low price. Greenwood Poultry Farm, Route 5, West Allis, Wisconsin.

"ARISTOCRAT" Silver Wyandottes. Cocks, cockerels, hens and pullets. Better than ever. Write me your wants. Frank Faha, Jr., Box 620, Dyersville, Iowa.

BABY CHICKS and eggs from trap nested, pedigreed Barred Rocks and S.C.White Leghorns with wonderful egg records. Write for circular to Amos G. Norman, Dept. D, Chatsworth, Illinois.

HATCHING EGGS; prize-winning S.C. Reds, White Wyandottes, Buff Orpingtons, S. C. White and Brown Leghorns, $1.50 per 15. Ledge View Poultry Farms, Box W.F., Fond du Lac, Wis.

HATCHING EGGS; S. C. Reds, prize-winners all leading shows. Eggs $1.50, 15; $8, 100. Order from this ad. Address C. L. Pre-Fontaine, Box 600, Fond du Lac, Wisconsin.

BREEDERS Cheap, all varieties chickens, ducks, geese, turkeys, bantams and guineas. Also incubator eggs. Bare Poultry Co., Box 650, Hampton, Iowa.

SOME extra large, choice, heavy-boned Mammoth Bronze turkey toms and hens. Stock for sale, prices reasonable. O.C.Olson, R.2, Strum, Wis.

SINGLE COMB BUFF AND WHITE Leghorn cock'els. Charles Schmit, Hortonville, Wis.

WHITE and Barred Rocks from prize-winning stock. Yearling hens and males. Early pullets and cock'ls. Mrs. J. F. Bloom, R.1, Stillwater, Minn.

FIFTY varieties chickens, ducks, geese, turkeys, guineas. Low prices to make room. Catalog free. Dell Walrath, Box S, Janesville, Minn.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorosen, Shell Lake, Wisconsin.

DAIRY

Wisconsin Dairymen's Meeting.

Waupaca Proved to Be a Good Center For This Annual Gathering and a Great Deal of Good Was Accomplished by the Meeting.

THE forty-fifth annual meeting of the Wisconsin Dairymen's Association, the pioneer of agricultural organizations in Wisconsin, was held last week at Waupaca, Waupaca county. It may be truly stated that this was the best meeting ever held by the association. The attendance was large, the meeting hall being taxed at every session and farmers came for miles by auto and by team to listen to the gospel of better dairying.

Waupaca proved to be a splendid place for the meeting. The center of a cow-testing circuit that has attracted to itself considerable attention, because of the work accomplished in weeding out the unprofitable cows, the use of only tried and pure-bred sires and co-operative buying of feeds, this meeting drew naturally from a section where farmers are interested in every progressive note in dairying. So it was a fitting recommendation to the work of the Waupaca and Butternut Ridge Association that this should be the best meeting of the dairymen's association, the principal activities of which is the cow-testing association work. There also exists in Waupaca a spirit of co-operation between business man and farmer that is entitled to special mention. Much of the success of the meeting is due to the business men of that city who entered into the occasion with much interest.

When this association was first organized, forty-five years ago, Wisconsin's dairy products were worth less than $1,000,000 annually. It would be interesting to know at this time what they are worth, although the last available statistics place the value at more than $110,000,000. Large as this increase has been there is abundant room for improvement and no better description of the increase that has come during the life of this association is available than this excerpt from a greeting from ex-Gov. W. D. Hoard, one of the organizers, who was unable to attend because of his advanced age:

Standing where I do in these later years, I can see the broad panorama of dairy development in all lines spread out before me over these forty-five years of the life of the Wisconsin Dairymen's Association. Nearly all of our especial features, such as the Dairy School at Madison, the Farm Institutes, the expansion of dairy husbandry, in many ways found their origin in the Wisconsin Dairymen's Association.

What a wonderful force it has been, working upon the minds of our farmers to the enlargement of their knowledge and judgment in the making of prosperous dairy farmers. My vision and memory of all these mighty results cannot last many years more, but I am glad I have lived amid these fruitful years, and I bid you be of good cheer. Keep your eyes to the front. Be forward looking. Have faith in the renovating power of sound knowledge and the stimulating effect of a broader intelligence.

Here is a simple question for every farmer to ask of himself: Who are the most prosperous dairy farmers, the best representatives of this great industry? Are they the most intelligent and progressive or the most ignorant and unprogressive? Apply those questions as a touchstone to your own lives and you need not fear the result.

As the principal activity of the association now throughout the year is the cow-testing work, the report of Mr. Noel Negley, assistant to Mr. H. C. Searles, state superintendent of these associations, was very interesting. It revealed that this association has to its credit the organization of 184 associations with 5,660 members and 83,864 cows and that there are now in operation in Wisconsin fifty-five associations with 1,681 members and 26,425 cows.

The program was well balanced and there was something of interest to the farmers at every session during the three days. Mr. George Moss, tester of the Waupaca and Butternut Ridge Association, gave a report on his three years of work in that section, pointing out the lessons that have been learned by those for whom he tests. He emphasized the value of good care and good feeding. It is essential to have good animals, but a good cow with poor care and poor feed is a failure with the poor cow. This was illustrated by the experience of one member whose cow gave 295 pounds of fat before he took up the careful study of feed and care. Now this same cow has a record for nine months of 459 pounds of fat and should run close to 600 pounds for the year. In nine months this cow has given this farmer a net profit of $119. His expenditure of $46 for feed would have startled him two years ago and Mr. Moss has figured that it was worth $50 a month to this farmer to be a member of the association. He also presented other lessons, all bearing on the value of association work. But to get the greatest good from association work he pointed out that the farmer must take an interest himself; he cannot rely entirely on the tester who comes once a month, as successful testing is an everyday job if the boarders are to be eliminated and the cows brought to a state of highest production.

Considerable interest was manifest in the milk contest conducted by Mr. C. E. Lee, of the dairy and food commission. Something like a dozen samples were submitted and subjected to the sediment test and the test for flavor. From this contest Mr. Lee drew a few lessons in pointing out how to produce the right kind of milk on the farm. The prizes in this contest were awarded with Anton Peterson, first; Guy Anderson, second; F. R. Constance, third; Fred Jorgenson, fourth, and C. C. Boyce, fifth.

The election of officers resulted in choosing Mr. Math Michels, of Peebles, to succeed himself as president, and Mr. Paul C. Burchard, of Fort Atkinson, to continue as secretary. Wausau, Marathon county, extended an invitation for the meeting next December.

Mr. W. J. Dougan, of Beloit, who supplies that city with milk, spoke on making clean milk and pointed out that there are three essentials embodied in the idea of clean milk—the cow, the utensils and the dairyman. The factor overshadowing all he considers the man himself. Others who spoke were Mayor Holly, who gave the address of welcome; Senator C. H. Everett, of Racine; President Michels; Mr. W. H. Clark, of Rice Lake; Mr. John Michels, of Peebles; Mr. J. G. Poynton, of Fort Atkinson; Mr. A. J. McGuire, of St. Paul; J. Q. Emery, of Edgerton; F. G. Swoboda, of Antigo; A. J. Glover, of Fort Atkinson; F. M. White, of Madison, and F. R. Constance, of Waupaca. An interesting sidelight was a visit to the dairy farm of Mr. John Erickson, of Waupaca, who has built up his herd from the profits of the farm and every female is of his own breeding. Not in twenty years has he bought a female. An entertainment in the school auditorium and a banquet the following evening all tended toward the success of the meeting.

Here's Where it Tells-

It isn't a question of sentiment whether or not your cows are in the pink of condition—but it does make a big difference in your bank account. Since you are keeping cows for milk instead of for meat, better see to it that their milk-producing organs are kept working normally.

At the first sign of decreasing milk-flow, look for the cause. Ten to one it is due to some trouble with the digestive or genital organs, and such disorders are best set right by the use of Kow-Kure, a cow medicine backed by twenty years of success. Try Kow-Kure on your poor milkers and watch results. Hundreds of doubting cow owners have been convinced that this old remedy has no equal for the prevention and cure of Abortion, Barrenness, Retained Afterbirth, Milk Fever, Lost Appetite, Scouring, Bunches, etc.

Buy Kow-Kure from your feed dealer or druggist; 50c. and $1.00.

KOW-KURE

THE LITTLE FORD MILK STOOL

A DANDY CHRISTMAS PRESENT

It has a backward and forward movement; a sliding seat; and a swinging pailholder: adjustable to fit any ordinary sized milk pail. You can adjust the height of the pail up or down. It is built of steel and will last a lifetime. Big seller. Every farmer wants it. Send $1.50 for sample and our proposition to AGENTS.

LITTLE FORD MILK STOOL CO. — WATERLOO, IOWA

25 CENTS CALF RENNETS

We pay 25c each for salted rennets from milk-fed calves, if handled according to our directions. Little work to handle them. Write for directions. Address THE MARSCHALL DAIRY LABORATORY Madison, Wis.

50c BUTTER

Makes Imperative the Use of an Improved

DE LAVAL CREAM SEPARATOR

WITH the certainty of the highest prices ever known for butter this winter, no producer of cream can afford to run another month without a modern De Laval Cream Separator.

This is true whether you have no separator, or an inferior make of machine, or even an old model De Laval machine.

The waste of butter fat is relatively greatest in winter, either with gravity skimming or a poor separator.

At present cream and butter prices, a new De Laval machine will almost surely save its cost within three months, and go on doing so thereafter.

There can surely be no good reason to delay the purchase another week, and if it may not be convenient to pay cash, it may be purchased on such terms that the machine will easily pay for itself.

See your De Laval agent immediately or, if you don't know him, address the nearest De Laval main office as below for any desired particulars.

The De Laval Separator Co.
165 Broadway, New York 29 E. Madison St., Chicago

PICTURES IN THE MIND.

By R. Q. Wickham.

The artist paints a picture,
It's perfect of a kind,
But really not to be compared
To pictures in the mind.

Those pictures in the mind that rise
Like snow-white clouds in summer skies,
In distant space they seem so clear,
But overhead they disappear.

Now welcome these mind pictures,
The retrospective kind;
That take us away from the present
From this everlasting grind.

That carry us back to childhood
And the scenes along the way—
To the brightest spot on mother earth,
To where we used to play.

It makes no difference who we are,
Or where on earth we roam—
These pictures flash across the mind
And take us way back home.

It matters little whom we love
This one or another,
The loveliest picture in our mind
Is that of sainted mother.

God bless good moving pictures,
Of every make and kind;
But shower a generous blessing on
Those pictures in the mind.

Eldridge, Cal., Nov. 18, 1916.

Scalloped Facings Attractive

The scalloped facings may be of interest to the woman who has more time than money at her disposal. They are just as strong and serviceable as the plain facings, and add a decorative touch to the garments upon which they are used. Ruffles finished in this way are very pretty and require no other trimmings.

The facing is laid along the edge of the garment to which it is to be sewed right side of facing to right side of garment, pinned in place, and cut into points or round or square scallops. Next the facing is basted at its lower edge to the garment and stitched in about an eighth-inch seam. The facing is then turned to the wrong side of the garment, care being taken to work to out well on the shaped edge and to make the turn come exactly on the line of sewing. The raw straight edge is turned under once and hand hemmed to the garment.

Apple Sirup.

It may not be practical for the average fruit farmer to make apple sirup as a commercial proposition, but during seasons when there are a large number of culls and windfalls, or when markets are glutted, it is a matter of business economy to utilize by-products, and a method of making apple sirup is furnished by H. C. Gore, of the bureau of chemistry of the department:

Wash apples, remove all decayed and worm-eaten spots, and press out juice as usual for cider making. Be sure the juice does not ferment or "work," as only sweet cider should be used for sirup making. The sterilizing, reducing vat, or kettle, should be a third larger than required to hold contents.

Add five ounces of powdered calcium carbonate to seven gallons of apple cider. Powdered calcium carbonate (carbonate of lime), or, to give it its common name, precipitated chalk, is a low-priced, harmless chemical available at any drug store. Boil in kettle or vat vigorously for a period of five minutes. Pour the liquid into vessels, preferably glass jars or pitchers, allow to stand six to eight hours, or until perfectly clear. Pour the clear liquid into preserving kettle. Do not allow sediment at bottom to enter. Add to the clear liquid one level teaspoonful of lime carbonate and stir thoroughly. The process is completed by boiling down rapidly to a clear liquid. Use density gauge or candy thermometer and bring it up to 220 degrees Fahrenheit, or, without thermometer, reduce bulk to one-seventh of original volume. To see whether it is cooked enough, test as you would sirup or candy, by pouring a little of it into cold water. If boiled enough, it should have the consistency of maple sirup. It should not be cooked long enough to harden like candy when tested. When the test shows that the sirup has been cooked enough, pour it into fruit jars, pitchers, etc., and allow it to cool slowly. Slow cooling is important, as otherwise the suspended matter will not settle properly and the sirup will be cloudy. A good way to insure slow cooling is to stand the vessels full of sirup in a bucket or a wash boiler of hot water. They may also be placed in a fireless cooker. The white sediment which settles out during cooling is called "malate of lime" and is a harmless compound of lime with the natural acid of the apple. When the sirup is cooled it should be stored in fruit jars or bottles. Place the rubber cap or cork in position and tighten. Then place the bottles or cans of sirup in hot water and sterilize for twelve minutes in hot-water or wash-boiler outfit, ten minutes in water-seal outfit, eight minutes in steam-pressure outfit under five pounds of steam, or five minutes in aluminum pressure cooker under fifteen pounds of pressure.

Apple sirup made by this method is a very palatable and high-grade product. It has a flavor much like the thick sirup or jelly which is so often formed when apples are baked with a little sugar. As shown by experiments made by the government experts, this apple sirup can be used in cooking with good results, as well as for table purposes.

Reducing High Cost of Living.

To the Editor:—I want to write a few lines on home problems. I hear so much just now about reducing the high cost of living and it seems to me that if housewives would be more careful in the autumn in laying in supplies for the winter the cost of living would not be so high.

Take, for instance, butter. If packed when fresh in the fall it will keep all winter. My method is to wash the butter thoroughly in fresh water until the water runs clear. Then salt, using one ounce of fine dairy salt to one pound of butter. Work three different times, the last time making into rolls the size desired. Put these in a nice, clean, whole jar. One or two-gallon jars will do. Then make a strong brine and pour over your butter. As you make more butter put it in the jar until the jar is nearly full. Then tie a strong paper over the top of the jar to keep out dust. When you want to use any of the butter all you need to do is to get a small roll, put it in some fresh water for a short time to freshen out some of the salt, and there you have better butter at a cost of half the market price you would pay were you to buy from others.

Another thing housewives can do to keep down expenses is to cure and dry their own beef. It will keep until late in the summer. The way we cure it is to cut the choicest cuts of the hind quarter in pieces of two and one-half to three pounds, salt dry for eight to ten days, then take out of the salt, wash the salt off, let dry, and smoke for two weeks with hickory sawdust or other old hickory wood which is handy. You will have as nice dried beef cured in this way as you can find anywhere. We much prefer it to the canned stuff on city markets.

Then there are the vegetables which may be canned or packed in sand and put in the cellar for winter use. Apples, also, must be picked over quite often and those that cannot be kept may be made into apple butter or canned for sauce. Eggs will keep nicely if put in some dry oats when fresh and kept in a dry, cool place. Do not put them in the cellar or any place where it will be damp, because they would not keep.

These are just some of the things that we can do to reduce the high cost of living, but I think each one of them is quite a little item in itself.

Mrs. B. H. B.

Charcoal For Rancid Lard.

To the Editor:—To restore rancid lard to its former sweetness is a simple matter. Melt the lard to a boiling heat, add thereto a couple of pieces of charcoal the size of hen eggs or larger, according to quantity to be renovated, and boil slowly for one hour. Then strain through a fine cloth. All the impurities will be absorbed by the charcoal.

Someone asked how to get rid of lice on house plants. Finely powdered natural tobacco will drive away or kill all insects that bother plants, shrubs, etc. Sprinkle the tobacco over the plants and you need not fear that it will harm the tenderest of them.

C. F. C.

Inexpensive Christmas Gifts.

To the Editor:—In answer to "Maggie's" request for Christmas ideas I will try to send a few. The "hot pan holder" is a useful and inexpensive gift. Buy either flannel or woolen goods, double it to the thickness you want and cut it about eight inches square. If you can crochet, you may baste the sides together, then crochet all around the edges with any color thread that you want. Then at one corner put a bone ring to hang it up by. If you cannot crochet you may embroider the edges. A little note may accompany the holder. For instance:

Lift a hot pan with me
And you shall soon see
I pay my fee.
Then do not fail
To hang me on a nail.

The safety-pin holder is another nice gift. Buy either white or colored ribbon one inch wide. Then get tin rings and crochet around them. These rings can be bought for 5 cents a dozen. Cut the ribbon in different lengths, from five to seven or eight inches, and tie or sew to the rings, and pin the safety-pins into the rings.

Very pretty towels may be made by buying toweling by the yard, hemming in towel lengths and crocheting a pretty edge or embroidering initials.

If you have many friends to remember you might write each one a letter (a long one) and then instead of using sealing wax use a gay Christmas seal.

Corset bags are made some, too. Buy linen goods, double it once and cut it about six inches wide and one yard long. Then sew the sides and bottom and hemstitch the top. Make a casing and run a ribbon through it. Then embroider the person's initials and you have a very pretty gift.

I am thirteen years old and have never written before, but I hope my little suggestions will help "Maggie."

Brown-Eyed Susan.

Christmas Candies.

Marshmallows.—Soak one envelope of gelatine in ten tablespoonfuls of cold water, boil one pint of granulated sugar in ten tabelspoonfuls of water until it threads, add gelatine to sirup and let stand until partly cooled. Add a few grains of salt and desired flavoring to taste and beat with a whip until it is too stiff to beat longer and then beat with a large spoon until it is soft enough to settle into a sheet. Dust granite pans thickly with powdered sugar, pour in candy about a half inch deep and set in cold place until thoroughly chilled, then turn out, cut into cubes and roll in powdered sugar. This will make more than 100 marshmallows. Nuts, chocolate, fruit juices in place of water, or chopped candied fruits may be added, or the plain marshmallows rolled in grated cocoanut before being sugared. Dates stuffed with this confection are delicious.

Christmas Cream.—Two cupfuls of white sugar, one-half cupful of corn sirup, one-fourth cupful of water. Boil until it will spin a long thread when dropped from a spoon. Pour over the stiffly beaten whites of one egg, flavor with three-fourths teaspoonful of orange flavoring, add nuts if desired, and beat until stiff.—M. H.

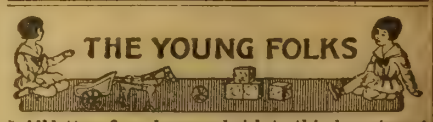
Raisin Drops.—Chop fine one cupful of raisins and work into them a third of their weight in sugar, using a few drops of strained honey to bind. Mold into any shape desired and dip into melted chocolate.

Peach Dainties.—Strain the juice from a jar of peaches, and put them through a fine sieve. To each pint add a cup and a half of sugar. Bring to the boiling point very slowly, stirring constantly. When a drop of the mixture will stay set on a plate, remove from the fire and drop on waxed paper; when cold dip in melted chocolate.

Candied Nuts.—Boil equal parts of water and sugar. To test, dip in a clean steel knitting needle, pull it out and if when the sirup which clings to the needle is cool it cracks, the sirup is ready. Have ready some blanched nut meats of any kind desired. Dip into the sirup. If they are not thoroughly coated, dip again, and a third time if necessary. Dry on sheets of waxed paper.

Pulled Candy.—One cupful of sugar, one-third cupful of water, one tablespoonful of butter, lemon, orange or vanilla flavoring. Boil without stirring. Try by dropping in cold water. It should keep its shape in a hard ball. Pour on greased surface. Add flavoring and coloring matter if desired. As soon as it can be handled pull until stiff. Twist or braid and cut with scissors.

Fondant.—To five cupfuls of sugar add one and one-half cupfuls of water and one-fourth of a teaspoonful of cream of tartar. Stir until the sugar is dissolved, but no longer. Cook slowly to the soft ball stage. Wipe down the crystals from the sides of the vessel with a damp cloth wrapped around a fork. When done pour the sirup on a platter. When cool enough to allow the fingers to be held in it, stir with a wooden spoon until it creams. Then knead until smooth. Wet and wring a small towel, place over the fondant, and allow it to remain for an hour. This may be used for making creams, fudge, stuffed dates, chocolate creams, fruit centers, maple creams, caramel creams, cocoanut creams, etc.



All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Leaves.

Dear Young Folks:—I am a boy eleven years old and in the sixth grade. I live on a farm about a mile from town. I have a dog named Rover, a cat named Beauty and a colt named Betty. I am sending you a poem that I wrote the other day. I called it "Leaves:"

First thing that is to appear
In the springtime of the year
Are the little buds so small;
Soon the summertime will call.

Now in shady summer woods
Birds are bulding in the leaves;
They are twittering in the trees;
They are sporting in the breeze.

Now in silent autumn woods
The trees are turning brown,
For the leaves are falling down—
Softly, softly, without sound.

Some are red; some are yellow;
Some are orange; few are green.
Oh, the happy autumn woods,
Prettiest woods ever seen.

Children rake them up in piles
In the fields and off the lawn,
Then at evening and at dawn
Fires are seen everywhere.

Thus like persons are the leaves,
For a world they have the trees;
Once they were in their prime,
Now they sigh for such a time.

—John Vincent Burland.

Grace's Twin.

Dear Young Folks:—I have been reading the Young Folks' page and I thought I would write a letter to let Grace know that she has a twin. I am eleven years old and my birthday is on the second of January.

I live on a farm of 400 acres. I like to live in the country. I go to a new school which was built this summer and I am in the sixth grade.

During vacation this summer I visited my uncle, who lives near a lake. I had a boat ride and picked some water lilies. —Paul.

The Things That You Want the Most

This Book Tells You How To Get Them

IS it not a fact that the things you want the most seem the hardest to get? Have you wished and waited, oh, so long, for some little luxury that you wanted very much, yet hesitated to buy? A tasteful set of Rogers Silver Ware for your table? Or a pretty brooch; a nice book, a pair of gloves; a shopping bag, or any one of a hundred other nice things that you did not wish to spend money for?

You Can Get What You Want Without Cost

Do not hesitate another moment. Send right away for the book that will tell you how to get the things that you want the most without a cent of expense to you. THE PEOPLE'S HOME JOURNAL premium plan will enable any person to obtain innumerable beautiful and useful articles without cost. By this plan can be obtained wearing apparel, household articles, jewelry and the many other things of practical and ornamental utility that you so frequently require for yourself or family.

Thousands Of Beautiful and Useful Presents Given Away

The character of the articles that we are distributing is attractively varied, and in the assortment there is something that will appeal to everyone. Among other things are.

Bound Books	Pillow Shams
Bracelets	Scarfs
Waist Sets	Shawls
Towels	Centerpieces
Scissors	Toilet Sets
Fancywork Outfits	Bed Spreads
Birthstone Rings	Pocket Books
Silver Thimble	Salt Shakers
Aprons	Lace Curtains
Locket and Chain	Gloves
Dinner Sets	Leather Bags
Gold Clocks	Food Chopper
Dressing Sets	Game Boards
Pillow Slips	Dolls
Tea Spoons	Handkerchiefs
Birth Spoons	Petticoats
Rugs	Teddy Bears
Glassware	Novels

and many other nice things for the home and family.

THE PEOPLE'S HOME JOURNAL

80 Lafayette Street, New York

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

1917—Ladies' dressing or house sack. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 yards of 44-inch material for a 36-inch size.

1918—Children's rompers with round collar or square neck outline and with long or short sleeve. The design is cut in 3 sizes: 2, 4 and 6 years. It requires 3 yards of 36-inch material for a 4-year size.

9821—Ladies' one-piece corset cover, in round, square or "V" neck edge. Pattern is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. It requires 1⅞ yards of 36-inch material for a medium size.

1923—Coat dress for misses and small women. The pattern is cut in 4 sizes: 14, 16, 18 and 20 years. It requires 5½ yards of 44-inch material for a 16-year size.

1793—A neat dress for mother's girl. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 3¾ yards of 44-inch material for a 12-year size.

1941—Girl's dress with or without peplum. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 5½ yards of 36-inch material for the dress with peplum, and without peplum 4½ yards for a 10-year size.

1552—Ladies' apron, with sleeve protector and cap. The pattern is cut in 3 sizes: Small, medium and large. It

embraces all styles illustrated, and requires 5⅛ yards of 36-inch material for the apron, ¾ yard for the cap and ⅞ yard for one pair of sleeve protectors, for a medium size.

1653—Girls' dress with or without pockets, and with sleeve in either of two lengths. The pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2¼ yards of 44-inch material for a 4-year size.

1933 Waist-1914 Skirt—A dressy costume. Waist pattern 1933 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require 9 yards of double width material for a medium size for the entire dress with tunic and oversleeves. Two separate patterns, 10 cents for each pattern.

1519—Girls' coat and cap. Pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2¼ yards of 44-inch material for the coat and 1⅝ yards of 27-inch material for the cap, for a 4-year size.

1548—Boys' suit, consisting of a blouse with side closing. The pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2½ yards of 44-inch material for a 4-year size.

1772—A simple, attractive dress for home and porch. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5½ yards of 44-inch material for a 36-inch size.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for December 17th.

The Holy City.

LESSON TEXT—Rev. 21:1-7, 22-27.

GOLDEN TEXT—Behold, the tabernacle of God is with men, and he shall dwell with them, and they shall be his people.—Rev. 21:3.

As we approach the end of the year, our minds turn from the imperial city, where last we have any authentic record of Paul, to the eternal city in which he has so long resided. In lesson ten we studied Jesus Christ in his resurrection glory, the source of all power, King of Kings and Lord of Lords for the redemption of the human race. In Lesson 11 we studied the glorified Christ who is actually working through his churches as the representative of his kingdom upon earth. The succeeding chapters describe in symbols and pictures the discipline and training of God's people during the long generations that followed. In the lesson for today, we have a vision of the final triumph of Christianity when it shall have accomplished its work of redemption in this world.

I. The New Heaven and the New Earth (vv. 1-7). John in vision saw the consummation of the work of Christianity, the visible answer to the prayer which Jesus Christ taught his disciples to pray, "thy kingdom come, thy will be done on earth as in Heaven." Heaven, as well as earth, has been invaded and polluted by sin, but both alike are to be made new. (I Peter 3:10, 11, 13). The true Jerusalem, of which Solomon's was but a type, is of heavenly and divine origin. It comes down out of heaven from God. We know nothing of the inhabitants of the universe of which we are a part, but here we have some scriptural indication of that place where God's children are to be with him eternally. The kingdom of God is among you, but it is eventually to be with God and Jesus in a peculiar and beautiful way. John's announcement came from out of heaven and out of the throne. (1) It was a tabernacle of God with men; rather he shall tabernacle with men. He is to pitch his tent among us (John 1:14 R. V. marg.) It is to be done eventually and permanently. This dwelling of God among us lies at the foundation of the blessedness and glories which are to follow. (2) They shall be his people. Israel had been his people; all nations are to be his people in the fullest sense. (3) God himself shall be with them, not only his tabernacle, but he, himself visibly, personally. (4) He shall be their God, acknowledged in all his infinite claims, and he to them all that God is of love, power, wisdom, holiness and glory. (5) He shall wipe away every tear from their eyes. There will not be a single grief or heartache, unsatisfied longing or tear, for God shall wipe them away, and they will stay wiped away. (6) Death shall be no more. Of all the enemies, death is the last one which shall be taken from the earth. It is sweet to know that this last enemy is to be conquered. (7) There shall be no mourning, crying or pain any more. Every sorrow, agony, remorse, gloom, disappointment gone forever; death, tears, mourning all passed away. It is hard for us to comprehend the majesty and sweep of this great and glorious promise. (See I Cor. 15).

II. The Coming Light and Glory (vv. 22-27). The intervening verses are a wonderful description of the foundation walls and gates of the city. There will be no temple in that city, for it will not be needed. Instead of the temple which stands for the temple of earth there is to be the presence of God, himself, but the lamb is also in the midst of it. Nothing can more forcefully impress upon us the deity and preeminence of Jesus Christ, the atoning lamb, slain before the foundation of the world. This city is to be a city of light and glory. It will not be an illumination by gas nor electricity, for the glory of the Lord shall lighten it.

Summary. What are the lessons for our day from this vision of the new heaven and the new earth? First: That the golden age of the Bible has not yet taken place. There are better times to come than anything the world has yet seen. Second: We have here the positive assurance of the success of our leader and the victory of Christianity in its conflict with evil. Third: The golden ideal of heaven is the means by which we can test our daily lives and the whole course of our conduct. The question we should constantly ask is, "Are we going to this heavenly ideal?" Fourth: The gates of that city are open; an angel is at each gate, and shall keep out all evil. God desires that all men everywhere should repent, and is not willing that any should perish.

When the final assize shall have passed, no one will say that God did not give him a chance nor seek to inspire him to a place of eternal joy at his right hand.

Again there is to be federation of the forces of good. Today we too often find Christian people divided.

Invitation. "And the Spirit and the bride say come, let him that heareth say come, and let him that is athirst come, and whosoever will let him take of the water of life freely."

When turning a hem in a skirt try taking up the extra fullness at the top of the hem with a gathering string. Care should be taken to keep the string taut, otherwise there is a possibility of stretching the skirt. The result is a much straighter line of sewing on the right side of the garment than can be obtained with the small darts so frequently used.

Selling seaweed is one of the functions of the Philippine fishermen. The native women make use of it in the preparation of a dessert much like gelatine.

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

PART III. "Prince Charlie"

CHAPTER X—Continued.

"Have you ever been scared so badly you couldn't yell, Aunty?" he asked, with a bland disregard of the fact that she was just then in danger of roasting herself on the hearth for the purpose of evading him. "No? That's the way you fixed me a little while back, sure enough. I was scared too badly to run, or they never would have caught me."

The only intelligible answer heard from her was: "Go 'long, you!"

He did not "go 'long." On the contrary, he wheeled about in Tillie's chair, and settled himself as if that corner was especially attractive, and he intended spending the evening in it—a suggestion that was a decided surprise to all, even to Rachel, remembering his late conservatism.

Stuart was the only one who realized that it was perhaps a method of proving by practical demonstration the truth of his statement that he was a Pariah among the class who received the more refined character with every welcome. It was a queer thing for a man to court slights, but once inside the door, his total unconcern of that which had been a galling mortification to him was a pretty fair proof of Stuart's theory. He talked Indian wars to Hardy, and Indian love songs to Hardy's wife. He coolly turned his attention to Liteutenant Murray, with whom his acquaintance was the slightest, and from the lieutenant to Miss Fred, who was amused and interested in what was, to her, a new phase of a "squaw man;" and her delight was none the less keen because of the ineffectual attempts in any way to suppress this very irregular specimen, whose easy familiarity was as silencing as his gruff curtness had been the day they met him first.

Beyond an occasional remark, his notice was in no way directed to Rachel—in fact, he seemed to avoid looking at her. He was much more interested in the other two ladies, who by degrees dropped into a cordiality on a par with that of Aunty Luce; and he promptly took advantage of it by inviting Miss Fred to go riding with him in the morning.

The man's impudence and really handsome face gave Fred a wicked desire to accept, and horrify the lieutenant and Tillie; but one glance at that little matron told her it would not do.

"I have an engagement to ride tomorrow," she said rather hurriedly, "else—"

"Else I should be your cavalier," he laughed. "Ah, well, there are more days coming. I can wait."

A dead silence followed, in which Rachel caught the glance Genesee turned on Stuart—a smile so mirthless and with so much of bitter irony in it that it told her plainly as words that the farce they had sat through was understood by those two men, if no others, and puzzled and eager to break the awkward silence, she tried to end it by stepping into the breach.

"You have totally forgotten the story you were to tell us," she said, pointing to the sheets of manuscript in Stuart's hand; "if we are to have it tonight, why not begin?"

"Certainly; the story, by all means," echoed Fred. "We had it scared out of our heads, I guess, but our nerves are equal to it now. Are you fond of stories. Mr.—Mr. Genesee?"

"Uncommonly."

"Well, Mr. Stuart was about to read us one just as you came in; one he wrote since he came up in these wilds—at the fort, didn't you say, Mr. Stuart? You know," she added, turning again to Genesee—"you know Mr. Stuart is a writer—a romancer."

"Yes," he answered slowly, looking at the subject of their discourse as if examining something rare and curious; "I should reckon—he—might be."

The contempt in the tone sent the hot blood to Stuart's face, his eyes glittering as ominously as Genesee's own would in anger. An instant their gaze met in challenge and retort, and then the sheets of paper were laid deliberately aside.

"I believe, after all, I will read you something else," he said, reaching for one of the rolls of manuscript on the table; "that is, with your permission. It is not a finished story, only the prologue. I wrote it in the South, and thought I might find material for the completion of it up here; perhaps I may."

"Let us have that, by all means," urged Tillie.

"What do you call it?"

"I had not thought of a title, as the story was scarcely written with the idea of publication. The theme, however, which is pretty fairly expressed in the quotation at the beginning, may suggest a title. I will leave that to my audience."

"And we will all put on our thinking caps and study up a title while you tell the story, and when it is ended, see which has the best one to offer. It will be a new sort of game with which to test our imaginations. Go on. What is the quotation, to begin with?"

To the surprise of the listeners, he read that old command from Deuteronomy, written of brother to brother:

Thou shalt not see thy brother's ox or his sheep go astray; thou shalt in any case bring them again unto thy brother.

And with all lost things of thy brother's, which he hath lost and thou hast found, shalt thou do likewise.

In any case thou shalt deliver him the pledge again when the sun goeth down.

Stuart ceased after those lines, and looked for comment. He saw enough in the man's face opposite him.

"Oh, go on," said Rachel. "Never mind about the suggestions in that heading—it is full of them; give us the story."

"It is only the prologue to a story," he reminded her; and with no further comment began the manuscript.

Its opening was that saddest of all things to the living—a death bed—and that most binding of all vows—a promise given to the dying.

There was drawn the picture of a fragile, fair little lady, holding in her chilling fingers the destiny of the lives she was about to leave behind—young lives—one a sobbing, wondering girl of ten, and two boys; the older, perhaps eighteen, an uncouth, strong-faced youth, who clasped hands with another boy several years younger, but so fair that few would think them brothers, and only the more youthful would ever have been credited as the child of the little woman who looked so like a white lily.

The other was the elder son—an Esau, however, who was favorite with neither father nor mother; with no one in fact, who had ever known the sunny face and nature of the more youthful—an impulsive, loving disposition that only shone the brighter by contrast with the darker-faced, undemonstrative one whom even his mother never understood.

And the shadow of that misunderstanding was with them even at the death bed, where the Jacob sobbed out his grief in passionate protests against the power that would rob him, and the Esau stood like a statue to receive her commands. Back of them was the father, smothering his own grief and consoling his favorite, when he could, and the one witness to the seal that was set on the three young lives.

Her words were not many—she was so weak—but she motioned to the girl beside the bed. "I leave her to you," she said, looking at them both, but the eyes, true to the feeling back of them, wandered to the fairer face and rested there. "The old place will belong to you two ere many years—your father will perhaps come after me;" and she glanced lovingly toward the man whom all the world but herself had found cold and hard in nature. "I promised long ago—when her mother died—that she should always have a home, and now I have to leave the trust to you, my sons."

"We will keep it," said the steady voice of Esau, as he sat like an automaton watching her slowly drifting from them; while Jacob, on his knees, with his arms about her, was murmuring tenderly, as to a child, that all should be as she wished—her trust was to be theirs always.

"And if either of you should fail or forget, the other must take the care on his own shoulders. Promise me that too, because—"

The words died away in a whisper, but her eyes turned toward the Esau. He knew too bitterly what it meant. Though only a boy, he was a wild one—people said a bad one. His father had pronounced him the only one of their name who was not a gentleman. He gambled and he drank; his home seemed the stables, his companions fast horses and their fast masters; and in the eyes of his mother he read, as never before, the effect that life had produced. His own mother did not dare trust the black sheep of the family, even though he promised at her death bed.

A wild, half-murderous hate arose in him at the knowledge—a hate against his elegant, correctly-mannered father, whose cold condemnation had long ago barred him out from his mother's sympathy until even at her death bed he felt himself a stranger—his little mother—and he had worshipped her as the faithful do their saints and like them, afar off.

But even the hate for his father was driven back at the sight of the wistful face, and the look that comes to eyes but once.

"We promise—I promise that, so help me, God!" he said earnestly, and then bent forward for the first time, his voice breaking as he spoke. "Mother! mother! say just once that you trust—that you believe in me!"

Her gaze was still on his face; it was growing difficult to move the eyes at will, and the very intensity of his own feelings may have held her there. Her eyes widened ever so little, as if at some revelation born to her by that magnetism, and then—"My boy, I trust—"

The words again died in a whisper; and raising his head with a long breath of relief, he saw his father drop on his knees by the younger son. Their arms were about each other and about her. A few broken, disjointed whispers; a last smile upward, beyond them, a soft, sighing little breath, after which there was no other, and then the voice of the boy, irrepressible in his grief, as his love, broke forth in passionate despair, and was soothed by his father, who led him sobbing and rebellious from the bedside—both in their sorrow forgetting that third member of the family, who sat so stoically through it all, until the little girl, their joint trust, half blind with her own tears saw him there so still and as pathetically alone as the chilling clay beside him. Trying to say some comforting words, she spoke to him, but received no answer. She had always been rather afraid of this black sheep—he was so morose about the house, and made no one love him except the horses; but the scene just drew her to him for once without dread.

"Brother," she whispered, calling him by the name his mother had left her; "dear brother, don't you sit there like that;" and a vague terror came to her as he made no sign. "You—you frighten me."

She slipped her hand about his neck with a child's caressing sympathy, and then a wild scream brought the people hurrying into the room.

"He is dead'!' she cried, as she dropped beside him; "sitting there cold as stone, and we thought he didn't care! And he is dead—dead!"

But he was not dead—the physician soon assured them of that. It was only a cataleptic fit. The emotion that had melted the one brother to tears had frozen the other into the closest semblance to stone that life can reach, and still be life.

The silence was thrilling as Stuart's voice ceased, and he stooped for the other pages laid by his chair.

(To be continued.)

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Edgewood Farm Holsteins.

THE Edgewood Farm, Pewaukee, Wisconsin, owned by F. A. W. Kieckhefer, have long been noted as one of Wisconsin's largest dairy farms. It was one of the first farms in Wisconsin where certified milk was produced, and its dairy barns are models in every way. Great care is taken to keep the animals in the best of health, which is very essential in the production of certified milk. At the present time they are offering two fine yearling bulls for sale on page 22. One of these was born May 13, 1915, so is now a year and a half old and can do heavy service immediately. He has been well developed, is of good type and is well marked, being over three-fourths white. His dam, Ollie Ormsby, is a good individual and a good producer. She gave up to 47.5 pounds milk per day on ordinary herd care, milking but twice a day, and she tests about 4 per cent fat. She is sired by a grandson of Duchess Ormsby Piebe Burke, that sired the forty-one-pound cow, Sadie Vale Concordia 4th, and she is out of a grand daughter of Duchess Ormsby Butter King, making her a double-bred Ormsby. The bull for sale is sired by a son of King Hengerveld Pondyke, that has sixteen A. R. O. daughters, two above thirty pounds. He in turn is by King of the Pontiacs, that has 182 A. R. O. daughters, ten above thirty pounds and two above forty pounds. The dam of this bull will be put on test when she freshens again and is a creditable candidate for a good record. The other bull for sale was born October 4, 1915, and is also of good type and is over one-half white. He is a very desirable animal. His fourteen nearest dams average over twenty-seven pounds butter in seven days, which is an average back of but few bulls in the state. In him is combined some of the greatest blood of the breed, viz; King Segis, Blanche Lyons De Kol, the thirty-three-pound cow; Betta Lyons Netherland, the thirty-four-pound cow; Colantha 4th Johanna, the thirty-five-pound cow; King Segis Pontiac; Pontiac Korndyke, and others of equal high production ability. The dam and dam's dam were tested last year and made very creditable records and will undoubtedly increase these records when tested again. Send for extended pedigrees of these two bulls, as they will interest you if you are in need of a herd sire.—Adv.

Buying a Future.

WHEN you buy a herd sire you are always buying a future, as he never produces an immediate profit. You always exercise great care in seeing that he is a good individual and from good ancestry so as to insure as large a profit as possible in the future. There is another factor which you should consider, as it will go a long ways in producing you a larger profit and that is the future opportunity the sire and dam will have to become noted. The herd on the Pabst Stock Farm will have an opportunity to be one of the best-known herds in the United States. The cows in the herd will be given every opportunity to increase their seven-day records and to make yearly records. A new testing barn is just being completed which will provide every facility for both the cattle and the herdsmen to produce large records. The future for this herd is very bright. Any animal purchased from this herd will undoubtedly increase in value within the next year or two. At the present time a very attractive bull is advertised for sale on page 22. You breeders who want an outstanding herd sire should send for a picture and pedigree of this animal. His dam as a junior two year old made 849.21 pounds of butter in a year and gave 20,029 pounds of milk. She was second in her class in the National Association in 1914. There are but few two year olds that ever made such a record. If you want a good one here it is.—Adv.

Fruit Brothers' Guernseys.

THOSE of our readers who have been following the reports of the Waukesha Guernsey Breeders' Association and the reports of the yearly records made by Guernsey cows will have some idea of the kind of cattle that make up the herd of Fruit Brothers, Waukesha, Wisconsin. Animals from this herd have topped the sale several times, one animal selling in the last sale for $975.50. They have also been making some very creditable records. At the present time they are offering some choice yearling bulls for sale that will interest our readers. One of these, born October 29, 1915, was sired by May King's Vrangue of Ingleside, that has five A. R. daughters and six more now on test, going at a very creditable rate. This bull in turn was by May King of Ingleside, that was by Imp. King of the May. He not only is the sire of producers but is an excellent individual, being first prize bull at the National Dairy Show. The dam of the bull for sale is a daughter of Langwater Hayes Rosie King of the May, that has three A. R. daughters and is a son of Imp. King of the May. It will be seen, therefore, that this bull is of King of the May breeding on both sides of his pedigree. Fruit Brothers are also offering another yearling bull ready for service. He was sired by Maybelle's Champion, whose sire is a half brother to the noted bull, Holden 4th. The dam of this bull is out of Moline Butter Girl, a daughter of Lawton Standard, that has three A. R. daughters. Send for extended pedigrees of the two bulls. They are being offered reasonably. See page 21.—Adv.

Short-horn Show and Sale.

ONE of livest state associations in this country, is the Minnesota Short-horn Breeders. This association was formed a few years ago, and no state has come into prominence faster as a Short-horn state, than Minnesota. There is a reason, inside the boundaries of this state some of the greatest herds of the red, white and roan in America are owned. On January 3d the Minnesota Short-horn Breeders' Association will conduct a sale and show at the South St. Paul Stockyards. On the morning of the sale Professor Curtiss will judge the cattle consigned to this sale. Having seen previous sales held by this good association we are glad to say that the offering to be sold January 3d is far superior to any sale ever held at the South St. Paul yards. We have seen many of the Short-horns that are tested and of the seventy head to be sold, the majority are good enough to go into any herd. At the present time there is a great demand for bulls of serviceable age and we want to call special attention to the bull offering of this sale. About twenty-five head have been listed—Scotch and Scotch-topped and some of them have been winners in the shows during the past season. Of the females, one will have a grand assortment of the most fashionable Scotch families, cows representing the popular "topped" families, and for those that want milking Short-horns we are glad to say that some of the best owned in Minnesota

COLONEL of Waukesha, sire of one of the yearling Guernsey bulls advertised for sale on page 21 by L. J. Wendt, Waukesha, Wis.

are listed for this sale. No breed is more popular than the Short-horn. Many Wisconsin breeders are "behind the times." If you have the desire to improve your herd, suitable animals can be found in this sale. This will be a great sale and show and all lovers of the breed should be on hand. The sale will start at 1:30 p. m. In the evening there will be a big banquet. We will have more to say next week. In the meantime, write P. S. Jordan, Secy., Morris, Minn., for one of the instructive catalogs. Will appreciate it if you will mention The Wisconsin Farmer when writing for catalog.—Adv.

A Richly Bred Glenwood Bull.

A SON of Stranford's Glenwood of Pinehurst 3d 16202 is advertised for sale on page 21 by L. J. Wendt, Waukesha, Wisconsin. This bull was born December 5, 1915, so is ready for service. He has a good straight top line and is well marked. His sire is one of the best Guernsey bulls ever owned in Wisconsin. He is a double grandson of the noted bull, Glenwood Boy of Haddon, which is proof of his rich breeding. But he has not only inherited the blood of outstanding individuals but has proven to be one himself. He has been shown fourteen times as a calf, yearling and two year old and has never gone below second place, being first nine times and junior champion five times. His first heifer was junior champion at the National Dairy Show and his daughters made up the first prize breeder's young herd at the same show. The dam of the yearling bull for sale is Lillie Belle of Elder Lawn, a Glenwood-bred cow sired by Eagle Boy 2d. This bull won second at the 1911 Wisconsin State Fair against heavy competition. Send for an extended pedigree of this bull and when writing kindly mention The Wisconsin Farmer.—Adv.

Inter-County Holstein Breeders' Association.

THE Inter-County Holstein Breeders' Association formed by the breeders of Dodge and Jefferson counties is one of the youngest, but one of the best, in the state. The two counties have been known for years as the home of many of the best type and heaviest producing animals of the breed. The two counties are full of cattle of the same blood lines that produced these world's record cows. With such cattle as these the breeders have been able to build up a large association in a short time. Not only have they got animals of good type and heavy production ability but they realize the value of honorable business methods. At the present time they are offering both males and females for sale. They can supply mature animals. Whatever you want in the way of Holsteins can be obtained by writing to the secretary of the association, Francis Darcey, Watertown, Wisconsin.—Adv.

The Duroc Jersey Combination at Owatonna.

STEELE county, Minnesota, has a few live wires in its boundary and some of these are men breeding the Duroc Jersey. They know that they have Duroc Jerseys that compare favorably with the best, consequently on the 3d day of January, the day following the Vanderhyde sale at West Concord, Minnesota, the Steele County Duroc Jersey breeders will give the public an opportunity to see the class of "red hogs" raised around Owatonna, Minnesota. The sale will be held in that town. The writer visited the farms of the various breeders that will make this sale, and we do not hesitate to say that they are selling individuals in this sale that would do credit to many herds. Forty-five head have been cataloged and this number has been selected from five herds, so it stands to reason that it should be a good offering, for when one picks eight or ten from the top of his herd one naturally expects to find as good pedigrees as known to the breed and they have been bred to good boars. One of the three best King the Col. boars that we know of is being used in one of the herds, and some of the good sows are sired by him or bred to him. Another good breeder is using a son of the champion and $1,500 boar, Tommy Doyle. This is some boar and any good breeder will make no mistake if you buy a saw bred to him. Another good boar in this locality is sired by Chief Defender. This boar will make a large one, and we feel sure that some of the best sows in this sale will be safe in pig to this boar. We will have more to say about this sale in next week's issue, but in the meantime get one of the catalogs, for this is a sale worthy of your consideration. You should attend the whole circuit, but if you can't, send your buying instructions to T. P. Shreve, Wisconsin Farmer representative. Please mention this paper when writing to W. V. Gousseff, sale manager, Owatonna, Minnesota, for catalog. See page 18.—Adv.

A Show Bull of Butter Breeding.

IF LIKE produces like, as is the common conviction, we will be interested in seeing the daughters of the young bull advertised for sale on page 21 by Fox Brothers, Waukesha, Wisconsin. He has had good type and high production ability bred into him for generations and intensified in every line of his pedigree. His dam, Beatrix B., is a fine cow and a heavy producer. At two years and five months of age she gave 9,024 pounds of milk and made 428 pounds of fat, which is a very creditable record. She is a daughter of Atwood Prince, whose daughters have been great show winners and good producers. His get of

A PAIR of Dane's September Hampshire weanlings advertised on page 19. Would make a nice Christmas present for your boy.

sire was never defeated. He has seven A. R. O. daughters that at an average of three years five months averaged 460 pounds fat. Among these is Honor Bright, that made 694.65 pounds butter and 12,674 pounds milk at four years of age. The sire of the bull for sale is King Talladeen of Chestnut Hill, that has been first and champion at several leading state fairs and dairy shows and whose offspring have been heavy prize winners. His dam was Talladeen 17,510, that gave 11,907 pounds of milk and made 635.5 pounds of fat. If any young bull is entitled to have good-producing daughters of ideal show ring type this young bull surely is. Send for his extended pedigree. It shows many other just as interesting facts in regard to the blood in this bull's veins. When writing please mention that you saw their advertisement and write up in The Wisconsin Farmer.—Adv.

The Grand Champion, E. J.'s Crimson Wonder.

JANUARY 5TH, the day following the E. J. Wilson Duroc sale, John Swenson will sell fifty head of sows at Willmar, Minn. This will be one of those good sales that we said would be advertised in The Wisconsin Farmer—no matter how far you may have to travel you will not be disappointed with the offering after you get there. There will be daughters of grand champions, for John has two grand champions doing service in his herd. In next week's issue there will appear a half-page advertisement relative to this good sale and you will be interested in it. Watch for it, read the announcement carefully and be sure to write for one of the catalogs.—Adv.

Vanderhyde's Duroc Sale January 2, 1917.

A SALE of Duroc Jersey bred sows that should appeal to Wisconsin and Minnesota buyers will be made by that veteran breeder and showman, F. S. Vanderhyde, at West Concord, Minn., January 2d. Van has been a breeder in the strict sense of the word and he has produced the kind that have won in the strongest competition. Fifty head have been cataloged for this sale, consisting of five tried sows among which will be Roxy, a six-year-old sow that has been the dam of Mr. Vanderhyde's winners for the past four years. She is the dam of Van's Wonder, the 1915 champion at the Minnesota State Fair. Three yearling daughters, one fall gilt and three spring gilts out of Roxy go in this sale. Here is one of the best producing sows in the Northwest and would be an excellent buy for someone wanting to get a start with registered Durocs. Ther will be seventeen fall yearlings and we want to say now that there are some choice sows of this age going in the sale. The twenty-eight spring gilts are up to standard and taken all in all this will be one of the good Duroc Jersey sale offerings of the winter. To show that he has the goods we might mention the fact that in 1915 the Vanderhyde Duroc Jerseys won four out of the six championships at the Minnesota State Fair. This is a sale that all good Duroc Jersey breeders should attend, for there will be desirable stuff in this sale. You should attend in person, but if you cannot you can send your buying instructions to T. P. Shreve who will represent The Wisconsin Farmer at this sale. Your business will receive honorable attention. Send at once for one of the catalogs—it will give you more information than we can in this limited space. Watch next week's issue of The Wisconsin Farmer for more information. Please mention this paper when you write for a catalog. See page 19.—Adv.

It Has Been Bred Into Him.

THERE are three very important things to consider in buying a bull of the dairy breed: First, butter production ability of his ancestors; second, conformation of the bull himself, and, third, whether or not these two most desirable characteristics have been bred into him and intensified in every line of his pedigree. We ran across a yearling bull of this description a few days ago when we visited the Norton Farms at Racine, Wisconsin. He is a cracking good individual and his dam is an equally good animal. She is a big, roomy heifer with a good, big udder well quartered and good teats. A glance at her pedigree shows that she ought to be a good one, as it has been bred into her. His dam has a record of 24.44 pounds butter in seven days and is a grand daughter of Hengerveld De Kol. Her sire is a son of Homestead Girl De Kol Sarcastic Lad, that has 106 A. R. O. daughters, forty-seven of which have records from twenty to 31.18 pounds of butter in seven days. He is also the only bull of the breed to have 3,800-pound junior two-year-old daughters that have given over 19,000 pounds of milk each in a year. The sire of the bull for sale is a son of Pontiac Butter Boy, that has fifty-nine A. R. O. daughters, four with records from 30.12 to 32.34 pounds and twenty-five others with records from twenty to 29.58 pounds butter in seven days. He is a half brother to Hengerveld De Kol and Pontiac Clothilde De Kol, two of the greatest animals in the breed. The pedigree of this young bull explains where he comes by his good conformation. His dam will be tested at her next freshening and is a creditable candidate for a good record. Send for a picture and extended pedigree. When writing kindly mention The Wisconsin Farmer. See page 22.—Adv.

January 4th—Important.

ON the above date, E. J. Wilson, Renville, Minnesota, holds his closing-out sale of Duroc Jerseys. Seventy head have been cataloged which will consist of some outstanding sows and gilts—bred in the "purple" and excellent individuals bred to good boars. Make note of this and be sure to look for the half-page advertisement that will appear in the December 21st issue of The Wisconsin Farmer. This will contain the details of the sale and all breeders of Duroc Jerseys should be interested in this sale.—Adv.

Bloomington Horse Sale.

MGR. C. W. HURT, of the Breeders' Sale Co., claims Jan. 30th and 31st and February 1st and 2d for their annual sale of draft horses of the different breeds at Bloomington, Ill. The sale will be held in the commodious pavilion of the Bloomington Live Stock Commission Co. Manager Hurt will be glad to hear from all who have horses to sell. Address him at Arrowsmith, Ill.—Adv.

McBain's Chester Whites.

WE HAVE just had a letter from L. J. McBain, Bloom City, near Viola, Wis., in which he says that he has sold all of his spring boars, but

has a few long, rugged fall yearlings that he will sell worth the money. These boars are being priced reasonable and they will give satisfaction. Mr. McBain recently purchased an extra good herd boar, a son of the noted Iowa boar, Demonstrator, and out of a daughter of Controller. Here is a good boar and if you want a few gilts bred to this boar write McBain your wants and we feel sure that he will send you Chester Whites worth the money.—Adv.

In and Around Wisconsin

COMING EVENTS.

Winter Course Wisconsin Dairy School, Madison, Wis., November 8th to February 1st.

Wisconsin Poultry Association Show, At Madison, January 1st to 5th.

Wisconsin Cheesemakers' Association, at Fond du Lac, January 10th to 12th.

Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

There will be a $750,000 bond issue to build roads submitted to the voters of Eau Claire county at the next election in the spring. The issue is to cover cost of 110 miles of concrete roads covering the main arteries of travel in the county.

Washington county will also vote on a bond issue for roads next spring. The amount asked for is $500,000. The purpose is to build concrete roads across the county, two or three each way. Good roads boosters are planning to make a strong campaign to get this bond issue.

Clint Clark, of Pardeeville, Wisconsin, recently drew a homestead near Havre, Montana, said to be worth $15,000. The two most sought for tracts in the drawing were No. 79 and 80, and they were both drawn by men named Clark, although the two men could establish no relationship. The two men thought it was a very lucky day for the Clarks. They paid $2.50 an acre for the land and will pay 50 cents an acre a year for five years.

Reports from the Liberty and Clifton Cheese Factory, in Grant county, show that about 8,000 pounds of milk is handled daily, and this is considered some milk for this season of the year. The factory is running every day and will continue all winter. Theodore Bertrand, cheesemaker and manager, secured notable recognition at the last state fair for the fine cheese made in his place. This cheese brings the topnotch price and that is certainly saying something in these times.

Wisconsin rejoices with California in the winning of the steer championship at the International Live Stock Exposition at Chicago. California's Favorite, the grand champion of this, America's greatest live stock show, was raised at the University of California under the personal direction of Gordon H. True, University of Wisconsin graduate, class of 1894, the son of former state senator, John M. True, of Baraboo, who served as secretary of the Wisconsin State Fair for many years.

An order amending the rules of the potato quarantine against Canadian shipments has just been issued by the secretary of agriculture. Hereafter shipments to the United States will be admitted at any port provided they are accompanied by a certificate of soundness, such statement to show that not to exceed 10 per cent of the potatoes show traces of disease. Under the former rules potatoes were admitted only through a few ports where inspection could be made. Application for importation of potatoes must be made to the federal horticultural board, and application must state port of entry.

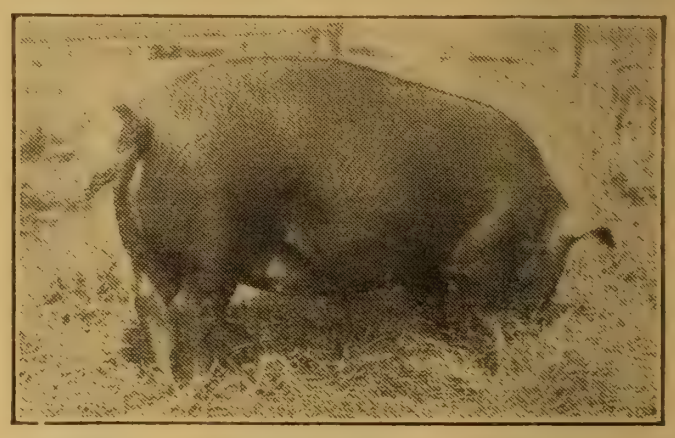
Over 600 men, farmers from North Dakota, stopped in Madison recently and spent a day at the college of agriculture. They were en route to the International Live Stock Show in Chicago, and made several stops in Minnesota and Wisconsin before visiting the state capital. It is said the total wealth owned and controlled by the men in this party was over $120,000,000. This would mean an average wealth of the men in the party of nearly $200,000 and indicates that it was rather a wealthy company. Members of the party were loud in their praise of the college of agriculture and the work done there.

Mr. E. S. Robbins, president of the Milwaukee Milk Producers' Association gives it as his opinion that the high cost of living will drive many men from the cities to the farms. He says that, while the population of the country has increased 100 per cent in twenty-five years, the percentage of farms has decreased. The sudden rise in prices of farm products, he believes, will start people toward the country and change the disposition of country people to flock to the cities. Mr. Robbins says that an embargo on wheat and other farm products would be unfair unless there is also to be an embargo on manufactured products.

DUROCS

Will be sold at OWATONNA, MINN.

WEDNESDAY, JAN. 3, '17



45 HEAD—the tops of 5 herds. Tried sows, yearlings, gilts. The "sifting committee" picked only the best from the 5 herds. You would expect good ones and we have them. Absolutely no culls. We want this sale to make a good reputation for us—will do our part. Sows bred to sons of King The Col., Tommy Doyle, Chief Defender's and A's Defender. A sale worthy of your consideration. Our sale follows Vanderhyde's. Attend both if possible. Send bids to T. P. Shreve, Wisconsin Farmer representative. We want you with us. Col. H. S. Duncan, auctioneer. Write now for a catalog to

Services of Expert Live Stock Photographer

Up-to-date live stock breeders are more and more using photographs in advertising their herds. It is the modern way of doing things, and The Wisconsin Farmer is meeting the situation by offering the services of a skilled live stock photographer. Appointments may be made by mail at any time. For estimates of cost and other information write The Wisconsin Farmer.

The Wisconsin Farmer Sells His Stock.

NATT KIMBALL, of Black River Falls, Wisconsin, is a believer in The Wisconsin Farmer. A few weeks ago he published an advertisement for Red Polled cattle in The Wisconsin Farmer, and here is what he says about the results:

I have received numerous letters and made some good sales through my advertisement in The Wisconsin Farmer.

The Wisconsin Farmer can do the same for any Wisconsin breeder. It goes into more than 36.8 per cent of the farm homes in Wisconsin. Its circulation is 90,000, about 80 per cent of which is in Wisconsin.

The Wisconsin Farmer has proved itself an able salesman for many a farmer and breeder's stock. It goes into more than 90,000 farm homes every week. If you have stock to sell, let it carry your message to the prosperous, progressive farmers and breeders who want good stock. Send your copy today.

The Wisconsin Farmer -:- Madison, Wis.

Guaranteed Circulation, 90,000.

SHORT-HORN HERD BOOK.

New Volume Now Ready For Distribution.

Vol. 89 of the American Short-horn herd book is now ready for distribution. It contains 30,000 pedigrees, of which 11,000 are bulls, numbered from 437,001 to 448,000, and 19,000 cows, numbered from 217,001 to 236,000. The charge for this volume to non-members is $2 and application should be made for it to American Short-horn Breeders' Association 13 Dexter Park Avenue, Chicago, Illinois.

Entomologists of the United States Department of Agriculture have demonstrated that all species of lice which infest poultry may be quickly destroyed by the application of a very small quantity of sodium fluorid, according to the annual report of the chief of the bureau of entomology just issued.

Parched sweet corn or pop corn is appreciated these cool winter evenings. Was any raised on the place this year? Pop corn should be stored in a cool room.

Thoroughly rotted manure makes good mulching for shrubs. It may be spaded into the soil in the spring. A thin covering over the lawn is also desirable to hold the snow and work into the soil during the spring.

RED POLLED CATTLE.

RED POLLS

YOUNG bulls for sale. My herd bull is a son of J. D. Diana 2d 19Proctor 23929. Write your wants. Address L. C. Underwood, Avoca, Wis.

I start the leading Minnesota Duroc circuit—go from my sale to the Owatonna sale, then Wilson and Swenson.

SHORT-HORN CATTLE SHOW AND SALE

Under the Auspices of the

Minnesota Short-horn Breeders' Association

to be held at the stockyard's pavilion

South St. Paul, Minnesota

Wednesday, Jan. 3, 1917

ON JANUARY 3d the Minnesota Short-horn Breeders' Association will conduct at the South St. Paul Stockyards a combination Short-horn Cattle Show and Public Sale. Prominent members of the Association are contributing to this sale a very choice collection of breeding Short-horns, selected by a special committee for their quality. On the morning of the sale all of the cattle consigned will be judged by Prof. C. F. Curtiss, of the Iowa Agricultural College. This cattle show will be one of the most interesting live stock events ever held in the Northwest. The sale proper will begin at 1:30 p. m. The offering includes

70 High-Class Short-horns 70

About one-half of the offering will consist of bulls of serviceable age, the balance cows and heifers of extra quality. There will be straight Scotch cattle, Scotch-topped sorts, as well as consignments from famous herds of milking Short-horns. Whatever you want in Short-horns you will find at South St. Paul. The Minnesota Short-horn Breeders' Association is consigning only choice animals to this sale, selected by a special committee of the association and bearing health certificates from the state. Don't miss this great sale. Col. H. O. Tellier, Auctioneer. For further particulars and catalog write, mentioning The Wisconsin Farmer, the

Minnesota Short-horn Breeders' Association, P. S. Jordan, Sec'y

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

FRANK P. SHEKLETON & SONS **LAWLER, CHICKASAW CO., IOWA**

SIRE: Johanna McKinley Segis, 34 A. R. O. daughters, by King Segis, 87 A. R. O. daughters, and out of Johanna De Kol Van Beers, 40.07 in 7 days, by Sir Johanna De Kol, 65 A. R. O. daughters.

DAM: Pontiac Lady Korndyke, 7 days 38.03, by Pontiac Korndyke, 137 A. R. O. daughters.

Why not buy a bull calf by this sire or our senior sire,

KING PONTIAC CHAMPION

out of one of our A. R. O. cows, with 7 day and yearly records, $100 and up?

PABST STOCK FARM
OCONOMOWOC DEPT. 30 WISCONSIN

WELL GROWN, WELL MARKED HOLSTEIN BULL

BORN December 1, 1915. Ready for immediate service. Sire, Crown Pontiac Korndyke, a richly bred son of Pontiac Butter Boy, that has 59 A. R. O. daughters, 4 above 30 pounds, and that is a half brother of Hengerveld De Kol and out of the same dam as Pontiac Clothilde De Kol. Dam, Stellaris Burke Pontiac 3d 255567, a big, roomy heifer with a fine large udder and good teats. She will be tested when she freshens again. Her dam is a 24.44-pound granddaughter of Hengerveld De Kol. Good type and high production have been bred into him in every line of his pedigree. Buy him now. He will soon be worth twice what we ask now. Send for pedigree. Address
NORTON FARMS RACINE, WISCONSIN

WE CAN SPARE 15 HEAD OF REG. HOLSTEIN FEMALES

YOU may take your choice of any age, assort them as you wish. We have a herd of 52 to select from. Our yearling heifers are by King Johanna Melchior Fayne 101866. Heifer calves by King Elgin Johanna Rue Wa Wa 136698; two-year-old heifer by Sir Johanna Beechwood Fayne 127695; a yearling bull, Valley Champion 165427, for sale. Born June 8, 1915, 7-8 white, very promising. Call and see our herd or write for description. Prices reasonable.
J. P. Goelzer & Sons Plymouth, Wisconsin

A Richly Bred Aaltje Salo Bull

BORN February 28, 1915. Ready for immediate service. His dam, Aaltje Salo Netherland Mechthilde 78488, as a five year old made 23.35 pounds butter in seven days, 38 days after calving. She comes from a long line of heavy-producing ancestors. She not only has inherited this heavy-producing ability, but also transmits it. She has three A. R. O. daughters, one with a record of 28.63 pounds butter as a four year old. Her grandam, Aaltje Salo 5th's Netherland, has eight A. R. O. daughters holding the world's record for five years. The sire of the bull for sale is the 27-pound bull, DAISY JOHANNA 5TH, 1st prize two year old at the Wisconsin State Fair. Address
ARTHUR RUST WEST ALLIS, WISCONSIN

MUST REDUCE OUR HERD AT ONCE

POSITIVELY MUST SELL 100 head of registered and high-grade Holstein and Guernsey cattle, any age. You make take your choice from 400 head of big producers, no boarders among them. Special price on high-grade calves. Also extra fine SERVICE BULLS. Everything guaranteed as represented. **Edgewater Stock Farm, Ft. Atkinson, Wis.**

Two Good Holstein Bulls Ready For Service

NO. 1—Born May 13, 1915, ¾ white, a good individual. His dam is a double bred Duchess Ormsby. Sire, a son of King Hengerveld Pondyke, that has two 30-pound daughters. PRICE $90.00.
No. 2—Born October 4, 1915. Over ½ white. His 14 nearest dams average over 27 lbs. butter in 7 days. Combines the blood of Johanna Bonheur Lyons and King Segis Pontiac. Send for extended pedigree. PRICE $200.00. We can spare a carload or less of high-grade Holstein heifers. Some sired by a 27-pound bull. Address **EDGEWOOD FARMS, PEWAUKEE, WISCONSIN**

DODGE AND JEFFERSON COUNTIES

THE two greatest Holstein counties in Wisconsin. Holsteins from these two counties have made Wisconsin famous. You can buy the same kind of blood now. Our breeders can now supply you with both males and females of all ages. Write Francis Darcey, Watertown, Wisconsin, Secretary, Inter-County Holstein Breeders' Association.

Purebred Registered
HOLSTEIN CATTLE

$123,000 has been expended in the past eight years, by the Holstein-Friesian Association of America, in advertising the merits of the great "Black and White" breed. To the farmer who owns Holstein cattle, this far reaching publicity work is a positive benefit. The continually increasing interest in Holstein cattle throughout America makes for an advance in values, and the breeder of Holstein cattle, wherever he may be, reaps greater profits on the rising market prices of his stock.

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 163, Brattleboro, Vt.

Read How Fortunes Are Made Quick by Pulling Stumps

LET me send you my new, fine free book at once. I want to show you *proof* of how you can turn each acre of stump land into a double profit the first year, in extra crops and added value of land—by pulling stumps with the Hercules All-Steel Triple-Power Stump Puller—and how you can make *big money* in *your spare time* by pulling stumps for *your neighbors* or *by renting* your machine at a *nice fat profit.*

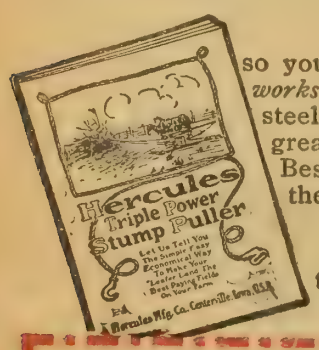
HERCULES
Triple-Power
Stump Puller
120,000 lbs. Pull
ASK US ABOUT IT

My book shows *actual photographs* and prints *actual letters* from many *owners*, telling of the remarkable feats of the Hercules—how it pulls *any size stump, green tree* or *hedge* in less than five minutes—how it easily pulls *an acre a day.* Read how one man increased his land value from $25.00 an acre to $125.00. Read why the Hercules is the *best investment* you can make now. The

Hercules Triple-Power Portable Stump Puller

is the puller that has the single, double and triple power features, giving you three machines in one. One man with a team can handle it and move it from place to place. No heavy lifting. The new portable is equipped with a solid steel bedplate and broad steel wheels. There isn't a stump, green tree or hedge grown that the Hercules won't pull out without straining or breaking any castings. It's the low-down constructed puller that has self-anchoring and stump-anchoring features —the one with double safety ratchets that insure the absolute safety of men and team. I want to send you a Hercules on

30 Days' Free Trial



so you can *see* how *powerful* it is and how *easy it works.* I want you to *know* for yourself that the all-steel construction means 60% less weight and 400% greater strength than cast-iron or "semi-steel." Besides that, I want to save you big money on the cost. I'm making a

Special Price Proposition

to the first buyer in 5000 different parts of the country. If I get *one* Hercules in each locality *more will surely follow* because of Hercules quality and efficiency. So I can easily afford to sacrifice my profit on the *first* machine in each locality. Take advantage of this big profit and big saving opportunity *now.* Besides my 30 days' free trial offer and money-saving price I give you a

3-Year Guaranty

that *means* something. The *all-steel construction, the triple-power* feature that saves your team and gives a tremendous increase of power, the *double safety ratchets* and the careful *turning and grinding of every part*—all these things make it *safe* for us to *guarantee the replacement of any casting of a Hercules that breaks any time within three years, whether it is the fault of the machine or your fault.*

This Free Book Tells All

Just simply send your name and address on the coupon or on a postal so I can send you the convincing facts about the superiority and efficiency and value of the Hercules Stump Puller. Only 5000 of these machines will be sold at this remarkable introductory price, so get your name in now. My new book is a beauty. See the real pictures of big stumps it has pulled out like you would pull weeds. Read the many interesting letters from farmers, lumbermen and land promoters. Stumps, stumps, stumps, pulled out quick, making fortunes for owners of Hercules Stump Pullers. I want you to know the facts. Just mail coupon or postal *now.* I'll send the book and price by return mail. I'll tell you the best crops to raise on virgin land where stumps were before. I simply want to get my free book to you at once, so that you can read the remarkable facts about the Hercules All-Steel Triple-Power Stump Puller and how it does such a splendid work making big profits for owners everywhere.

THE WISCONSIN FARMER

VOL. XLV. NO. 51. THURSDAY, DECEMBER 21, 1916. WHOLE NO. 1821

Wisconsin Hog Farm Which Pays.

THIRTY years ago, when L. F. Atwater was logging on the Wisconsin river in western Wisconsin, no one realized that he would be the constructive, successful hog breeder that he is today. In fact, it was just eight years ago that Mr. Atwater "fell" into the breeding of pure-bred Duroc Jersey swine, many said "Atwater is crazy." But Mr. Atwater had foresight, and his first litter from this boar and the farm-sale sow brought him seven sow pigs and two boar pigs. The two boars he sold for $25; the seven sow pigs he kept. All of these were pure breds. Previously he had raised a few grade Durocs and pure-bred Polands as a side-boar sale this fall. Mr. Atwater, at the very beginning, went straight at many problems at which most beginners would shudder. His first move was a trip to the Iowa State Fair. He had good stuff, but in Iowa he was out of his class. "But I learned something," he told the writer, "and my four boars I sold right there

HOG SALES PAVILION ON L. F. ATWATER FARM NEAR BANGOR, LA CROSSE COUNTY, WISCONSIN. THIS PLACE HAS PAID FOR ITSELF MANY TIMES OVER.

MR. ATWATER'S FEEDNG BARN AND HOG HOUSE. FENCES ARE BEING TORN OUT THIS WINTER AND REPLACED WITH INDIVIDUAL RUNS FOR EACH SOW AND LITTER.

and his success as a breeder covers that period, although he has farmed for twenty-nine years. The Atwater Farm, near Bangor, La Crosse county, Wisconsin, is a splendid example of what hard work and close application to right principles will accomplish. Eight years ago, on October 23d, Mr. Atwater turned up at a neighboring farm sale in his county. He was not really in the market for pure-bred Durocs, having on his farm already a few pure-bred Polands and grade Durocs, but a Duroc sow and her two boar pigs were going cheap, and these he bought for $26. That was the beginning of the Atwater herd and the "home of big Durocs," and the story since then is one of constructive breeding; of success by a man who just sort of tumbled into the pure-bred swine game. For the benefit of those who are not familiar with the show-ring records it might be added here that Atwater Durocs have been consistent winners of the blues and purples at all the recent state fairs and at the recent national swine show at Omaha, and in his herd have been many grand champions. This all the result of the purchase of the sow and two boar pigs that opened Mr. Atwater's eyes to the possibilities of swine breeding in Wisconsin, and especially in La Crosse county. His next buy was a $50 boar at the state fair, at Milwaukee, and it was then that line to his Jersey herd, but with entry into the pure-bred Durocs, he gradually began disposing of his other sows and boars.

Once into the pure-bred game, Mr. Atwater decided to go into it on the right basis. He is a breeder who believes that a fellow must go ahead, or go backward; there is no standing still. So he looked over the farm papers and picked out the good breeders and went to Iowa, where, at four sales, he bought four sows, which gave him twelve sows as a foundation for his herd. It was while in Iowa on this purchasing trip that he booked his first sow sale, and when the Iowa breeders asked if he was sure he would have the stock to sell, he replied, "Why, sure, I'll raise them." And raise them he did, and his first sale went off successfully, and each year since then he has held one with his first at a good price." Then he went to the Minnesota State Fair, and at the first showing he had the grand champion sow, and after that nothing was too big for Mr. Atwater to undertake. In looking over the work of eight years, he is in position to advise beginners, and his advice is to always start with the best. Never let price be a consideration. Never be easily satisfied. Too many of our breeders fail in this. Never think the herd is now good enough; it must go ahead or drop back. By all means advertise. Mr. Atwater says he lost just a year because he didn't advertise heavily enough; "afraid to spend my money," as he expressed it. The first year that Mr. Atwater had nothing but Durocs, he kept a close account of those finished for market. He had 147 spring pigs that averaged 130 pounds when he first began fitting for the block. On warm slop and corn, these pigs gained an average of two pounds a day; during one week they averaged two and one-third pounds daily, and when they went to the Chicago market at an average of 284 pounds, one carload topped the Chicago market, 15 cents, on a market with 47,000 receipts. The last week the gain fell to one and one-third pounds daily,

but he found the hogs took less feed, so that the corn was worth 97 cents a bushel after they reached 200 pounds and only 83 cents prior to topping the scales at 200 pounds. When the daily gain begins to fall, and they eat lightly, he believes the marketing time has arrived.

Mr. Atwater has lived on this farm for twenty-nine years, fourteen years as a renter and fifteen years as an owner. He has two hundred acres, and his fifty acres of corn this year was the finest he has ever raised. Dairying for the first twenty years was his mainstay, but as he has found greater profits and less work with hogs, he has not given his Jersey herd the same close attention of recent years. He has always used a pure-bred sire and bought nothing but tried sires, which accounts for the good grade cows he now has, his cream check from sixteen cows one year amounting to $1,780. Starting as a renter, after he had spent his younger years on his father's farm and in the lumber camps, he has built up this farm until it is one of the best in the county, and equipped with every convenience that goes for comfort.

Mr. Atwater believes that the Wisconsin swine breeder should strive for two types—one for the dairyman and one for the corn-belt feeder. Of course, all strive for the big types (there are always plenty of the small ones) but the dairyman, Mr. Atwater believes, prefers the medium type, with skim milk, oats and middlings, will make as big a hog as the rangy fellow, that the feeder desires to give only corn and water. Mr. Atwater, in all his experience, never fed any oil meal or tankage—sticking to corn, oats, barley, white middlings, skim milk and buttermilk. He has been using a self-feeder the past year for his pigs and has found it satisfactory. He mixes in the feeder white middlings and powdered oats for suckling pigs, and has found that, with the feeder, they do not show the tendency to overload.

Mr. Atwater has had splendid success with his sows. Probably it is because he lives with them at farrowing time, and stays with the young until they are past the critical stages. Last year his twenty-seven sows averaged eight and one-third pigs, and he likes the sow which farrows about eight or nine pigs, as his experience has been that they are stronger and healthier at birth than those from prolific sows are at a week old. Pig losses, he has found, come mostly at night, and he believes it will pay any breeder, during farrowing season, to employ a night man. That has been Mr. Atwater's method, and it has paid.

Mr. Atwater's buildings are all especially adapted to successful swine production. They are comfortable and numerous, and during the past summer he equipped all his feeding yards with concrete feeding floors, something no swine man will do without once he has them. Water is conveniently piped to every trough; his feed heaters are well located and everything is so arranged as to make the work easy and efficient.

There are other interesting things about the Atwater farm aside from his swine breeding. There is the electric-lighting plant that supplies all the buildings; the house and the laundry. Mrs. Atwater irons with electricity; has the little table conveniences, such as toasters, etc.; her washer is run by electricity, all supplied by the plant located in the dairy house. The batteries are charged by the pump that runs the separator and pumps water into a tank that supplies the residence and the farm buildings. Every convenience to be found in a city home is to be found in the Atwater residence. The lighting plant cost about $750, and the maintenance cost is practically nothing. "I couldn't live without it," Mr. Atwater says.

The pure-bred breeder who holds sales will be interested in the sales pavilion. It is a necessity on every farm holding sales, and Mr. Atwater figures that the original cost of $350 was paid the first year. His sale fell on a bad, cold day, and without a heated pavilion he knew he would not have had the record crowd he did have. It is 30x30 feet, with a 10x10 sale ring. Around the sides are five tiers of seats with accommodations for about 350 buyers.

[illegible]er is doing some reconstruction work this winter in providing his hog house with individual runs for the sows and their litters, and also plans an addition to take care of his increasing herd. He never rings his pigs, prefering to let them root, and is a believer in generous feeding, but considers this a problem for individual study.

A WIDER AND MORE EVEN SPREAD

Flying Dutchman Wide-Spread Spreader makes a load of valuable manure go farther, produce better crop results—saves time and labor.

Double Beater Handles Manure Twice

Pulverizes it thoroughly. Second beater running at high speed makes a wide even spread—covers the field in less time.

Law Questions.

Hired Man Quits—Wages.

A Subscriber, Avoca, Minn.—A hired a man to work for him on his farm during the season of 1916 until corn husking time. The man worked only six weeks, and for a certain reason quit on the first day of May. A refuses to pay him his wages until the end of the season. Has A a right to do this?

Answer.—The hired man is entitled to be paid for the actual value of his work, deducting therefrom any damage which the farmer suffered on account of the hired man quitting before the time agreed upon. The farmer should pay the man what is right now.

Sale of Diseased Sheep—Damages.

A Subscriber, Rock Elm, Wis.—In February, 1916, I bought a flock of sixty-four sheep from a man who lives thirty miles from here and paid cash for them. He guaranteed the sheep to be free from disease of any kind, and I brought them home. About two weeks afterwards they began to die, and I called a veterinary who examined them and he pronounced the disease "liver rot, or flute worm" and said that it was contracted in the summer time and would prove fatal in winter. The veterinary gave me some medicine to use, but it did no good, and the sheep continued to die until grass started in the spring. I lost about thirty sheep. Can I recover damages from the seller and if so how much?

Answer.—You can sue the seller of the sheep for damages and if you can prove on the trial of the case that the sheep were diseased when you bought them you will get judgment against the seller for the value of the sheep you lost, estimated on the basis of the market price of so many sound sheep.

Pull 100 Stumps A Day—With The Hercules

FAMILY CIRCLE TALKS
BY THE PUBLISHER

MERRY CHRISTMAS, ONE AND ALL!

I WANT to take this opportunity to wish you, one and all—my many good friends, who have borne with me so patiently throughout the year now coming to a close—A Merry Christmas!

You and I have become better acquainted since last Christmas. Today I feel as though I knew you all; each and every one of you; man, woman and child. I cannot say just how this feeling of personal acquaintanceship came into existence. I have not looked upon the faces of many of you. I have not had the pleasure of opening your door and eating a meal or spending the night with many of you. Yet, I have come to feel as though I knew you, intimately, all the little peculiarities of your nature and character, what you like and dislike, what you think, and so on and on. Perhaps it is because, when I sit down to write this page of my views, I always stop before I write a word and look over at you (figuratively speaking) where you sit in your easy chair, waiting for me to begin. I think of what effect my words will have upon your mind; will they uplift and inspire?—if so, then they will be good words, and I shall be glad I spoke them. Even before I have commenced to write, I like to think of what your answer would be, if you could speak to me by word of mouth, as so many of you speak (to my great delight) by frequent letters. I feel as though I were gathering my own little family about me, as the shades of night begin to fall, and talking to them of the things which have come up in business and in our family life since last we gathered together. I believe that is how and why I have come to think of all my hundreds of thousands of weekly readers as being intimate personal friends, whose faces I know, although I never saw them.

Knowing you then as I do, it has seemed to me that we talked more intimately on more personal subjects during the past year than ever before: Our mutual hatred of war, our love of our native land, our desire to keep the boys and the girls on the farm with us, our sorrows, our successes—a host of things very near and very dear to all of us. Last Christmas I sent you a holiday greeting, but, hearty and sincere as I meant it to be, it did not carry the burden of friendship and affection which this year's greeting carries. We have been tempered by prosperity and adversity both this past year. We have been granted material blessings far beyond our just desserts; yet, at the same time, we have had our prosperity and our peace darkened by the thought of the awful, the useless, the barbaric slaughter across the seas, of loved ones falling in field and trench, of world-cousins giving up their lifeblood so nobly and yet so needlessly. We cannot discuss these things without being drawn still closer together. That is one reason why my holiday greeting, cheery as I want and intend it shall be, sounds rather solemn this time: A Merry Christmas, and millions of human beings, fighting and dying on blood-stained battlefields; how can it be "Merry," even to us in the midst of our peace, happiness and prosperity?

As I write these words, a newspaper was placed upon my desk. It announces that four of the dozen of warring nations of Europe have joined hands to ask for peace. I pray God it is true. Would it not be a Merry Christmas, indeed, if peace were to be restored?—if all the world were to go forth on Christmas morning, at the sound of the church bells, to kneel together at the feet of Him who was the Prince of Peace? What greater Christmas gift could the Old World (and the New, too) know than a peace which would take the men out of the trenches and keep them out? Would it not be Christmas, indeed, in millions of homes in Europe, if father and husband should be able to come home from the war, throw off his gun and pack, and clasp his loved ones to his embrace? Put yourself in his place—you home-loving, family-loving reader sitting at your ease, planning for a Merry Christmas. Does not your heart ache for him?

My friends, I am too full of this subject to write any more; let us ponder it together, in silence. We who give presents on Christmas morn to our loved ones, what greater gift could we give the world than a united public sentiment against war? Shall we stop with hanging baubles and gewgaws upon our own little Christmas trees and fail to hold high a lantern of hope to cheer the men in the trenches, a hope that the day shall soon dawn when war shall disappear from our midst, from all the world, never to be known again so long as time lasts?

I wish you, one and all, a Merry Christmas. You deserve it. May your presents be to your liking and may all of your loved ones come to you, their faces bright and shining, to say that Christmas was never happier, sweeter or more like Christ's birthday than this one. I wish this for you, with all my heart:

The crops may fail, and leave us with our plans all gone ter smash,
The mortgage may hang heavy, and the bills use up the cash,
But whenever comes the season, jest so long's we've got a dime,
There'll be something in that stockin'—won't there, Mary?—every time.
And if, in among our sunshine, there's a shower or two of rain,
Why we'll face it bravely smilin', and we'll try to not complain,
Long as Christmas comes and finds us here together, me and you,
With the little feller's stockin' hanging up beside the flue.

THE VALUE OF GOOD READING MATTER.

I AM delighted to see that our rural schools are co-operating with our traveling library commissions, women's clubs and other interested organizations, to provide better reading matter for our young folks. This is something which should have been done long ago.

Just how much damage is done to the young mind by reading the trash which is printed in book form and in magazines and newspapers, it would be difficult to say. One thing is certain: The danger to the juvenile mind was not ended when "Deadwood Dick," "Nick Carter," "Jesse James," and the other dime novels of crime and outlawry ceased to be generally circulated. There is many a pernicious story circulating today in high-priced binding and in national magazines which does the young mind fully as much injury as did those thrillers of a few decades ago. Perhaps they do even more damage, in the aggregate, for parents knew that dime novels were bad and could issue strict orders against them, whereas today there is little or no way of telling just what reading matter is safe to put into the hands of our young folks.

It is because of this condition of affairs that I believe the movement to have a Good Book Week once a year is a good thing. The idea originated, I am told, with the Boy Scouts and quickly spread to the libraries and public schools. Perhaps the danger is not so great to the country boy as to the city boy, for the farm child has no public library to patronize as has the city child (except so far as the traveling library caters to his wants) and there is less general, desultory reading in the country than in the city. But it is a good thing to stop once a year and call parents' attention to the great importance of giving their children only the very best in the reading line.

I am not going to set myself up as a mentor or censor and make out an arbitrary list of books and magazines, saying you shall read only these and none others. There is great difference of opinion on this subject. Personally, I am a great admirer of Mark Twain. His stories of Tom Sawyer are masterpieces, yet some libraries frown upon them, because of the pranks played by Tom and his boon companion, Huckleberry Finn. We all have different opinions on what is harmful and what is not. I sincerely hope, however, that before any of my adult readers let any book or magazine come into the hands of their children, they will look it over and see for themselves if there is anything degrading in it, or anything which might lessen their children's faith in the Divine Creator, in the goodness of the world in general and in the ultimate triumph of virtue no matter how often imperiled. If I can be of any service to you in this respect, call upon me. If there is any doubt in your mind as to whether a book or magazine or paper is the proper reading for your young folks and you will write and ask me, I will give you my own opinion and I will ask experts along this line and let you know what they say.

OUR EVER-PRESENT FIRE DANGER.

AT THIS season of the year it may not be amiss for me to sound a little fire warning, for the danger is an ever-present one. I do not know any more terrifying emotion than to be wakened, in the middle of the night, by the cry of "Fire," or to see the flames leaping from one's home or place of business. Fire seems so relentless, so cruel, so persistent, that anything we can do to prevent its ravages should certainly be done.

Let me urge upon all of you that you be particularly careful this winter. The main causes of fire on the farm, so the authorities advise me, are open lanterns, left on the floor of barn or outbuilding where they are likely to be overturned, kerosene lamps left in proximity to curtains or other inflammable articles, and overheated stoves and furnaces. All of these dangers come from carelessness. If we must use lanterns in the barn instead of electric lights, why do we not take every precaution against accident; why do we persist in leaving them standing about on the floor, or perched precariously on manger or feed box, in close proximity to hay and other inflammable matter, with thousands of dollars' worth of property at stake? Will we not all see to it that when we use a lantern in the barn hereafter, we hang it firmly on a hook or a nail, out of reach of any draft, where there is no danger? We can see equally well and we minimize the danger of fire to the vanishing point.

I have talked to you several times of late about the advisability of installing artificial-lighting systems, to take the place of the old-time coal-oil lamp, and I know many of my readers are doing this. Now, that the storage battery has been perfected, and it is possible for almost any prosperous farmer to have electric lights in his home and outbuildings (the current being generated while the cream separator or the feed grinder is running) the danger of lace curtains blowing against the lamp chimney, catching fire and spreading the flames to the entire farmhouse, is growing less day by day. But we have not all reached the stage of prosperity, where we think we can afford the electric lights, while some of us, being able to afford them, have omitted installing them. Shall we not see to it that our lamps are placed in the middle of a solid table, where the children cannot pull them over, and far from curtain and other fluttering things which might easily catch on fire?

Stoves and furnaces are an always-present danger, in below-zero weather, if we are not careful. Flues and chimneys should be cleaned out frequently, and it is none too safe to burn them out, as so many farmers are in the habit of doing, especially if the roof is dry. Some of these cold mornings it is very easy to build up too large a fire, in the hope of getting the house heated quickly, before the wife and little ones arise, but it is never safe to go far away and leave stove or furnace untended while the draft is open. I have known of too many farmhouses being burned down as a result of drafts being left wide open while the fire-builder went about other early-morning chores. Let us be more careful on this point than ever before, now that winter is fairly upon us.

There is always an extra danger of fire about Christmas time, when many of our farmhouses contain Christmas trees, with lighted candles upon them, and many of us dress up as Santa Claus, to please the youngsters. The cotton which we use in our Santa Claus "make-up" catches fire rapidly, as do also the dry needles of the Christmas tree, and that which was intended for a scene of jollity may easily and quickly become a scene of danger and mourning. The fire marshal of one of our grain-belt states has issued some timely "holiday thoughts on fire prevention," and I am going to quote some of them for your guidance:

Fire may turn your Merry Christmas into a sad one. "A house of merriment is better than a house of mourning."

Instill the maxim of "Safety First" in the minds of each member of your family.

Put out the blaze quickly if it occurs; so keep your fire extinguishers in good condition, and water near at hand.

Risk no lives. Tell Santa Claus to use discretion in the matter of combining long cotton whiskers, inflammable garments and burning candles.

Every bit of inflammable decoration should be discarded. Use asbestos or mineral wool in place of cotton for snow, and tinsel in place of tissue-paper garlands and bells.

Extra care should attend the Christmas tree and its decorations. See that it stands securely, that the candles are properly protected and that children are not allowed to light them.

Never hang decorations near open gas jets, nor near lights of any kind.

Take time from your festivities to keep an eye on the stove or furnace.

Will you pledge yourself to be unusually careful this holiday season and the entire winter? Fire is too dangerous, too devastating, too cruelly costly, for any chances to be taken. "Safety first" always; remember that, please.

In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

Renew Now and Avoid Delay.

Those readers of The Wisconsin Farmer whose subscriptions expire within the next few weeks should lose no time in sending in their renewals, so as not to miss a single issue of the paper. We offer this as a friendly suggestion to all those who welcome the weekly visits of The Wisconsin Farmer and who would be loath, indeed, to let a week go by without reading our many departments, editorials and miscellaneous features.

When the subscription season is at its height (as it will be now in a few weeks) the letters pour in upon us in such large quantities that, notwithstanding every effort of an increased force of clerks, it is next to impossible to make the alterations and the extensions on the mailing list so as to insure every renewing subscriber receiving every copy, without missing a single issue, and every new subscriber receiving his paper the week the remittance is sent in. But if those whose subscriptions expire shortly, and those who are planning to subscribe for the first time, will take our suggestion and send in their remittance at once, we can insure such service as will give them every issue just at a time of the year when the papers are better and more entertaining than ever.

This promises to be an unusually busy winter in agricultural affairs. Congress is in session and matters of weighty moment to the farmer are to come up for discussion. Our own state legislatures will be in session and The Wisconsin Farmer will report all matters which materially affect the welfare of the farmers of Wisconsin, as they come up for public discussion and legislative passage. We firmly believe that no one of our present subscription family of 90,000 members can afford to miss a single issue of The Wisconsin Farmer and to this end we urge a prompt renewal, now, while there is plenty of time for our circulation force to handle the matter. But this is not all; let every reader of The Wisconsin Farmer make himself a committee of one to get at least one new subscriber, so that the good things he enjoys in this paper may be shared by others. We will do our share by making The Wisconsin Farmer better this winter, and throughout the coming year, than it has ever been before. Will you do yours, by renewing promptly and by asking your neighbors and friends to subscribe and send in their subscriptions, wherever possible?

Wisconsin Community Institute Work.

Almost 1,000 farmers were gathered together recently at a dinner given in the armory at Fond du Lac under the auspices of the Fond du Lac Association of Commerce. This dinner was the culmination of the community institute, mention of which has been previously made in these columns. The purpose of this institute was to bring into closer relationship the progressive forces of the town and country, and we wish to congratulate the people of Fond du Lac county on the result.

There is some difference between a community institute and a farmers' institute. The farmers' institute takes up only practical farm topics, but a community institute has a little wider significance. At a farmers' institute one hopes to get some ideas which will help him in his farm work. At a community institute the thought is more generally directed toward the public or community welfare. There has been considerable work done in the cities and towns through clubs and organizations which look to social and civic improvement. There has also been considerable done in the country through various organizations of farmers. The community spirit is broad enough to include both town and country and to emphasize topics which are of equal importance to both these divisions.

The Wisconsin Farmer is pleased to commend the spirit which has been manifested in Fond du Lac county. We hope it will not be said: "This community work is being done for the benefit of the farmer." As a matter of fact, the city and citizens of Fond du Lac will get the greatest benefit. In a city of 18,000 or 20,000 like Fond du Lac we doubt if there are 10 per cent of the people who really understand what a wonderful farming community immediately surrounds them. To rush out into the fresh air of the open country for an hour's sight seeing or joy riding is by no means getting acquainted with the farmer. Usually the best glimpse that town people get of country people is at the county fair, and we are glad to see that all interests in Fond du Lac county are getting behind the fair. We believe that the country people, as a rule, understand the city people and city business methods much better than city people understand country people. As a general rule, the farmer is a great deal better business man and all the members of the farm circle are more intelligent and prosperous than the average town person gives them credit for.

We doubt if the average citizen of Fond du Lac knows that in 1915 the county produced 561,000 bushels of corn for grain and 290,790 tons of corn for silage; 4,516,716 bushels of oats, being an average of sixty-two bushels to the acre; 1,349,228 bushels of barley, an average of forty-one bushels to the acre; 58,044 bushels of rye; 407,619 bushels of potatoes, an average of ninety-three bushels to the acre; 1,209 bushels of beans; 2,880 crates of strawberries, a yield of 180 crates per acre; 157,958 tons of hay, a yield of 2.1 tons to the acre; has nearly 19.000 horses, aggregating in value $1,750,000; has almost 80,000 cattle, worth more than $3,000,000; has over 17,000 sheep and over 62,000 hogs. According to the last available census report, the average farm in Fond du Lac county is worth $10,452. There are about 4,250 of these farms, making an aggregate wealth of about 45,000,000.

It is worth while for any city to get acquainted with the country people around the county. There are not many farmers whose names you need to be ashamed to have on your visiting list.

Wisconsin Grange Opposes Embargo.

The State Grange of Wisconsin recently held a meeting at Tomahawk. There were 125 delegates present—a large number of whom were from the Upper Wisconsin counties. The Grange took notice of the discussion which is being carried on in the city press, relative to an embargo on foodstuffs, and declared emphatically against such an embargo. The Wisconsin Farmer has been furnished a copy of the resolutions, which are as follows:

Whereas: There is active agitation at this time to have congress place an embargo on farm products to reduce the high cost of living, and

Whereas: The cost of manufactured articles the farmer has to buy has increased in price at a higher percentage than has farm products, therefore, be it

Resolved: That the state grange of Wisconsin believes that an embargo of any kind is not a solution of the high cost of living. Be it further

Resolved: That we utterly oppose any embargo that makes farm products the sole object of action, and if such action is taken we must insist that all manufactured articles be included in such embargo. Be it further

Resolved: That a copy of these resolutions be forwarded to each senator and representative from the state of Wisconsin.

GEO. H. DAWES.
Secretary State Grange of Wisconsin,
Tomahawk Lake, Wis.

The Wisconsin Grange has not a very large membership, but it has enrolled a goodly number of representative farmers, especially in the upper counties of the state.

On their way to the Tomahawk Convention the delegates paid a visit to the co-operative packing plant at Wausau. The Grange has accepted the invitation to send a delegate to the meeting of the American Federation of Organized Producers and Consumers, to be held soon in Chicago.

Tuberculosis and Cattle Sales in Wisconsin.

The need of keeping Wisconsin dairy herds free of tuberculosis is readily apparent on examination of statistics, showing the extent of interstate shipments from this state. As all cattle shipped out must be tuberculin tested, it is possible to secure exact statistics on this point, and from figures compiled by C. P. Norgord, commissioner of agriculture, it is noted that, in the year ending June 30, 1916, a total of 28,232 cattle crossed the boundaries of Wisconsin for other states. Of this number Illinois took by far the most—11,659; Kansas was second with 3,181, Iowa third with 2,265, Minnesota fourth with 2,037, and South Dakota fifth with 1,273. Every state in the Union came to Wisconsin last year for dairy cattle. Most of these shipments, except to Illinois, were probably pure breds and good grades for building up other herds. Illinois, especially that section in the Chicago milk district, always buys heavily of old cows for milking purposes, and when they have served this purpose they are sent to the shambles.

This large interstate trade indicates that the entire country is looking to Wisconsin for foundation stock. If the business is to continue and prosper, Wisconsin must establish a reputation for clean herds. This, however, is not the only reason for clean herds, as healthy animals should be the ambition of every farmer as a protection for his own health, that of his family and his fellow man. There is also the question of cleaning up the herds in the older sections of the state, that this disease may never get a start in the newer sections. There are no statistics showing the exchange of cattle within the state, but thousands of animals are going into the newer communities each year—communities where the percentage of reactors at this time is very small.

Within the past year there were 28,309 tests made in the southern section with 2,443, or 8.6 per cent, reactors; 8,271 tests in the central section with 382, or 4.6 per cent, reactors, and 3,445 tests in the northern section with 85, or 2.4 per cent, reactors. These figures show that the newer sections are much freer from the disease than the older sections.

In interstate trade the state accredited list which was begun last winter promises to fill a long-felt want. It is a list eligible to farmers who have their herds tested by assistant state veterinarians, and this plan has just been approved by the National Live Stock Sanitary Board in its recommendation that the Wisconsin plan be made use of by other states. This board also favors uniform laws to assist in compiling these lists. Advantages of this accredited list in Wisconsin may be summarized as follows:

It is an effective means for keeping clean the new and developing dairy region of northern Wisconsin. There are now in Wisconsin 432 clean accredited herds, tested yearly, and a list of these herds is available to northern purchasers.

It is easily apparent that it is of great advantage for owners of herds to get on the accredited list.

Herds may be placed on the accredited herd lists through inspections by inspectors of the department of agriculture. Herds on this list can be shipped to other states without further testing.

With other states taking up this plan of accredited lists, it will provide for the buyer of cattle an assurance that the stuff he buys is free from tuberculosis and enable the seller to ship without further testing and build up a reputation for a clean herd. This is the selling side of the proposition—the question of personal health should not be overlooked.

Wisconsin Dairymen's Resolutions.

Probably a more constructive set of resolutions was never endorsed by the Wisconsin Dairymen's Association than those adopted at the recent meeting of the organization at Waupaca. They are important to the dairy interests in that they call attention of dairymen to the big things which confront that industry today and we quote them as follows:

Resolved, That we favor the enactment and enforcement of just and effective laws and regulations for the shipment of cattle in interstate commerce.

Resolved, That we favor a national law providing for the like kind of assistance in controlling the spread of tuberculosis as is now extended by the national government in the case of foot-and-mouth disease, with provision made for the reasonable compensation of the owners of slaughtered cattle.

Resolved, That we favor the reenactment of the state law requiring that the tuberculin test shall be applied to all cattle offered for sale as breeding stock or milk animals.

Resolved, That we earnestly recommend to the members of the state legislature that the annual appropriation to the Wisconsin Dairymen's Association be fixed at not less than $6,000 in order that it may meet the increasing demands upon it for efficient work in the supervision of cow-testing associations. We make this recommendation because it is our opinion, that the cow-testing associations present one of the greatest movements for the advancement of dairy farming that is in existence today.

Resolved, That we approve the oleomargarine law proposed by the National Dairy Union and that we commend to dairymen everywhere, the active and intelligent support of this measure, and that we urge upon our representatives in congress to work for the early passage of this law as a measure of great importance alike to the dairy industry of the state and to all consumers of dairy products.

Resolved, That we favor the adoption of reasonable national standards for all dairy products, and the enactment of suitable legislation by congress for their effective enforcement.

The association, in these resolutions, has undertaken six big projects—none more important to our mind than the request for an additional appropriation from the legislature to carry on the cow-testing work which is proving so effective at present. The association now receives $4,500 aid from the state. It asks for an increase to not less than $6,000. This would enable the organization to further extend its activities in the weeding out of unprofitable cows and in increasing the production of those already profitable. Through the fifty-five active associations now in operation about 4,000 cows will be weeded out this year.

Wisconsin 1917 Automobile Show.

Our readers will be interested in the Wisconsin Automobile Show which is to be held in the auditorium at Milwaukee, January 5th-11th. Inasmuch as farmers own such a large per cent of automobiles in this state, the show is just as much a farmers' show as it is anybody's. It is expected that the attendance of farmers will be the largest in the history of the automobile shows in this state.

The show itself will exceed former exhibitions. A few years ago this show was easily housed on the main floor of the auditorium. This year it will be necessary to use the stage, Kilbourne, Juneau and Walker halls, the 5th street rotunda, all of the main hall corridors and the north and south rest rooms. For the first time in the history of the show it will be necessary to exhibit pleasure cars in the basement. The normal capacity of the auditorium for pleasure cars is about eighty, but space has been reserved for over 100. The demand for space in all departments has made it necessary to rearrange the entire show.

In order not to displease any of the manufacturers or dealers it was necessary to allot space by drawing and eight distributors cheerfully accepted their lot of basement space.

Mr. Bart J. Ruddle, secretary of the show, has been a busy man for the past two or three weeks dealing with decorators, carpenters, electricians, painters, flower girls and others who are arranging a symphony of green, white and pink embellished with a

flood of light from 5,000 specially arranged nitrogen lamps.

The following pleasure cars will be on exhibition at the show:

King, Regal, Oldsmobile, Monroe, Ross Eight, Haynes, Grant Six, Elgin, Maxwell, Pierce Arrow, Buick, Paige, Chandler, Hudson, Locomobile, Ford, Liberty, Marmon, Studebaker, Cole, Packard, Scripps-Booth, Marion-Handley, Winton, Hupmobile, Stearns-Knight, Franklin, Reo, Crow-Elkhart, Patterson, Pullman-Premier, Detroit Electric, Velie, Cadillac, Jeffery, Dodge, KisselKar, Allen, Oakland, Inter-State, Apperson, Sun, Mitchell, Lexington, Willy's-Knight, Overland, Saxon, McFarlan, Peerless, Auburn, H. A. L. Stephens, Moline-Knight, Briscoe, Pathfinder, Empire, Dort, Chevrolet, Moon.

We feel sure that any of our readers who can take in the automobile show will be well repaid for their time and effort.

Power on Wisconsin Farms.

Under existing conditions the labor problem is one of great magnitude for the farmer. This is especially true on the dairy farms of Wisconsin, where extra help is needed every day in the year. Help is not only getting scarcer, but there is also a demand for better help, and $50 a month with board is no longer an unheard-of wage. Help that was once obtainable for $20 or $30 now demands $30 or $40.

This situation forces the farmer to study more than ever plans to reduce the amount of hired help required and at the same time make farm work more attractive. One way is the general introduction of mechanical power, and it was this subject that Mr. F. M. White, of Madison, discussed in a practical and interesting way at the recent state dairymen's convention at Waupaca. Mr. White cited statistics showing that the average of Wisconsin farms is 118 acres; that four horses are required for the field operations and that the average investment in horse power is from $600 to $1,000 per farm. As the horse eats, whether he is idle or at work, an additional cost of $90 per horse for feed and keep, or $360 per year, must be added to each farm. By these figures the cost of horse labor for producing the dairy farm products, such as corn and the grains, is 26 per cent; the cost of man labor 18.1 per cent, a total of 44.1 per cent charged to horse and man labor. This cost, Mr. White believes, can be cut by using the tractor, which can be made profitable and a labor saver. This can be done by using them for other things besides field operations.

But there are other numerous jobs about the farm where power may be applied to reduce the need of help. Pumping water is one of them, and with the best type pump, it will require one man an hour to pump the 500 gallons used on the average dairy farm daily. At 25 cents an hour, this is a cost of $91.25 a year, when a small gas engine will do the same job for $3.22 a year with gasoline costing 18 cents a gallon. Mechanical power in this one operation would save $83.03 in one year, easily the cost of an engine which should last at least ten years. Some time will be needed to start the engine and care for it. Allowing for this, Mr. White figures the saving in pumping water alone would be at least $39.40 a year on the average farm.

Twenty per cent of Wisconsin farms sell butter and another 25 per cent sell butter fat, so that the engine can be used to operate either the churn or the separator as well as pump water. The saving with the separator will be proportional to the saving in operating a pump, and this small engine has also been found serviceable on the washing machine and the grindstone. Larger engines that can be used for these purposes can also be used to operate corn shellers, feed grinders, silage cutters, grain graders and root cutters. The farm electric lighting plant can also be relied upon for power, and this is an equal saving with the gasoline engine.

Wisconsin Implement Dealers' Convention.

The eleventh annual meeting of the Wisconsin Implement and Vehicle Association was held last week in the new auditorium at Milwaukee with an attendance of almost 1,000 dealers and manufacturers. In connection with the meeting there was here a manufacturers' exhibit which was said to be the largest ever held in the state.

The Wisconsin association is one of the livest state organizations in the implement and vehicle field. Its exhibit is always a treat for the man interested in farm and dairy machinery and it is worth the time and expense of any farmer to attend. The Wisconsin association has always made special efforts to interest the farmers in its meetings and its exhibits and there was a large number of them present this year. Some were guests of dealers. The program overflowed with good things of interest to the trade as well as buyers. The delegates were entertained royally and great credit is due the Milwaukee manufacturers, jobbers and exhibitors in their co-operation with the state officers.

Rising costs in the raw materials which go into the manufacture of all implements focused attention of the convention. As the situation has become more acute during the past year than ever in history it was but natural that the manufacturers, jobbers and dealers should be vitally interested in this question as well as the farmer, who is the man who ultimately must pay the increase. Many speakers, during question box discussions, brought out that, though the price of farm implements and machinery have increased, the increased value of farm products has more than made up the difference. Measured in terms of farm produce, implements are really cheap compared to what they have been in former years. Every farmer can realize that just half as much 80-cent corn is needed to buy a certain product as 40-cent corn. Going back two decades when corn was around 11 to 12 cents it does not seem absurd that a $90 implement in these days of 80-cent corn is cheaper than the same implement in the days of 11 and 12-cent corn, if it were to be paid for in corn.Take the dairyman, for instance, who is now getting from $2.10 to $2.25 for 100 pounds of 3.5 per cent milk. Only a few years ago in many Wisconsin sections he received less than half this amount and certainly the increase in the cost of dairy and farm machinery has not kept pace with the increase in the price received for milk. It is true feeds cost more for the dairyman, but were he to buy his machinery in milk he would find that the situation would be identical to that of the corn grower.

Mr. E. W. McCullough, secretary of the National Implement and Vehicle Dealers' Association, discussed the rise in steel prices. This, he believes, is due largely to the unusual demand and this seems to be borne out by the market reports which show steel beams quoted at $70 a ton and every mill in the country booked with enough orders today to run them through, at full time, until 1918. Railroads are big users of steel and are buying heavily now at present prices so that chances for any reduction in prices are not expected for some time. Even at $70 a ton it is impossible to secure steel beams for delivery under eighteen months and if this condition becomes more acute it is the general opinion implements will go even higher. Peace negotiations will probably not affect the market for some time, it was said.

There was a general interchange of ideas of doing an implement business and what the prospects are for the future. The belief that one way to reduce costs is to arrange for a "settlement upon delivery" basis was renewed. Under this plan a farmer who gives his note shall give one payable at a certain time with interest so that it would be negotiable. The binder twine situation was also discussed and Mr. C. A. Lukins, of Chicago, said that farmers this year paid an unnecessary amount of $15,000,000 for twine over last year because of the alleged sisal fiber monopoly. Mr. F. R. Sebenthall, secretary, predicted that unless the government broke up this monopoly in another year binder twine would advance 100 per cent. This resulted in the association adopting a resolution calling on congress to take some steps to curb the alleged trust.

Mr. Oliver E. Remy, secretary of the Wisconsin State Fair, told the convention of new orders of the board which will prevent all mail order concerns from exhibiting at the fair. Other important speakers were Mr. J. A. Craig, of Janesville; Mr. Thomas Witten, of Trenton, Mo., and Mr. W. D. James, of Ft. Atkinson. The association also adopted resolutions favoring 1-cent letter postage; indorsed the Stevens bill which permits a manufacturer to set the price at which his product may be sold; indorsed the federal reserve law and the cost system of the federal trade commission. Mr. E. J. Williams, of Randolph, was chosen president to succeed Pres. D. W. Allaby, of Mauston. Mr. H. A. Schultz, of Portage, was named vice president and Mr. F. R. Sebenthall, of Eau Claire, who has been secretary-treasurer for many years, was re-elected.

Who Gets the Butter Money?

The natural question of every farmer, when butter on the Elgin board is quoted around 40 cents, is who gets the larger part of the 40 cents? The city consumer probably throws the blame for high prices on the dairyman, never taking into account that butter on its way to the table passes through the hands of a number of middlemen, all of whom must extract their profit. Therefore, the question remains of what per cent of the retail price goes to the farmer.

Mr. B. H. Hibbard and Mr. Asher Hobson, of the college of agriculture, in co-operation with the United States Department of Agriculture, have attempted to answer the question in a bulletin, "The Marketing of Wisconsin Butter," which has just come from the press. Their conclusions show that the farmer receives about two-thirds of the money paid for butter and that this is a larger proportion than is received by him from other dairy products. The retailer is second, receiving more than the manufacturer, but the following table speaks for itself:

	Cents	Per cent
Farmer	23.33	67.7
Hauling	1.50	4.3
Creamery	2.33	6.7
Railway	.80	2.3
Storage	.18	0.5
Shrinkage	.23	0.7
Receiver, jobber, broker	1.75	5.0
Packaging	1.00	2.9
Retailer	3.43	9.9
	34.55	100.0

The entire subject of marketing is discussed at length and some interesting conclusions are given. More Wisconsin creameries are privately owned than co-operatively owned; the average cost of making a pound of butter is estimated at 2.33 cents and a glance at the above table shows the big item of expense of hauling, this item being almost as much as the amount the receiver, jobber and broker receives per pound.

The striking fact concerning butter production in Wisconsin is the high proportion made in factories and the relatively low production on farms. While first in factory production in 1909, the date of the last census, Wisconsin was sixteenth in dairy or farm butter. There has been a steady decrease in farm-made butter each year since 1879, when less than 5,000,000 pounds were made in creameries against 32,000,000 pounds on the farms. In 1909 this had reversed itself with only 28,000,000 pounds on farms and 103,000,000 pounds in the creameries. Two-fifths of the farm butter is now consumed on the farms, and, as Wisconsin farmers sell less than 13 per cent of the total butter output of the state, an interesting point arises as to why the manufacture of butter on the farm continues at all. This table tells the story:

Reason	Number	Per cent
More profitable	63	24.42
Hauling of milk	96	37.20
Dissatisfied with creamery	13	5.04
More and better by-products	43	16.63
No milk market	22	8.54
Make for family — sell surplus	21	8.17
Total	258	100.00

From a close study of these causes it is concluded that the majority of farmers who make butter are forced to do so through circumstances and that very few make butter at home when they have a choice of convenient markets for their milk and cream.

Spraying Is the Watchword.

Wisconsin State Horticultural Society Holds Good Meeting and Has High Quality of Fruit Notwithstanding Poor Fruit Season of 1916.

START the 1917 fruit season with a firm determination to spray thoroughly. This was the big lesson learned at the annual convention of the Wisconsin State Horticultural Society, held at Madison last week. This convention was well attended and the program was well balanced. The fruit show in connection was a good one [illegible] standing poor yields and the short fruit crop in 1916. The growers who sprayed properly were able to exhibit fine apples. The season just passed was the most unusual in twenty years. In the spring rain interfered with

MRS. N. A. RASMUSSEN, WINNEBAGO, PROMINENT WOMAN AT HORTICULTURAL CONVENTION.

spraying and scab and other fungous diseases made unusual headway. Dry and hot weather damaged the fruit later in the season. To a large extent high prices offset small yields, both for tree fruit and small fruit. This was also true of vegetables. In his annual report Secretary Edward Cranefield reviewed the work at the ten trial orchards conducted by the society. Experiments with grapes at

VICTOR FELTER, DES MOINES, IOWA, SPEAKER AT STATE HORTICULTURAL CONVENTION.

Sparta showed that grapes may be profitably grown anywhere in Monroe county. Mr. Cranefield holds that the Gays Mills orchard still ranks as best in the state. The experiments carried on this year prove that a high quality of fruit may be raised even in a poor year if proper spraying methods are used. The orchardist must not forget that if the spray is washed off by rain the night after it is put on, the trees should be sprayed again next day. The following interesting statistics on Wisconsin orchards have been gathered by Mr. A. A. Asbahr, working in connection with Mr. Cranefield on the Wisconsin orchard census:

Of the 386 orchards listed 249 were sprayed and of the total number of spray rigs 121 were operated by hand power and 128 by gasoline.

Of the whole number of Wealthy apple trees listed, 127,423, 36.5 per cent are one to five years, 10 per cent six to ten years, 4.6 per cent eleven to twenty years and 48.0 per cent over twenty years.

Of 14,952 Duchess trees listed 48.4 per cent are one to five years, 17 per cent six to ten years, 22.1 per cent eleven to twenty years and 12.5 per cent over twenty years.

While, as stated above, the work as a whole is incomplete, there is one exception and that is Door county or that portion north of Sturgeon Bay as directions were given to cover this territory fully. From the number of reports turned in, 116, there is good reason to believe that Mr. Asbahr followed instructions faithfully and the figures here given are as nearly accurate as can be obtained.

In this territory there were found 104,553 apple trees and 334,522 cherry trees. Computing 100 trees to the acre, the average in Door county, this gives 4,390.75 acres of orchards, 76 per cent of which are cherry and 34 per cent apple.

Of the cherry 80.9 per cent are one to five years, 18 per cent six to ten years, 11 per cent eleven to twenty years and none over twenty years.

In Bayfield county only the territory immediately adjacent to the cities of Bayfield and Washburn were covered, showing 36,906 apple trees and 33,417 cherry trees.

J. F. Harrison, of Excelsior, Minn., warned beginners with orchards not

A. A. ASBAHR, of Madison, who has been assisting with orchard census.

to have too many varieties. He recommends the home orchard be close to the house, but the commercial orchard be further away. Mr. Harrison pastures eighteen to twenty calves in his orchards. When asked whether calves might not die from eating poison fruit, he said he sprayed his trees four times yearly and he never lost any calves from poisoning. When the apples begin to fall he takes the calves out of the orchards and when the picking is done he turns them back in again. For the farm orchard he recommends trees set twenty feet apart and for the commercial orchard twenty-five feet apart.

Better apples and more honesty in market were recommended by Prof. J. G. Moore, of the Horticultural Department, University of Wisconsin. The discussion brought out the fact that there is a market for small apples as well as for fancy apples, but that a great mistake is made sometimes by trying to pass off small ones for fancies. Mr. Moore advocated a grading and packing law, so that culls will be marked culls on the outside of the barrel or package. He also recommended fruit-clearing associations to aid in marketing their fruit; advocated a law compelling orchard owners to properly care for their orchards. This is advocated on the basis that it is unfair to the grower who sprays his trees to have his neighbor's orchard a place for disease breeding.

The marketing problems were discussed by F. Kern, of Bayfield; insect and pest control was handled by G. H. Townsend, Prof. R. H. Roberts, Prof. H. F. Wilson, Prof. S. B. Fracker and Prof. E. D. Ball, of the state department of agriculture; Prof. L. R. Jones and Prof. G. W. Kiett. Others who spoke on various phases of fruit or flower growing were C. L. Richardson, of Chippewa Falls; Mrs. S. H. Whittlesey, of Cranmoor; C. M. Secker, of Mather; Mrs. N. A. Rasmussen, of Oshkosh; William Toole, Sr., of Baraboo; F. M. Edwards, of Madison; T. J. Turner, of Bayfield; H. G. Scott, of Hebron, Ill.; Charley Hey, of Dixon, Ill.; Robert Blackwood, of Lake Geneva; Nic Zweifel, of Milwaukee; Mrs. C. E. Strong, of West Allis; Robert J. Sampson, of Lake Geneva; and Mrs. John Geiger, of Oshkosh. Five-minute round-table talks added greatly to the interest in the programs.

N. A. Rasmussen, of Oshkosh, was re-elected for another year; D. E. Bingham, of Sturgeon Bay, vice president, and L. G. Kellogg, of Ripon, treasurer. The executive committee is expected to rename Mr. Cranefield as secertary.

The students' essay contest was won this year by C. B. Blosser, of the college of agriculture, with H. W. Albertz second. There was also considerable interest in a pie contest and Mrs. George Johnson, 1424 Morrison street, Madison, won first both on her apple and cranberry pies. Mrs. E. S. Cooper was second in apple and Mrs. T. E. Holly third. Mrs. Joseph Shelton was second in cranberry and Mrs. Ed Larson third, all of Madison.

In the apple show first award on best five plates commercial varieties went to M. F. Foley, Baraboo. Awards for best plate other varieties were as follows: Ben Davis, Theo. Kurtz, Jr.; Fameuse, H. H. Harris; Gano, J. E. Baer; Gem, L. B. Irish; Golden Russet, Theodore Kurtz; Grimes Golden, D. E. Bingham; Jonathan, G. H. Townsend; King, G. H. Townsend; Maiden Blush, N. A. Rasmussen; McIntosh, M. F. Foley; McMahon, H. H. Harris; Newell, J. E. Baer; N. W. Greening, M. F. Foley; Northern Spy, G. H. Townsend; Patten's Greening, L. B. Irish; Pewaukee, A. K. Bassett; Plum Color, N. A. Rasmussen; Salone, M. F. Foley; Seeknofurther, D. E. Bingham; Scott's Winter, J. E. Baer; Tolman's Sweet, J. E. Baer; Utter, A. K. Bassett; Wagner, Richard Gilbert; Wealthy, H. H. Harris; Windsor, D. E. Bingham; Wolf River, H. J. Harris; New York Imperial, N. A. Rasmussen. On peck displays firsts were awarded as follows: Fameuse, H. H. Harris; Gano, J. E. Baer; Golden Russet, Henry Simon; Jonathan, G. H. Townsend; King, G. H. Townsend; McIntosh, M. F. Foley; McMahon, G. A. Freeman; N. W. Greening, M. F. Foley; Tolman's Sweet, Theodore Kurtz; Wealthy, N. A. Rasmussen; Windsor, M. F. Foley; Wolf River, J. E. Baer.

Banquet For Holstein Breeders.

To the Editor:—The first annual meeting and banquet of the Western Wisconsin Holstein-Friesian Breeders' Association was held at the La Crosse County School of Agriculture, Tuesday, December 12th, with an attendance of over sixty.

This association was organized one year ago with an initial membership of nineteen. Since that time it has grown until at the present time there are fifty-eight members. The association has been very active during the year and through its influence about $6,000 worth of stock has been sold out of our community to other states. Twenty-three inquiries for carload lots of Holsteins have come in from thirteen different states.

An attractive design for the association stationery has been worked out and many of the individual members are using this stationery for their own advertising purposes. Definite plans for more advertising have been launched and a more active year even than our first is expected.

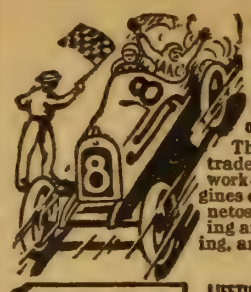
At the banquet Professor Kildee, of the University of Minnesota, was signed to speak, but he was forced to send a substitute. Mr. McQuire, a prominent man in agricultural circles, took Mr. Kildee's place and spoke very interestingly on the value of rural organization and how associations can develop and grow. He laid special stress on the duties of individual members if the association were to be a success.

E. L. Liddle, Sec.
Onalaska, Wisconsin.

A good ration, suggested by J. G. Halpin, to keep in a hopper constantly before the flock is made of three parts of corn and one part of oats, with a dry mash of equal parts of bran, middlings, ground corn and one-half part gluten feed. If milk is not available for mixing the mash add one part of meat scrap to it or put the meat scrap in the hopper and let the hens help themselves. Some form of animal feed, such as green feed and oyster shells, are very essential. Hens cannot make profits for the owner unless they are abundantly fed and secure the necessary elements for economical egg making.

The South St. Paul Angus Sale.

THERE was a good crowd in attendance at the Angus sale made by the Minnesota Aberdeen Angus Breeders' Assn. Buyers were on hand from North Dakota, South Dakota, and Wisconsin, besides the local Minnesota buyers. As a result the sale was very satisfactory. Some of the females could have brought more money, but the cattle were not in the best condition and there were also some cattle that should not go through a sale ring. Several real choice young bulls were sold at very reasonable figures. Those connected with the sale expressed themsedves as being well pleased with the outcome. Twenty-five bulls brought $4285, average $171 thirty females $3865, average $139, fifty-five head $8150, average $148. Col. W. H. Cooper did excellent service on the block.



GOOD MEN WANTED TO LEARN THE AUTO BUSINESS

Any ambitious, capable young man can make a success for himself, and if you will only prepare yourself, you will get work, because positions are open, waiting for competent men to do Auto and Electrical work.

The American Auto College develops your talent for a splendid, big paying trade. Our course has been enlarged with lots of new work—principles of Knight Motors, 8 and 12-cylinder Engines of new models, Tractors, new Starting Systems, Magnetos, Wiring, Coils, Welding, Brazing, Lathe work, Milling and Drill work, Tool making, Overhauling and Repairing, and all the newest, up-to-date Auto equipment.

AUTO College

$900 TO $3,000 SALARY OR BUSINESS PROFITS PER YEAR

Positions Are Open
Tinker repair men are let out as fast as good men are found to take their places. Garage men, letters and telegrams come to me asking for good men. [illegible] prepare yourself and your future and success will be started. Think of the good time, and the money you can make.

LIFETIME OPPORTUNITY—It's up to you to be either a common, hard-working laborer or else learn a good business. Thousands of men will go into the Auto business within the next year. Be one of them. We want you to. Get started right away. Learn here where the opportunities are greatest and best, by our system of actual work in our large shops. No books used; we furnish tools. You do the work yourself. Our men learn easily and quickly because practical work is the best.

Big Electric Starter and Tractor course FREE with the regular Auto course. Write for our big FREE Catalog now

1916 Crops Close to Five-Year Average.

Wisconsin Corn Yield Below Normal, But Exceeded Last Year Considerably—Live Stock in Good Condition.

Barron County.—The corn crop for the whole county was very poor, with no corn in some localities. This was due to the planting of late varieties and the early frost. Farmers who planted northern grown corn had a fairly good yield. A great many planted seed from New York, Iowa, Nebraska, Minnesota and other states and got a poor stand. The average yield for the county was thirty-five to forty bushels per acre. The corn crop is 50 per cent better than last year and about 85 per cent of five-year average. There [illegible] stock on feed than last year, [illegible] high price of feed. There is [illegible] factory. contagious abortion and some hog cholera in the county.—William Bartlett.

Buffalo County.—The corn harvest is completed throughout the county. Those who have silos made good use of such corn as could not mature. The corn that is shredded is fairly good and the fodder is fine. The average yield per acre is about twenty-eight bushels and the total crop will compare favorably with last year's. Cattle and hogs are in good condition and will go into winter quarters in fine shape. There is no contagious disease among either cattle or hogs, but farmers are selling off close for fear of shortage of feed.—James G. Bates.

Burnett County.—The early frost did some damage to the corn in some localities, but the matured corn is about 20 per cent more than the crop of 1915 and about 15 per cent above a five-year average. The live stock is in fine shape and, as many or more than an average number are on feed. Although the buyers are paying big prices, the farmers are in general keeping all they can care for during the winter.—A. G. Peterson.

Chippewa County.—A very good crop of corn has been harvested this year, about one-third to one-half better than last year, as last year was almost a failure. This year's crop is about an average of the last five years. Potatoes were very poor, in some places only one-fifth of a crop. The average was one-third to one-half a crop. Oats and small grain were good, and hay extra good. Prices run about as follows: Oats, 51 cents; potatoes, $1.40 to $1.50; butter, 45 cents; eggs, 40 cents. The cattle are in good condition and are on pasture as no snow has fallen yet. There is no disease among the cattle.—Ernest Nertzel.

Crawford County.—Corn was not what was expected in the early part of the season. Drouth and hot winds cut down the yield, although the quality is fair. The average yield would be close to thirty bushels per acre. The yield and quality are better than last year, owing to the early frost last season, but would not rank much more than half a crop with the two or three years previous to last. Cattle feeding has been cut down some on account of two poor corn crops. The hog crop is somewhat light also. No cases of contagious diseases among the live stock have been reported.—H. H. S.

Door County.—The corn crop this season was very satisfactory. Very little corn in this county is husked, as most of it is put into the silos. About 75 per cent of the crop matured. A corn show was held at the county fair with 1,500 ears entered by the boys' club. The variety was the Wisconsin No. 12, the variety grown mostly here. Not many beef cattle are on feed as most of the farmers are in the dairy business.—L. E. Burmingham.

Green Lake County.—Small grains averaged about two-thirds of a crop. Corn is better than last year, about equals the average of the last five years. Less cattle are being wintered than last year and hogs have been marketed somewhat earlier than usual on account of the high price of feeds.—G. B. W.

Iowa County.—Corn is a fair crop. The northern half of the county surpassed the southern both in yield and hardness. The silage of this year's crop is fine. As a whole this year's crop will average above 50 per cent more than 1915, but not as good as 1914, and a little below the last five-year average. Live stock is in fine shape and the county is absolutely free from disease of any contagious form. There are more cattle on feed than usual at this time of the year, especially milk cows, due to the price of milk.—Art G. Hoskins.

Iron County.—Practically all the corn raised in this county is cut in silos or fed as dry fodder, as only a small per cent matures to ear corn. The acreage of corn planted is somewhat on the increase. Live stock is in fine condition. There are very few cattle on feed for beef in this locality. A larger number than usual of yearlings and cows are disposed to local butchers. Potatoes yielded about three-fourths of a crop and are worth $1.60 a bushel.—J. A. Becker.

Jackson County.—The average corn yield per acre is estimated at about forty bushels, exceeding the 1915 crop, which was almost a failure in this county except for silage. This year's crop was about an average of the last five years. Few cattle are being fed. No contagious diseases have been reported.—C. S. Ristow.

La Crosse County.—Crops as a whole have yielded below the average. Rye and oats produced about the usual amounts, while wheat and barley were about three-fourths crops. Corn was about an 80 per cent crop and some of this was not matured owing to unfavorable weather conditions. Live stock, though less in number than usual is in thrifty condition.—S. J. D.

La Fayette County.—Many farmers were disappointed in their corn crops, as the yield was not as great as was expected before husking. The average yield for the county is estimated at about forty bushels per acre of good, well-matured corn, which is about 50 per cent better than 1915. About the same number of cattle are on feed as in previous years, possibly a few more. Cows are being kept on account of the unusually high price of milk and of the favorable prospects for high prices next year. There is no contagious disease among the stock.—W. F. Pease.

Lincoln County.—Not much corn is raised in Lincoln county, as frost comes too early to ripen corn. What corn is raised is used for silage. Farmers here are trying to get more cows and some are beginning to weed out the boarders and replace with better ones. There are about 10 per cent more than last year. There is no disease among the cattle.—G. A. Patterson.

Oconto County.—The corn crop was unusually light and poor in quality, with the exception of a few fields that ripened well. About the same number of cattle as in other years are on feed in this locality. A large number of young horses are for sale. Prices for farm produce are good: Hay, $12 a ton; potatoes, $1.25 to $1.50; butter 46 cents; eggs, 45 cents; chese, 26 cents; beans, $6.50; peas, $4; straw, $6.—William J. Hinker.

Outagamie County.—The corn crop throughout the county was about 60 per cent of normal, being quite a little below the average crop of the past five years. Potatoes also average far below any former year. Winter grains are looking very good at this time of the year. Not as many cattle as usual are on feed on account of corn and other feeds being very high. There are no diseases among the live stock. There is a splendid crop of young pigs. Clover seed is being hulled and is of very good quality.—Harry Leppla.

Richland County.—The corn crop was about two-thirds of a normal yield and the quality was poor. It is below the average for the last five years. About the usual number of cattle are being kept. Farmers with stalk fields do not have to feed their cattle yet, but most of the farmers are feeding silage to milk cows.—E. C. Stewart.

Rusk County.—The corn crop in the southwestern part of the county near the lakes was exceptionally good and fully matured. In some parts of the county the frost did considerable damage to the corn. An average yield would be about seventy-five bushels to the acre. The corn yield in the county was considerably better than last year, but hardly up to the average for the last five years. Live stock, especially cattle appear to be in a fair, thriving condition and exceptionally free from any disease. Cattle have been sold off more closely this fall than in previous years and there will not be as many fed as formerly.—T. M. Thomas.

Marquette County.—Corn will average about twenty-five bushels per acre this year. It is much better quality than last year and will average with the last five years. Potatoes are not a fourth of a crop. They will not average twenty-five bushels to the acre. Beans are also a very poor crop, averaging about five bushels per acre. Small grain was good. More acres than usual are being sown to rye. All live stock is in good health, but some are thin in flesh. Only about 50 per cent of the steers are being fattened on acount of the price of feed.—J. M. Williams.

Polk County.—Corn has been a fair crop, much ahead of 1915, but hardly up to the average for the last five years. In some cases the yield has been up to sixty bushels per acre, but these are rare. The average would be much below that figure. Owing to the high cost of feeds most of the best stock went to market direct from pastures. Top steers are selling around a nickel. Hogs are about $7.50. Dairy stock is in good condition. Butter on local market is selling for 44 cents per pound.—Wallace Fountain.

Portage County.—Most of the corn raised here was put in silos, the average yield of silage being about eight tons per acre, with about twenty-five bushels of corn in it. Part of the crop froze before it was fully mature. The potato crop yield was light, but the quality was fair and the acreage large, so we still have on hand a good supply. The grain crop was small, but hay was very good. Live stock in general is in very good condition with no sign of infectious disease. About 10 per cent more dairy cattle are kept than ever before. In spite of the extremely high prices of feed they are being fed well and produce well as shown by the testing associations and creameries. The year has been about average, as the short crops were well made up by the better ones.—Arthur H. Peterson.

Sauk County.—The corn crop was immeasurably superior to the 1915 crop, at least in quality. The yield per acre [illegible] ranging from fifteen to seventy-five bushels per acre. As far as can be seen in this vicinity the yield per acre fell below the average for the last five years.—R. F. Klemm.

Washburn County.—Fall work is finished. The corn crop is as good as the average for the past five years and 50 per cent better than the 1915 crop. Cattle are healthy and in fine condition. Stock buyers are active. About the usual number of stock cattle are being carried over winter. There is some increase in the number of cows being kept. Some hay is being shipped out.—L. D. Gainhart.

Washington County.—On the whole the corn crop this fall was better than it was in 1915. The corn was far more matured this season than a year ago, but the largest part of the fodder was frosted throughout the county before harvesting. The average for the county may go as high as sixty bushels per acre. The number of acres in corn this fall would not run much, if any, ahead of former years. The number of live stock in this locality has increased during the last year, and in fact during the last five years. Contagious abortion is the only disease causing loss among cattle in this locality. Many farmers will be short of feed by spring.—Milo P. Salter.

Waukesha County.—Corn is a silage crop in this part of the county, very

(Concluded on page 18.)

COMPARE FOR YOURSELF! HERE ARE THE FACTS!

"You are the judge or jury. Here are the facts." —Wm. Galloway.

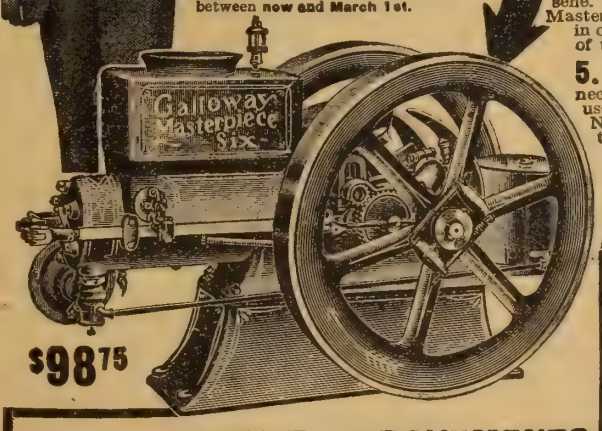
For years and years I have told you to compare the Galloway engine with any other engine! That's what my customers have done and that's why the annual sales of Galloway engines run up into the **thousands** upon **thousands!** I have told you to **compare the design** of the Galloway Masterpiece Engine, the **material, the workmanship** and its **finish** and the

SIX 1917 SELLING PLANS --CASH OR TIME

on which I sell them with **any engine made,** whether it costs more or less. If you pay less for an engine than for a Galloway Masterpiece you could **not possibly** be getting as good an engine. If you pay more it would only be **paying too much.** No matter what size or style engine you want **I build them** here in Waterloo in my own great chain of factories to **fill every want.** My 1¾, 2¼, 4 h. p. and other sizes are just **as scientifically designed, built, machined** and **finished** as my mogul engines from 12 to 16 h.p.

$25,000 Legal Bank Bond ABSOLUTELY PROTECTS

every one of my customers and proves my willingness to have **every claim** and statement I make **fully investigated.** I want you to **try** a Galloway engine on your farm—in your own shop! That's why I prepared my new 1917 special proposition. I want a Galloway Masterpiece 1917 model gas, kerosene or distillate engine in **every township** between **now and March 1st.**

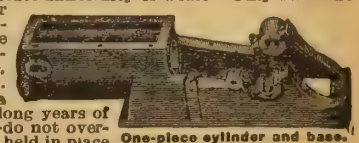


$98.75

GALLOWAY'S ENGINE TALK NO. 1

These monthly engine talks are to show you **why you should not buy an engine of any make** or kind until you have thoroughly investigated my new 1917 model Galloway Masterpiece engines—portable and stationary—from 1 3-4 h. p. to 16 h. p.

1. Cylinder and base of all Galloway engines from 4 to 16 h. p. cast in one piece. Cylinder, piston, connecting rod, crank shaft and flywheels always in perfect alignment. Absolute uniformity of wear. Only scientific successful method of construction for large, heavy duty, heavy weight engines. Two-piece cylinder and frame castings cannot be kept in line. Galloway engine cylinders will not score, nor pistons become worn in short time.



One-piece cylinder and base. Note wide bearings.

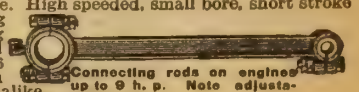
2. Masterpiece engine bearings extra wide and heavy lined—makes for long years of service. Wide bearings run smoother—do not overheat. Main bearing caps of special design held in place firmly on crank shaft by heavy steel studs locked with [illegible] am nuts—cannot work loose. Elevated hard oil cups on main bearings from 4 h. p. up insure easy oiling in operation.

3. Highest carbon drop forged steel crank shafts up to 9 h. p. Larger engines have crank shafts cut and turned from solid steam hammered billet of high carbon steel. Every crank tested in excess of hardest power strain.

4. Our own Economy carburetor saves gasoline—gives better mixture—more power—than any carburetor we ever used. Makes gasoline power more satisfactory than kerosene. Designed by our engine builders. Only on Masterpiece engines. Simple in construction—few parts. Starts easy in cold weather. Adjustable air valve. We challenge comparison of this Economy carburetor side by side with any other device.

Steel drop-forged cast cranks on all Masterpiece engines up to 9 H. P.

5. Masterpiece connecting rods have adjustable bearings. Note this steel I-Beam connecting rod on engines up to 9 h. p. Twelve and 16 h. p. connecting rods made from steam hammered billets of high carbon steel Die castings used in connecting rod boxes equal in quality to those on high-priced automobiles. Note length of connecting rods (see catalog). A short connecting rod causes piston to cramp in cylinder and score sides of same. High speeded, small bore, short stroke engines most always have short connecting rods. Crank pin bearings on connecting rods lubricated by automatic hard oil cups. Will last for years. Twelve and 16 h. p. connecting rods are made from high carbon steel, are standarized and exactly alike.



Connecting rods on engines up to 9 h. p. Note adjustable boxes.

NOTE THESE 1917 IMPROVEMENTS

My 1917 model is a mechanical masterpiece from which it gets its name. A master stroke in engine designing built by master engine builders. Superior materials, skilled workmanship, every part standardized, interchangeable, alike. Develops away above rated horse power. Bearings adjustable. No lost motion. Economy carburetor, worth $15 more on any engine, costs nothing extra on Galloway. Cuts down fuel bills. Uses any fuel. Valves in the head exactly like highest class automobile motors. Double ball governor. Large, heavy flywheels. Big bore, long stroke, heavy weight, perfect balance. Perfect lubrication, winter or summer. Magneto (extra) supplies blue-hot spark. Make and break ignitor, never misses fire. Easily started, no cranking; needs no batteries. Cylinder and water pot frost proof. Compare the 1917 Masterpiece engine size for size, bore, stroke, weight and low speed, which means easy running and long satisfactory ergine life. Make comparison, then be your own judge. Galloway engines honestly rated; scientifically, accurately, handsomely built. Our description the truth. Engines shipped from Waterloo, Council Bluffs, Iowa, Kansas City, St. Paul or Chicago, whichever is nearest you.

MASTERPIECE SAWING OUTFITS

All steel flexible trucks. Won't tip over. Regular Galloway Masterpiece engine complete with friction clutch pulley, tongue, belt, belt tightener, everything but the saw. Complete description in catalog. Ask for it today.

READ THESE LETTERS FROM GALLOWAY ENGINE USERS

ONCE THEY WERE HESITATING IN YOUR POSITION. NOW THEY KNOW.

I don't think my 6 h. p. engine can be beat. It hasn't cost me much for fuel as I use only about 6 or 7 gallons of kerosene per week. I call that cheap fuel. J. E. Dailey, Odell, Neb.

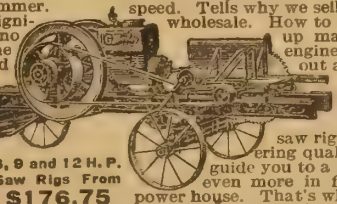
I am well pleased with my 4 h. p. engine. I have given it a fair test and it has proven satisfactory in every respect, and I am well pleased with it, besides I saved money by ordering from the Galloway Company. I shall order more from you in the future. H. L. Frye, Clarksburg, Mo.

I have run gasoline engines of different makes for the past seven years. I find the 15 h. p. Galloway the simplest, most powerful and best governed engine I ever saw run and $225.00 cheaper to me. Henry Wenham, Milton, Wisconsin.

The 6 h. p. engine is working fine. It filled three silos this fall and sawed wood last winter. It worked o. k. every time, Ed Murdock, Fonda, New York.

FREE BOOK OF ENGINE FACTS

I want you to have this new book about Galloway Masterpiece engines. It tells you how to pick out, size up and judge an engine. Gives you engine secrets and facts. Tells why to insist on heavy weight, large bore, long stroke and low speed. Tells why we sell direct to farm or shop at wholesale. How to install an engine and hook up machinery. How Galloway engines are built. How to lay out and build a cheap, efficient power house. Why our prices on high-class portable and stationary engines and saw rigs are so low considering quality. This book will guide you to a saving of $250 or even more in fitting up a farm power house. That's why I want you to get it. Ask today. A postal gets it. Address me as below.



6, 9 and 12 H. P. Saw Rigs From $176.75 to $318.50

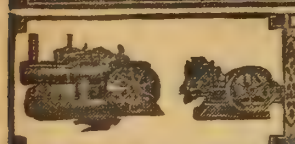
FARM MECHANICS



Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

The Motsinger Auto-Sparker.

I own a small dynamo. It is called "The Motsinger Auto-sparker." I would like to know where this machine is made, as I would like to get some repairs for it.

Answer.—It is made by the Motsinger Device Mfg. Co., Lafayette, Ind.

Using a Water Ram.

In a recent issue I notice that a water ram can be used to force water from a stream up to a house. Can it be used to force water from a spring, taking water from a stream for power? I have a spring that never goes dry, but runs only about ten gallons per minute. I desire to have the water raised by a ram about twenty feet. There is a small creek near by that never goes dry. Could I use this creek water to work the ram and force the spring water to the desired place? I have very little fall from the spring—about three feet in one hundred feet. I could get all the fall necessary if I use the creek water.

Answer.—The creek could not be used to force the spring water by means of a water ram. Your spring furnishes water enough to operate a No. 5 ram successfully. With a four-foot fall you should be able to force about a gallon per minute up a distance of twenty feet. You could get this fall and keep the ram near the spring by placing the ram in a pit near the spring and running a ditch or tile drain from the pit to take care of the waste water. This ram would require a two-inch supply pipe and a three-fourths-inch discharge pipe. It would cost about $15.

Charging a Battery.

I would like to ask whether I can charge a sixteen-volt, thirty-five ampere hour Willard starting battery from a Delco-light farm lighting plant. How should it be connected, and how long would it take to charge it? Would I have to run the generator, or could the small battery be charged direct from the large one? The plant is thirty-two volt.

Answer.—You can use your Delco-light system to charge the starting battery. There are several ways in which the connections can be made. The easiest thing to do is to connect the positive terminal of the starting battery to the positive terminal of the Delco battery, and the negative terminal of the starting battery to the negative terminal of the Delco battery without disturbing the connections of the Delco battery. Then start the generator and charge both batteries at the same time. The smaller battery will charge more rapidly on account of its lower voltage. It should be watched at first, and, if by gasing and excessive heat, it shows that it is charging too rapidly, disconnect it at once. Trouble of this kind is not likely to be experienced, however. Another way to connect the starting battery for charging would be to cut one of the main line wires near the generator, between the generator and the house lamps, and connect the battery to the two ends, being sure to connect the positive end to the positive terminal of the battery. Then start the generator and charge the battery through the house lights. Pull the house light switch before stopping the generator, so that there is no chance for the current from the battery to flow backward through the generator. You can also charge your small battery direct from the large one, connecting plus to plus and minus to minus.

Motor Hard to Start.

I have a Model 75 Overland car with a "Dixie" high tension magneto on it. The car is hard to start when it stands still for a while. Could I fasten dry-cells to the magneto for starting?

Answer.—You could not use dry cells with the magneto. The starting trouble is more likely to be with your carburetor, or with the gasoline you are using, than with the magneto. The Sumter Magneto Co., which makes the Dixie magneto, is now making a snap coupling for their magnetos which is said to be a great aid in starting. Possibly this coupling could be applied to your magneto.

Tractor Gearing.

I enclose a sketch of a tractor that I am figuring on building. If you can help me out on the speed I will be very much obliged to you. The drivers are five feet in diameter. The differential is on the rear axle. Gear F has sixty teeth; gear E has eleven teeth; gear B has seventy-eight teeth. The teeth on gear B are smaller than the teeth on gears E and F. What size must gears A, C and D be to give the tractor a speed of three miles per hour with the engine running 600 R. P M.?

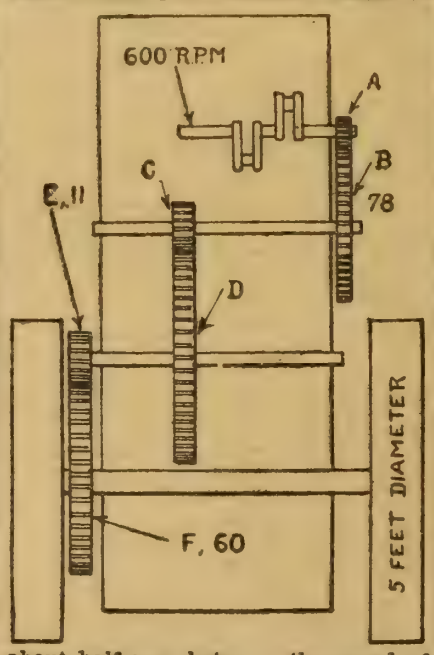
Answer.—The figure is a diagram of the arrangement of the gearing. In working a problem of this kind first find how many R. P. M. the drivers must make. This is equal to 5,280 times the number of miles per hour divided by the product of sixty times the circumference of the drive wheel. The circumference of the drive wheel may be found by running a tape around it; or the circumference may be found by multiplying the diameter by 3.1416. In the present case,

$$\text{R. P. M. of axle} = \frac{5280 \times 3}{60 \times 3.1416 \times 5} = 16.8 \text{ R. P. M.}$$

The shaft on which D and E are mounted will run

$60 \times 16.8 \div 11 = 92$ R. P. M., nearly.

The speed of the jack shaft on which B and C are mounted should be



about half way between the speed of the crankshaft and the rear jack shaft, that is, half way between 92 and 600. If A has thirty-three teeth B will make about 250 R. P. M. The ratio between the two jack shafts will then be 92 to 250, which is 1 to 2.72, nearly. C and D may be any set of gears having this ratio. If C has twenty teeth D should have twenty times 2.72, equals fifty-four teeth.

Concrete Posts For the Farm.

The question as to whether the use of concrete posts on the farm is a practicable proposition or not depends on local conditions. There is no longer any question as to whether they will stand up, providing they are made right. Concrete alone will not stand any stress to amount to anything except in compression and if it is to be used in any place like fence posts it must be re-enforced with steel. Wire has been largely used in the past for re-enforcing, but even the heaviest of wire has not proven satisfactory for a fence that is subject to heavy service. For light service they do very well and are about 10 cents a post cheaper. For insured satisfaction they should be re-enforced with one-fourth-inch steel rods, one in each corner of the post. Good, big posts, square or nearly square, will stand the best of any.

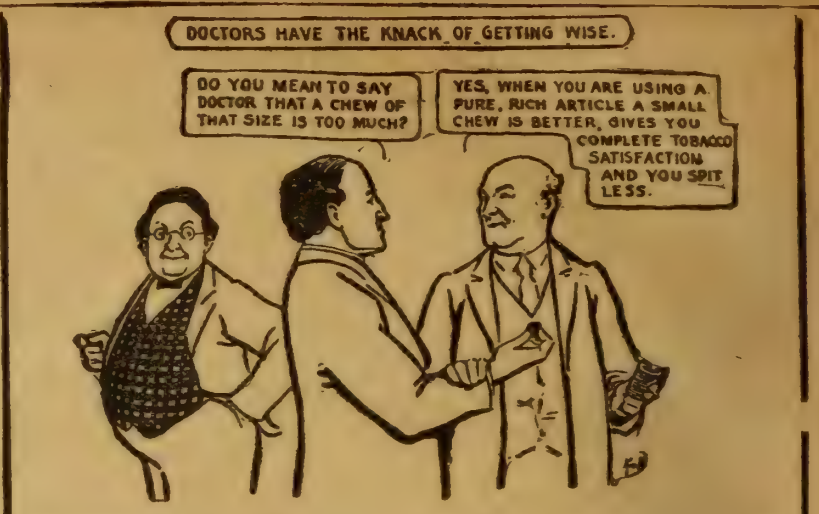
The gravel should be screened from the sand and the posts mixed one part of cement, two parts of sand and four parts of gravel (that will pass over a sand screen). It takes a very short time to pour a half dozen posts, usually not over a half hour after things are ready, but they must be left in the form for four or five days before being moved, so the process of making is relatively slow. Concrete corner posts are all right if made large enough, braced and well re-enforced in the corners. They must be poured in position and are quite expensive.

Concrete is the only post material that gets stronger as it gets older. It is fireproof and substantial. Figured for the number of years concrete posts will stand, they would be very much cheaper than the cedar post with an average life of eight to ten years.

The man that owns his own farm, has gravel handy and will make posts at odd times, will find it pays. Nothing will improve the looks of a place any more than a row of concrete posts. Begin around the house and put them in as you make them. Keep making them and set them away until you have a supply made. Don't set any until they have seasoned three months.—[Ralph L. Patty, South Dakota State College.

An amortization loan is one in which a part of the principal is paid each time the interest is paid. An amortization loan of $1,000 at 6 per cent running twenty years will require an annual payment of $87.18, while if it is at 5 per cent the payments will be $80.24, i. e., twenty payments of $80.24 will pay the interest and the principal.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET Does not cost much and may be worth a lot to you. Six cents a word each insertion.



GET this under your scalp lock: "If you won't take a little chew don't take any"—that's the W-B CUT Chewing message you hear gentlemen telling each other all over the country. It's common sense applied to chewing tobacco. W-B is *rich* tobacco shredded and lightly salted—and you bet men are glad that it has come about at last.

Made by WEYMAN-BRUTON COMPANY, 50 Union Square, New York City

Where else can you buy a 1½-horse-power gasoline engine of standard manufacture for $28.95? Weighs 278 pounds. Pulls from 15 per cent to 40 per cent more that rated strength. See page 1460, new General Catalog.
Sears, Roebuck & Co. - Chicago.

Famous Four Burr Mills AND BOVEE WESTERN STEAMERS

Grind all your feed at 15 to 50 bushels per hour and small grain in proportion.
We manufacture three sizes of the Four Burr Mills, also Bovee Western Steamers.
Save one-third of your feed by grinding and cooking.

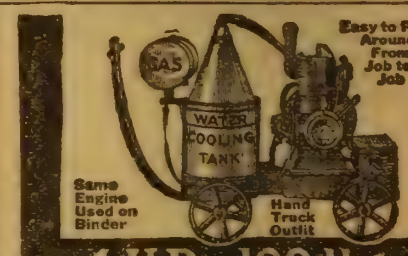
BOVEE FURNACE WORKS
104 W. 8th Street Waterloo, Iowa



4 H.P.—190 lbs.

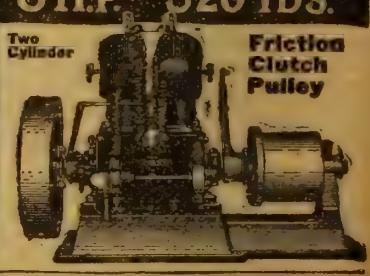
The 4 H. P. Cushman Handy Truck is the most useful outfit ever built for farm work. Engine weighs only 190 lbs., and entire outfit only 375 lbs.

Besides doing all farm and household jobs, this 4 H. P. Cushman may be lifted from truck and hung on rear of binder during harvest to save a team. In wet weather it saves the crop.

Light Weight Cushman Engines

Built for farmers who need an engine to do many jobs in many places instead of one job in one place. Throttle Governed, with Schebler Carburetor. Run very quietly and steadily—not with violent explosions and fast and slow speeds like old-style heavy-weights. Engine Book free.
CUSHMAN MOTOR WORKS
855 N. 21st Street Lincoln, Nebraska

8 H.P.—320 lbs.



Sunshine Lamp 300 Candle Power FREE
To Try In Your Own Home

Turns night into day. Gives better light than gas, electricity or 18 ordinary lamps at one-tenth the cost. For Homes, Stores, Halls, Churches. A child can carry it. Makes its light from common gasoline. No wick. No chimney. Absolutely SAFE.
COSTS 1 CENT A NIGHT
We want one person in each locality to whom we can refer new customers. Take advantage of our SPECIAL FREE TRIAL OFFER. Write today. AGENTS WANTED.

In and Around Wisconsin

COMING EVENTS.

Winter Course Wisconsin Dairy School, Madison, Wis., November 8th to February 1st.
Wisconsin Poultry Association Show, At Madison, January 1st to 5th.
Automobile Show, Milwaukee, Wis., January 5th to 11th.
Wisconsin Cheesemakers' Association, at Fond du Lac, January 10th to 12th.
Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

There is some talk of a malted milk factory in Door county. This would call for a large increase in dairy cows in that section and would put Door county on the dairy as well as the fruit map of the state.

The report of the shipping association at Ellsworth, under the auspices of the American Society of Equity, shows shipment of some large bulls to the St. Paul market recently. David Gotzman shipped a Holstein bull weighing 2,230, Fred Tuebert one weighing 2,090 and Alfred Krause one weighing 2,140. On the day these were shipped the equity society handled six cars out of Ellsworth for South St. Paul.

Matters are progressing looking to the establishment of a cheese factory at Janesville for the manufacture of Greek cheese. This is a new kind of cheese to most Wisconsin farmers, and it is said is made in only two other places in the country. However, the market for this brand is said to be good and farmers, especially those interested in the Rock County Milk Producers' Association, are doing everything they can to get the new factory located and in operation.

Frank McKevitt, a well-known stockman residing near Bloomington, Grant county, was recently thrown from his horse and killed. His lifeless body was found in the pasture not far from his home. McKevitt had a splendid knowledge of Angus cattle and Duroc hogs and he was making quite a success with his live stock. He had been a leading figure in the colt show recently held at Bloomington, and was a man who will be greatly missed by the stockmen of southwestern Wisconsin.

Holstein breeders of Fond du Lac county have organized a county association. It is estimated that one-seventh of the cows in that county are Holsteins, and the first action of the new association was to plan for a consignment sale in the spring and to meet again at Fond du Lac on January 4th. The officers are: President, S. H. Bird, Byron; vice president, S. C. Stanchfield, Fond du Lac; secretary, C. H. Brugger, Empire; treasurer, C. M. Corcoran, Fond du Lac. Directors: Elton E. Gillett, Rosendale; F. J. Bristol, Oakfield; S. M. Randall, Waupun, together with the officers. Committee on by-laws: Elton S. Gillett, C. M. Corcoran and Wm. F. Braatz, Ladoga.

Holstein breeders of Fond du Lac county were recently organized through the efforts of prominent men of the county. The officers chosen are: S. H. Bird, Byron, president; S. C. Stanchfield, Fond du Lac, vice president; C. H. Brugger, Empire, secretary; C. M. Corcoran, Fond du Lac, treasurer; E. E. Gillett, Rosendale; F. J. Bristol, Oakfield, and S. M. Randall, Waupon, with the other officers, constitute the board of directors. It was decided to donate a calf for the boys' judging contest list at the county fair. There is talk of a sale pavilion for the combined use of the several breeders' associations of the county. The following breeders were present at the meeting: S. C. Stanchfield, E. C. Peebles, C. H. Brugger, S. H. Bird, C. M. Corcoran, K. W. Merrill, H. G. Peebles, S. W. Peebles, W. H. Mullen, Charles Barberry, J. Roach, C. H. O'Neil, E. S. Gillett, August Volbrecht, A. E. Tulledge, W. A. Smith, L. H. Brown, O. S. Fenner, T. J. Madigan, A. W. Marchant, B. Clapham, J. E. Peebles, Peter Hammen, Alfred Backhaus, William Braatz, Ed Braatz, Paul Roessler, T. S. Ellsworth, W. H. Fisher, Carl Hayes, S. M. Randall, H. W. Bennett, A. W. Root, Dennis O'Hearn, Sam Stanchfield, H. Cantzler, A. L. Williams, W. F. Braatz, Fletcher Bros., C. W. Keyes, Otto Pfeifer, W. A. Lohae, A. A. Briggs, H. J. Forest. There are some splendid Holstein herds in the county and the leading breeders are anxious to co-operate to advance the interest of all.

In connection with the recent community institute at Fond du Lac, a grain show was held and the following won first awards: Barley, Vaughn West, Ripon; oats, Vaughn West, Ripon; white dent corn, Charles Zimmerman, Peebles; yellow dent corn, H. R. Burg, Peebles; flint corn, John Dunisch, Eden; spring wheat, Charles Ahner, Van Dyne; winter wheat, Vaughn West, Ripon; winter rye, Vaughn West, Ripon; red clover seed, Chris Immel, Fond du Lac; alsike clover seed, Joseph Steffon, Peebles; timothy seed, Vaughn West, Ripon; early potatoes, Willion Zahn, Fond du Lac; late potatoes, A. D. Chesley, Campbellsport; alfalfa, Albert Murray, Ripon.

The Wisconsin Farmer recently gave an account of the first market day in La Crosse. This experiment started out as only a partial success, for while the people of La Crosse came in large numbers to purchase produce, the farmers failed to bring in their stuff. A later report shows that the second trial of market day showed about 200 farmers present with produce, and all of this was taken away before the day ended. One farmer who brought in a whole carcass of beef sold the entire offering in less than an hour. Chickens sold at 14 to 16 cents, potatoes $1.60 to $1.80 per bushel, turkeys 26 to 30 cents a pound, butter 36 to 40 cents and other prices were in proportion. The market square in La Crosse has been a market in name only for years, but it now promises to fulfill its mission.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Digestive Disturbance.

I have a mare colt that was born in April. I weaned her at five months old and she hasn't looked the same or felt the same since. She seems to have good health but her hair looks rough and she looks sleepy. She gets some bran, oats and hay. She has been sick. I would like to know if you could tell me what is the matter with her.

Your colt is probably afflicted with digestive disturbances. Would advise you to have your veterinarian give this colt a good examination and prescribe for it.

Abscess on Jaw.

I have a spring calf that has a large lump nearly the size of a teacup under the jaw. It came there about two weeks ago and seems to be growing larger. Apparently it causes no pain, as the calf eats all right and is doing well. The lump is about half way between the throat and point of jaw bone. Please tell me what you think it is and what to do for it. Should I lance it? I feed kafir corn fodder.

This may be an abscess pure and simple or it may be an abscess from lumpy jaw. You had better have your veterinarian treat this if you want to get quick results.

Paralysis.

I have a black seven-year-old mare that aborted last spring. In about a month she became lame, not having much use of her leg, and shrunk away in one whole hind quarter. Our home veterinarian injected medicine in hip and said she would get well and hip fill in after cooler weather. She seems to be a trifle better in the use of her leg, but the hip has failed to fill out. We would like to know if you think, as our veterinarian did, that she will ever become well again. She has had the absolute run of the pasture since this happened.

There was probably some paralysis following parturition in this mare and later atrophy of the muscles took place. Have your veterinarian give you some good nerve tonic for this mare and inject her hip again.

Question of Ear Mark.

Two neighbors here had a lawsuit over a calf that was born in the spring of 1914, both proving the steer, and the steer in question had both men's ear mark. A's mark was a notch on the bottom lobe of the left ear, being put there when the calf was only about nine or ten months old, so he says, and B's ear mark was slit straight out just below the point of the right ear, being placed there in the spring of 1916, so says B. There was considerable controversy as to which cut or brand was put on first. Now is it possible for a good veterinarian to tell by a medical method which brand or cut was put on first? Is there any way by which it is possible to tell which is the oldest cut? Does the age of calf make any difference in the looks of a scar after it has been healed over for six or more months?

Your question is rather a difficult one, but we would say that it would be very difficult to say which mark was made first, even by an expert, and even appearances of the mark might lead one astray then.

Swelling of Limbs.

I have a seven-year-old mare that is bothered with a swelling in the limbs, commencing at the joints and then going up until the whole leg is swollen. It remains swollen for different lengths of time. It seems that hard work or hard driving will start this swelling, and standing in the barn makes it worse. This mare at one time almost had poll evil and at the present time this swelling seems to have gone to one of these lumps. When this mare was two years old she had the distemper. At that time it got hard on her breast and never broke.

Why haven't you had this mare examined long ago by a competent veterinarian? This mare's system is probably in a run-down state from her former troubles. Try giving her rest and freedom in the pasture and give her one tablespoonful of liquor potassi arsenitis in a half pint of water as a drench every morning. Remember this is poisonous and don't give any more than stated. This may help to put her in better condition if followed up for some time.

A Hog At His Best

He's never at his best if he's wormy. Neither is your other stock. Worms distress animals, retard thrift, bring on contagious diseases. Get rid of worms.

Dr. Hess Stock Tonic

Expels Worms Makes Stock Healthy

I tell you it pays to condition your stock now, in midwinter. Use Dr. Hess Stock Tonic and clean out their systems, purify the blood, then they will eat with a relish and digest their food. Buy it from the local dealer—the man you know in your town.

Why Pay Peddlers Twice My Price?

Costs you one-half less to buy and requires no more at a time to feed.

25-lb. Pail, $2.00; 100-lb. Drum, $6.50

Smaller packages as low as 50c (except in Canada and the far West and the South).

My Guarantee

So sure am I that Dr. Hess Stock Tonic will positively rid your hogs of worms and keep your stock healthy and vigorous, that I have authorized my nearest dealer to supply you with enough for your stock, and if it does not do what I claim, return the empty packages and get your money back.

DAIRY

Moisture in Cheese.

The amount of moisture which shall be permitted in Wisconsin cheese has always been a thorn in the side of many of our cheesemakers. Differences of opinion as to what constitutes the proper percentage of moisture have prevented any definite agreement and every legislature for the last dozen years has had to fight with this problem. As the coming legislature and the Wisconsin Cheesemakers' Association at their first meeting in Fond du Lac county in January will have the matter up for consideration again it is interesting at this time to note the result of moisture tests and investigations of Wisconsin cheese made during the past summer by Prof. J. L. Sammis, of the Wisconsin Dairy School, Mr. L. J. Schenkenberg cooperating.

To learn how much moisture the general run of Wisconsin cheese contained in 1916, 567 samples were collected from about twenty-five cheese dealers who were asked whether the samples submitted were considered fit for (1) export; (2) southern trade, or (3) too soft and moist for either purpose. Of this number 243 samples, or 43 per cent, were considered too moist for the dealer's trade, although the average moisture content in this class decreased from 41.45 per cent between May and September. From May 25th to September 1st the moisture content of cheese in the southern trade decreased from 39.24 per cent to 37.68 per cent and a slight decrease also in the export class. Professor Sammis on the basis of these figures draws the following interesting conclusions:

For the months of April, May and June the best place to draw the dividing line between the "southern trade" and "too moist" classes is at 40 per cent moisture, and that ninety-two out of the ninety-nine export cheese, and seventy-five out of the eighty-five southern trade cheese (or 90 per cent of all) fall within this limit, containing less than 40 per cent moisture. On the other hand 101 out of 128 'too moist" cheese would be excluded, as containing over 40 per cent of moisture. The best place to draw the dividing line as to moisture for the months of July and August is found to be at 39 per cent, but here only 82 per cent of the export and southern trade cheese would pass as containing less than 39 per cent moisture, while onl. 63 per cent of the "too moist" cheese be excluded as containing more than 39 per cent moisture.

This variation from 40 to 39 per cent corresponds to the fact well known to cheese dealers that in the cooler months of spring, a somewhat softer cheese can safely be shipped to the south than could be used for the same markets later in the season.

If the proposed moisture limit were set at about the dividing line between export and southern trade cheese at 36 per cent or less, over half of the state's cheese would have to be made firmer than at present.

If it is considered that the export and southern trade cheese now contains a satisfactory amount of moisture, and that it is only the "too moist" cheese which needs to be improved, the proposed limit would appear to stand at about 39 or 40 per cent. Since a standard of 40 per cent before and 39 per cent after July 1st of each year would not be practical, it is likely that 39 per cent is the preferable figure, which would prove acceptable to the majority of cheesemakers. If the standard were set at 39 or even 40 per cent, it can be seen that the moisture content of about one-third of the entire output would be reduced, and a great improvement effected.

Preventing Moldy Butter.

Placing butter tubs, covers and liners in water heated to 150 degrees Fahrenheit or above for a few minutes previous to packing is about the cheapest and most effective method of preventing mold, according to E. G. Hastings, college of agriculture, in an address before the Wisconsin Buttermakers' Convention here today.

"Cuts of several cents a pound on moldy butter are as common as they are wholly needless and preventable," stated Mr. Hastings. "To presume that poor refrigeration in storage and transit is the cause of moldy butter is to hit wide of the mark. The three chief essentials for mold growth are food, moisture and air. If tubs and paper have been so stored that no growth of molds has taken place on them, if the cream has been properly handled, there will be no vegetative growth of the mold spores on the paper, tubs, or in the cream."

In his summary the speaker mentioned the following points:

Unsalted butter has been found more likely to develop mold than the salted product.

Rubbing tubs with salt and soaking them in brine, and similar precautions cannot take the place of processes by which the molds on paper and tub shall be actually destroyed.

Mold is not likely to develop on salted butter placed in containers and wrappers which have been kept dry in storage before packing.

Mold is easily killed by hot water or steam, at much less expense than by the use of certain chemical agents.

As a still further precaution, it is advisable to pasteurize all cream and thus destroy all mold spores in the product at the outset.

Water For the Cows in Winter.

If water and fresh air cost something for our animals they would be used to a better advantage. Hens require water to lay eggs. Cows no less require an abundance of water to give milk. To be convinced, it is only necessary to read the analysis of a pound of milk or an egg.

That the water must be "good and pure" goes without saying, but that one thing has been harped upon so long as to become tiresome. Going a trifle deeper into the question, do our cows get water at all through zero weather? An accusation of this kind would, of course, cause any self-respecting farmer to become indignant, and with some reason, because no one would permit an animal to suffer for water if only from a humanitarian standpoint.

They "get water," but from where? In all too many cases it is from a tank where a hole has been cut through ice twelve inches thick, out in the open, where the cold wind is blowing, causing her to get yet another hump in her already crooked back. Other animals often refuse to drink as much water as necessary under this kind of condition, but cows just simply cannot drink; their teeth cause them pain, and the result is that they do without.

It is with a good deal of amusement that we read about giving our cows "fresh cold water" if we would prosper. The fresh may be all right, but we have seen cows leave a tank of such in hot weather and snatch the really warm water flowing from a heated pipe, in preference. Cows are built this way, and by observance it is possible to learn what is better for them.

Few are the cases where water is "piped to the stalls," on the general farm, where the dairy cow is a side line. Few are the times we can follow the advice of the ones who have modern improvements to the letter; but certain it is that in the main we can profit by each and every experiment. The point is that the cow needs water at least 20 degrees above freezing, or warmer, and how to get it on the average farm.

A tank heater may be purchased at a small cost and will pay for itself many times over in one winter.

HONOR ROLL OF BUTTER-MAKERS.

Following are the names of the buttermakers who have received the highest scores at the conventions of the Wisconsin Buttermakers' Association since it was organized at Madison in 1902:

	Score
1902, Geo. H. Holmes, Baraboo	98.00
1903, G. G. McIntyre, Whitewater	98.00
1904, W. H. Larson, Neenah	97.00
1905, I. W. Stryker, Lomira	97.00
1906, F. E. Anderson, Somers	97.50
1907, F. E. Anderson, Somers	96.00
1908, L. P. Holgerson, Troy Center	97.00
1909, G. P. Sauer, East Troy	96.66
1910, F. E. Raven, Bloomer	96.50
1911, I. W. Stryker, Nashotah	96.50
1912, I. W. Stryker, Nashotah	97.50
1913, L. L. Bolstead, Basco	97.50
1914, John E. Mattson, St. Croix Falls	96.16
1915, H. H. Whiting, Johnson Creek	97.00
1916, L. L. Bolstead, Basco	96.50

Cow-Testing Reports.

Sparta-Tomah Association.

To the Editor:—The Sparta-Tomah Cow-Testing Association had twenty-one cows during the month ending December 10, 1916, which produced forty pounds of fat or over. Ray Augstin had the highest herd average for the month. His herd of eight Holsteins produced an average of 945 pounds of milk, 4.2 per cent test, or 39.7 pounds average fat. The highest producing cow was a Holstein (grade) owned by J. W. Leverich, of Sparta. She gave 1,386 pounds of milk of 4.2 per cent fat, or 58.2 pounds. She is a four year old. The seven cows producing forty-five pounds of fat or over for thirty days ending December 10th, are as follows:

Owner and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
J. W. Leverich					
Gr. Hol.	4	11-20-16	1386	4.2	58.2
Gr. Hol.	7	8-13-16	1110	4.3	47.7
R. B. Robertson					
Gr. Guern.	5	11-12-16	975	4.8	46.8
N. J. Hansen					
Gr. Guern	6	11-20-16	1134	4.3	48.7
Ray Austin					
Gr. Hol.	6	11-25-16	954	4.9	46.7
Gr. Hol.	4	11-21-16	996	4.7	46.8
George Jordan					
Gr. Guern.	5	8-30-16	1032	4.6	47.4

Cleaner Milk—More Milk

THERE'S a copy of this book for you if you will simply tell us when you expect to build, remodel or equip a barn, and for how many cows. It contains nearly thirty plank frame construction blue prints—also valuable advice on barn sites, drainage, ventilation, arrangement, lighting, etc. Written by W. D. James and his expert assistants in barn planning and equipment building.

"JAMES" Sanitary Barn Equipment

"James" is the sterling mark of barn equipment—and costs no more than ordinary kinds. Stalls, Stanchions, Pens, Carriers, Ventilators, Horse Stable Equipment, Bull-Staff, Trucks, Watering Buckets—all are completely described in the book. *You* can afford James equipment. Ask about our Step-by-Step plan of equipping. *Start right* toward bigger barn profits, less labor, bigger milk production. Write today.

UPPER WISCONSIN

Wisconsin No. 25 Corn.

To the Editor:—I am glad to send some word to your valuable paper regarding my experience with Wisconsin No. 25 corn. I am really more anxious about hearing from other people and of their success and experience than I am of telling my own. I believe, however, that Mr. Delwiche, in charge of our experiment station, has not overestimated the value of our Wisconsin No. 25 corn. I believe that with a little co-operation by those who are growing this variety, the type and yields may be brought to a standard which will surpass the older varieties. Usually pick from 200 to 300 bushels for seed and out of this I select 200 ears for my own seed. From my crop of 1915 I sold seventy bushels of seed corn at $8 a bushel and ten bushels at $5 a bushel, making a total of $610. My corn took second place in the state-wide grain exhibit at the University of Wisconsin in the winter. I believe that with proper care and attention good corn can be raised in the Upper Wisconsin country. But a great deal depends upon the seed and the variety must be acclimated. The Wisconsin No. 25 is a cross between the Wisconsin No. 8 and an early yellow dent variety, secured in the northern part of the southern peninsula of Michigan. The cross was made in 1911 and the new variety was first grown at the experiment station in Spooner in that year. The standard for this variety is a deep yellow with a somewhat reddish tinge, a rather deep kernel, and twelve to sixteen (preferably fourteen) rows. I expect my 1916 corn crop to run about $86 to the acre. The Wisconsin No. 25 corn has run about seventy-five bushels to the acre, and I expect that a good part of my seed will bring me $3 a bushel. I am certain that any Upper Wisconsin farmer with good soil and good cultivation methods combined with the right seed can make a success with corn in Upper Wisconsin. I did it with a wet year and also with a dry year and am well pleased at the returns for my efforts.

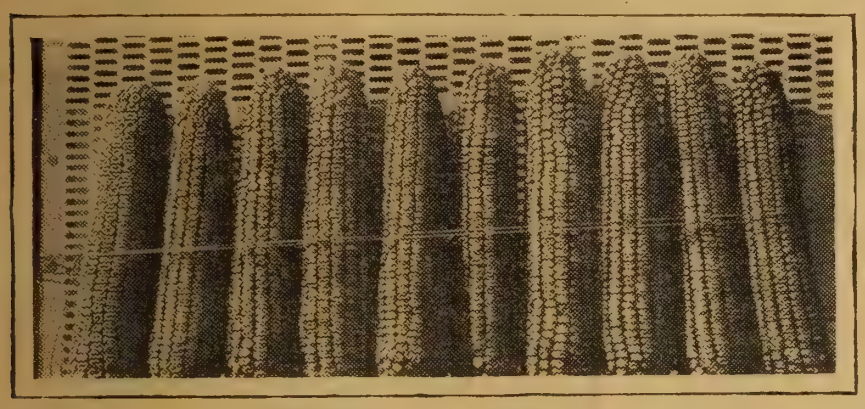
Marinette Co., Wisconsin.



WISCONSIN NO. 25 CORN—1916.
This picture loaned to Wisconsin Farmer by E. J. Delwiche in charge of Oakland Junction Station.

Trying Molasses in Feed.

A number of farmers in the vicinity of Ladysmith are going to try out molasses as a stock food this winter and believe it will prove very profitable mixed with other foodstuffs.

Mike Arts, who lives near Tony, is one of the first, if not the first, to try feeding molasses to stock. He had a lot of clover hulling that his cows absolutely refused to eat, throwing it out of their way with a toss of the head.

A report to The Wisconsin Farmer from Rock county says Mr. Arts purchased a barrel of molasses at 28 cents a gallon and reduces it by mixing it with water as he uses it. He uses two or three quarts of molasses a day, sprinkling the solution on the clover hullings, which his cows then eat with the greatest avidity. Every particle of the feed is now licked up, slick and clean.

Molasses at 28 cents a gallon costs about 3 cents per pound, so that it cannot be classed as a highly expensive food when it is considered that ordinary feed is worth over 2 cents per pound.

The molasses used by Mr. Arts is ordinary New Orleans table molasses and if there is sufficient demand a cheaper grade can be secured that will be just as valuable as a feed and considerably lower in price. An additional economy can be gained by shipping it in carload lots.

Thinks No. 25 Corn Best.

To the Editor:—I have raised Wisconsin No. 8, No. 12 and No. 25 corn, and this is my third season for the No. 25. I keep dairy cows and raise hogs. I never cut corn fodder for cattle if I have enough other rough feed. I raise corn and barley to fatten the hogs. If corn gets ripe I feed it and sell the barley. If not I turn my stock in and dairy it down. My No. 25 corn this year was planted the last week in May and was all in the crib November 1st, and yielded about forty bushels to the acre. There is not a rotten ear in my corncrib at this time. No. 25 is larger both in ear and stock than No. 8 and just as early. It is somewhat smaller both in stalk and ear than No. 12, but I find that it is much more certain of ripening. I think it would be best for silage, though it would sacrifice a little in bulk to get the matured grain. I have also raised some of the flint types in this northern country. So far as I can judge from my own experience No. 25 is the most satisfactory corn to raise.

George H. Gose.

Marinette Co., Wisconsin.

More Cheese Factories.

Two more cheese factories have been erected in Rusk county, which is showing a remarkable development in the dairy industry. The new factories are at Tony and Flambeau. Rusk county is not only adding to her own wealth but helping swell the dairy receipts of the state, and, furthermore, is a good market for southern Wisconsin dairy stock.

How a County Agent Keeps Busy.

Mr. John S. Klinka, of Polk county, recently made a report of his work as agricultural representative. Some idea of the character of work which such a man does may be gathered from the following table:

No. of letters and circulars written	2,445	4,234
No. of conferences and phones	232	479
No. of calls made at farms.	232	463
No. of meetings and lectures	47	50
No. of attendance at these.	...	2,589
No. of herds of cattle tested for tuberculosis	18	9
No. of head of cattle tested for tuberculosis	138	94
No. of herds vaccinated for blackleg	8	22
No. of head vaccinated for blackleg	95	182
No. of preliminary surveys.	9	22

Mr. Klinka conducted two short courses for boys, assisted in organizing a cow-testing association; made twenty-nine surveys for drainage projects; assisted in planning twenty barns; helped to conduct corn and potato contests; helped to get up the state fair exhibit; assisted in installing a septic tank, and conducted five excursions of farmers, including trips to St. Paul; to Washington county, Minn.; to St. Croix county and through Burnett county.

Superior as Grain Market.

Almost 100,000,000 bushels of grain passed through the Superior, Wisconsin, elevators and mills within the past fiscal year, according to a statement of grain tax collected by the city treasurer. A tax of ¼ mill is levied on wheat and flax and 1-8 mill on all other grains, and this nets the city of Superior about $20,000 a year. Of the total taxed during the past year, 67,000,000 bushels was wheat and flax.

Gets $4,500 For Potatoes.

C. P. Coon, of Belden, Rusk county, Wisconsin, disposed recently of 3,074 bushels of potatoes for a total sum of $4,500, on an average of about $1.45 per bushel. Mr. Coon is one of the progressive potato growers of Upper Wisconsin and his name has been prominent in the work of the Wisconsin Potato Growers' Association.

HIDES AND FURS.

A New Way to Grade Furs

We have created a new system for grading furs. One that will protect you. No one man can grade furs rightly at all times. So we have established a commission of three fur experts who have done nothing but judge furs for years. They will grade all furs you send us and price them according to the highest market reports.

We are the largest firm in our line in America. We have large markets to supply. We have to protect your interests if we are to get a good, steady supply of pelts. That is why we established this commission. To protect you. To protect the fur business. It was simply good business. For we make more in the end by paying *you* more. We want high-grade pelts, and we are helping trappers to get them by our free premium system—equip all trappers who trade with us.

FREE TO HUNTERS AND TRAPPERS—AUTOMATIC REVOLVERS, GUNS, TRAPS, etc.—who join our co-operative plan. So don't be tempted to sell furs elsewhere until you read the particulars of this plan. We believe it will make a big year for you if you take advantage of it. Write for our Fur Club News, Fur Market Reports, Premium List, and List of Prices. All of these will be mailed to you free, upon request. (25)

S. SILBERMAN & SONS (Est. 1866), Largest Fur and Wool House in America, 1119-1125 W. 35th St., Chicago, Ill.

EGGS for hatching from Barred Rocks, E. B. Thompson's Ringlets, $1.25 per 15, prepaid. D. S. Thorosen, Shell Lake, Wisconsin.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

How Are Your Hens Laying?

To the Editor:—He who succeeds in getting hens to lay in the winter—all winter and every winter—has learned the secret of financial success in poultry raising. It is not an easy thing to do, yet is being done by many right along and all who do it make good money out of their business whether in a large way or on a small scale.

Winter is nature's rest period for the hen; a wise provision for the protection of her young. But science can change nature very materially in nearly all domestic animals and in none more radically than in the barnyard fowls. Flocks of hens that are allowed to shift for themselves for two or three generations will not lay a dozen eggs each from October to March if the weather stays cold and even later if the weather stays rough. This statement can be verified on many farms every year in almost any neighborhood. Again there are farms where attention is given to the breeding and care of the poultry and where 40 to 50 per cent of eggs are gathered right along through the winter.

Now, what makes the difference? Simply attention to the breeding, feeding and general care of the flock. Among the hens there will occasionally be one or more that will molt earlier than the average. She or they will usually commence laying soon after the molt is completed, and, in most cases, such hens will lay more or less all winter if their conditions are anything like favorable. Such hens are worth their weight in nickels as breeders, providing they are pure bred or nearly so. I would emphasize "pure bred" because they are on the whole the best. One may cross pure-bred fowls and from the first cross get some extra good layers, sometimes surpassing the parents on either side, but if these half breeds are used for breeding purposes it will almost always be found that their progeny are poor layers.

Do not fail to save all your early laying pullets from your pure-bred stock, for the pullets that begin laying comparatively young, especially in the fall, will usually prove a splendid winter layer and consequently a good breeding hen from which to raise winter layers.

Continue this method of selecting young breeders for a generation or two and you will have a flock from which you can reasonably expect winter eggs regularly, provided they have the necessary care and feeding.

A second essential in securing a good egg yield in winter is the housing of the layers. This should be done before the cold weather sets in, anyway before the snow comes. If laying pullets and hens are allowed to run out, even in a light snow, it will at once stop most of them from laying, and once checked in cold weather it is not easy to get them started again. House the layers if you want winter eggs. It is not so essential that the house be really warm or expensive, but it should be dry and practically wind proof on west, north and east sides. The south side should be more or less open and should have a large open space of at least 3x4 feet for every fifty fowls. This opening may have a muslin screen which can be closed in case of severe storms from the south. The birds must have fresh air to insure good health. If the house is small a good scratching shed will be appreciated by the fowls and will pay large returns on the slight expense of building it.

If you are living on a rented place and do not want to buy lumber and build a henhouse, or, if your means will not admit of your doing so, a very good and comfortable house can be constructed with almost no expense at all by using simple posts and poles or cheap old lumber, making double walls which can be covered with straw. By making the spaces in the side walls several inches thick and packing the straw quite solid the house will be free from drafts and very comfortable. The third essential in getting winter eggs is the feed. This should consist of a variety of grains, as corn, oats, wheat and barley, together with corn and oats chop and wheat bran and shorts. Pumpkins, beets, turnips and any other vegetables usually raised on the farm can be fed, as much as the fowls will eat either raw or cooked, with good results.

It is a simple matter at this season of the year and all winter as well to cut up a pumpkin or some turnips or beets and put them on the stove in some suitable vessel and let them cook for an hour or so when they will be soft. Into this when cool enough work the bran or meal with the hands until thoroughly mixed when the fowls will relish it immensely. You can look for eggs from a laying strain when they are fed liberally with vegetables thus prepared and plenty of grains.

Subscriber.

Importation of sugar beet seeds into the United States in the nine months ending September 18th, one-half million pounds, broke all previous records, according to a department of commerce statement. This exceeded by more than a million pounds imports in the calendar year 1913-1914 and was almost twice as much as in the full year 1912. Russia is now the chief source of supply whereas, prior to the war, Germany held the bulk of the trade. Total imports of sugar beet seeds in the fiscal year ended June 30th were 9,042,090 pounds, of which Russia furnished 5,881,946 pounds.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. LANDS AND HOMES

PROSPERITY IN CANADA

THOUSANDS of farmers in Western Canada have sold their crops this year for more than the total cost of their land. Land at $15 to $30 per acre has produced crops worth $40 to $75 an acre. Stock raising and dairying are equally profitable—hogs and beef highest in country's history. Irrigation districts producing more alfalfa and fodder crops than ever before. Get your farm home from the Canadian Pacific Railway. Last year I asked you to take advantage of this opportunity—you might have paid for your farm with the 1916 crop—again I extend the invitation. Good land from $11 to $30 per acre; irrigated land from $35; 20 years to pay; government guarantees land and water titles. Pay in full at any time if desired. We will lend you up to $2,000 in improvements in certain districts, with no security other than the land. Ready-made farms sold on special easy terms. Loan for live stock after one year's occupation, subject to certain reasonable conditions explained on request. Low taxes; no taxes on improvements. Free schools; full religious liberty; good climate, and the best neighbors in the world. Other farmers becoming rich in Western Canada; you have the same opportunity. Buy direct from the Canadian Pacific Railway. Write for free book and full information. J. S. Dennis, Assistant to the President, Canadian Pacific Railway, 82 Ninth Avenue, Calgary, Alberta, Canada.

TO SETTLE AFFAIRS

OF company will sacrifice 16, 604 acres, admirably situated for cattle purposes. All kinds of forage, fruit and truck crops can be raised. Conveniently located between Miami and West Palm Beach; on canals and near railroad. Price $10 acre, reasonable terms, might consider sub-dividing. Pasture all year round. Full information A. W. Cain, 1010 Bisbee Bldg., Jacksonville, Florida.

240 ACRES for sale; well fenced, partly hog tight; 8-room house, barn 50x52; new, good outbuilding, well improved; soil black loam, all tiled; forced to sell; $150.00 per acre; ½ mile town, on state road. Write. Fred Eisele, Avoca, Minnesota.

FOR sale, 62 acres, good wire fences, 4-r. house, large orchard, fine water, tools, telephone. R. F. D., 5 miles from best market. Price $1,600. Easy terms. A.L. Wilkins, R.1, Bx.50, Union, N.Y.

COME away from the snow. Homes, Farms, Lands in Southern States. Big crops. Low prices. Lists free. Geo. M. Heath, American National Bank, Richmond, Virginia.

TOLD IN THE HILLS

By Marah Ellis Ryan

Author of "That Girl Montana," "The Bondwoman," "My Quaker Maid," Etc., Etc.

(Copyright Rand McNally & Co.)

PART III. "Prince Charlie"

CHAPTER X—Continued.

A feeling that the story on paper could never convey was brought to every listener by the something in his voice that was not tears, but suggested the emotion back of tears. They had always acknowledged the magnetism of the man, but felt that he was excelling himself in this instance. Tillie and Fred were silently crying. Rachel was staring very steadily ahead of her—too steadily to notice that the hand laid on Genesee's revolver at the commencement of the story had gradually relaxed and dropped listless beside him. All the strength in his body seemed to creep into his eyes as he watched Stuart, trusting as much to his eyes as his ears for the complete comprehension of the object in or back of that story. In the short pause the author, with one sweeping glance, read his advantage—that he was holding in the bonds of sympathy this man whom he could never conquer through an impersonal influence. The knowledge was a tenfold inspiration—the point to be gained was so great to him; and with his voice thrilling them all with its intensity, he read on and on.

The story? Its finish was the beginning of this one; but it was told with a spirit that cannot be transmitted by ink and paper, for the teller depended little on his written copy. He knew it by heart—knew all the tenderness of a love story in it that was careless of the future as the butterflies that coquette on a summer's day, passing and repassing with a mere touch of wings, a challenge to a kiss, and then darting hither and yon in the chase that grows laughing and eager, until each flash of white wings in the sun bears them high above the heads of their comrades, as the divine passion raises all its votaries above the commonplace. Close and closer they are drawn by the spirit that lifts them into a new life; high and higher, until against the blue sky there is a final flash of white wings. It is the wedding by a kiss, and the coquettings are over—the sky closes in. They are a world of their own.

Such a love story of summer was told by him in the allegory of the butterflies; but the young heart throbbing through it was that of the woman-child, who had wept while the two brothers had clasped hands and accepted her as the trust of the dying; and her joyous teacher of love had been the fair-haired, fine-faced boy, whose grief had been so great and whose promises so fervent. It is a very old story, but an ever-pathetic one—that tragedy of life; and likewise this one, without thought of sin, with only a fatal fondness on her part, a fatal desire for being loved on his, and a season's farewell to be uttered, of which they could speak no word—the emotions that have led to more than one tragedy of soul. And one of the butterflies in this one flitted for many days through the flowers of her garden, shy, yet happy, whispering over and over, "His wife, his wife!" while traveling southward, the other felt a passion of remorse in his heart, and resolved on multitudinous plans for the following of a perfection of life in the future.

All this he told—too delicately to give offense, yet too unsparingly not to show that the evil wrought in a moment of idle pastime, of joyous carelessness, is as fatal in its results as the most deliberate act of pre-conceived wickedness.

And back of the lives and loves of those two, with their emotional impulses and joyous union of untutored hearts, there arose, unloved and seemingly unloving, the quiet, watchful figure of the Esau.

Looking at his life from a distance, and perhaps through eyes of remorse, the writer had idealized that one character, while he had only photographed the others; had studied out the deeds back of every decided action, and discovered, or thought he had, it was the lack of sympathy in his home life that had made a sort of human porcupine of him, and none had guessed that, back of the keen darts, there beat a pulse hungry for words such as he begged from his mother at the last—and receiving, was ready to sacrifice every hope of his, present or future, that he might prove himself worthy of the trust she had granted him, though so late.

Something in the final ignoring of self and the taking on his own shoulders the responsibilities of those two whom his mother had loved—something in all that, made his appear a character of heroic proportions, viewed from Stuart's point of view. He walked through those pages as a live thing, the feeling in the author's voice testifying to his own earnestness in the portrayal—an earnestness that seemed to gain strength as he went along, and held his listeners with convincing power until the abrupt close of the scene between those two men in the old New Orleans house.

Everyone felt vaguely surprised and disturbed when he finished—it was all so totally unlike Stuart's stories with which he had entertained them before. They were unprepared for the emotions provoked; and there was in it, and in the reading, a suggestion of something beyond all that was told.

The silence was so long that Stuart himself was the first to lift his eyes to those opposite, and tried to say carelessly:

"Well?"

His face was pale, but not more so than that of Genesee, who, surprised in that intent gaze, tried to meet his eyes steadily, but failed, faltered, wavered, and finally turned to Rachel, as if seeking in some way his former assurance. And what he saw there was the reaching out of her hand until it touched Stuart's shoulder with a gesture of approving comradeship.

"Good!" she said tersely; "don't ever again talk of writing for pastime—the character of that one man is enough to be proud of."

"But there are two men, said Fred, finding her voice again, with a sense of relief; "which one do you mean?"

"No," contradicted Rachel, with sharp decision; "I can see only one—the Esau."

Stuart shrank a little under her hand, not even thanking her for the words of praise; and, to her surprise, it was Genesee who answered her, his eyes steady enough, except when looking at the author of the story.

"Don't be too quick about playing judge," he suggested; and the words took her back like a flash to that other time when he had given her the same curt advice. "Maybe that boy had some good points that are not put down there. Maybe he might have had plans about doing the square thing, and something upset them; or—or he might have got tangled up in a lariat he wasn't looking for. It's just natural bad luck some men have of getting tangled up like that; and maybe he—this fellow—"

Fred broke out laughing at his reasoning for the defense.

"Why, Mr. Genesee," she said gleefully, "an audience of you would be an inspiration to an author or actor; you are talking about the man as if he was a flesh and blood specimen, instead of belonging to Mr. Stuart's imagination."

"Yes, I reckon you're right, Miss," he said, rising to his feet, with a queer, half-apologetic smile; "you see, I'm not used to hearing folks read—romances." But the insolent sarcasm with which he had spoken of the word at first was gone.

The others had all regained their tongues, or the use of them, and comment and praise were given the author—not much notice taken of Genesee's opinion and protest. His theories of the character might be natural ones; but his own likelihood for entanglements, to judge by his reputation, was apt to prejudice him, rendering him unduly charitable toward any other fellow who was unlucky.

"My only objection to it," said Tillie, "is that there is not enough of it. It seems unfinished."

"Well, he warned us in the beginning that it was only a prologue," reminded her husband; "but there is a good deal in it, too, for only a prologue—a good deal."

"For my part," remarked the lieutenant, "I don't think I should want anything added to it. Just as it stands, it proves the characters of the two men. If it was carried further, it might gain nothing, and leave nothing for one's imagination."

"I had not thought of that," said Stuart; "in fact, it was only written to help myself in analyzing two characters I had in my head, and could not get rid of until I put them on paper. Authors are haunted by such ghosts sometimes. It is Miss Fred's fault that I resurrected this one tonight—she thrust on me the accidental remembrance."

"There are mighty few accidents in the world," was Genesee's concise statement, as he pulled on his heavy buckskin gloves. "I'm about to cut for camp. Going?" This to the lieutenant.

After that laconic remark on accidents, no further word or notice was exchanged between Stuart and Genesee; but it was easily seen that the story read had smoothed out several wrinkles of threatened discord and discontent. It had at least tamed the spirit of the scout, and left him more the man Rachel knew in him. Her impatience at his manner early in the evening disappeared as he showed improvement; and just before they left, she crossed over to him, asking something of the snows on the Scot Mountain trail, his eyes warming at the directness of her speech and movement, showing to any who cared to notice that she spoke to him as to a friend; but his glance turned instinctively from her to Stuart. He remembered watching them that day as they rode from camp.

"But what of Davy?" she repeated; "have you heard any word of him?"

"No, and I'm ashamed to say it," he acknowledged; "I haven't been to see him at all since I got back. I've had a lot of things in my head to keep track of, and didn't even send. I'll do it, though, in a day or so—or else go myself."

"I'm afraid he may be sick. If the snow is not bad, it's a wonder he has not been down. I believe I will go."

"I don't like you to go over those trails alone," he said in a lower tone; "not just now, at any rate."

"Why not now?"

"Well, you know these Indian troubles may bring queer cattle into the country. The Kootenai tribe would rather take care of you than do you harm; but—well, I reckon you had better keep to the ranch."

"And you don't reckon you can trust me to tell me why?" she said.

"It mightn't do any good. I don't know, you see, that it is really dangerous, only I'd rather you'd keep on the safe side; and—and—don't say I can't trust you. I'd trust you with my life—yes, more than that, if I had it!"

His voice was not heard by the others, who were laughing and chatting, it was so low; but its intensity made her step back, looking up at him.

"Don't look as if I frighten you," he said quickly; "I didn't come in here for that. You shouldn't have made me come, anyway—I belong to the outside; coming in only helps me remember it."

"So that was what put you in such a humor. I thought it was Stuart."

"You did?"

"Yes; I know you don't like him—but, I think you are prejudiced."

"Oh, you do?" And she saw the same inscrutable smile on his face that she had noticed when he looked at Stuart.

"There—there," she laughed, throwing up her hand as if to check him, "don't tell me again that I am too anxious to judge people; but he is a good fellow."

"And you are a good girl," he said warmly, looking down at her with so much feeling in his face that Stuart, glancing toward them, was startled into strange conjectures at the revelation in it. It was the first time he had ever seen them talking together.

"And you're a plucky girl, too," added Genesee, "else you wouldn't stand here talking to me before everyone. I'll remember it always of you. Tillikum, good-night."

(To be continued.)

Genuine comfort if you ask for and get

The Things That You Want the Most

This Book Tells You How To Get Them

IS it not a fact that the things you want the most seem the hardest to get? Have you wished and waited, oh, so long, for some little luxury that you wanted very much, yet hesitated to buy? A tasteful set of Rogers Silver Ware for your table? Or a pretty brooch; a nice book, a pair of gloves; a shopping bag, or any one of a hundred other nice things that you did not wish to spend money for?

You Can Get What You Want Without Cost

Do not hesitate another moment. Send right away for the book that will tell you how to get the things that you want the most without a cent of expense to you. THE PEOPLE'S HOME JOURNAL premium plan will enable any person to obtain innumerable beautiful and useful articles without cost. By this plan can be obtained wearing apparel, household articles, jewelry and the many other things of practical and ornamental utility that you so frequently require for yourself or family.

Thousands Of Beautiful and Useful Presents Given Away

The character of the articles that we are distributing is attractively varied, and in the assortment there is something that will appeal to everyone. Among other things are.

Bound Books	Pillow Shams
Bracelets	Scarfs
Waist Sets	Shawls
Towels	Centerpieces
Scissors	Toilet Sets
Fancywork Outfits	Bed Spreads
Birthstone Rings	Pocket Books
Silver Thimble	Salt Shakers

THE HOME

H. C. L. and the Dodge Family.

Let us read from the diary of a girl in the year 1916:

December 1st: I am Priscilla May Dodge, age fifteen. I don't like "May" and I can't bear to be called "Prissy." Mother says I'm rather boyish, but I claim that's from association with Jack, my brother, and I surely am glad he's not a sissy.

Well, we're poor and this is all about how poor we are. It's all I have to write about. There's six of us—father, a big, strong, hard-working man; mother, the dearest, most comfortable and chubbiest woman alive; little Ben, our four year old; baby Elizabeth, Jack and I. That's all and it's a plenty.

Yesterday was Thanksgiving and it was hard to find one thing to be thankful for. Father—the best one ever—tried so hard, but financially H. C. L. kept us from having a turkey—and plum pudding—and pumpkin pie—things which as long as I can remember we've had, and in plenty. Little Ben, Jack and I and even baby Betty made a dismal attempt at gayety. But mother understood and so did father. Oh, yes, they're what we have to be thankful for.

December 6th: I don't see whatever we're going to do. Today Jack and I gave up eating butter. It wasn't anything unselfish, we had to. Oh, yes, potatoes are $2.50 a bushel and Christmas looks like a great, big, dark, dismal, unhappy day awaiting us, for only this evening when Jack and I got to talking vociferously about Christmas and presents and—father said with a big hurt in his voice, "We won't be able to have much this year—." His voice trailed off into silence. We knew it was because of H. C. L. Oh, dear, how awful to be poor.

December 9th: I'm so glad Betty is too little to know and to be disappointed in Christmas, but little Ben's just had one Christmas he can remember and it isn't likely he'll have another soon. I was so cross after school that I started right in front of him to rebel against that benevolent personage called Santa Claus and the thought he'd not bring us any presents, and Ben's eyes filled with tears. Then I tried to comfort him, saying of course Santa'd bring him something because he'd been so good. And when Jack came home from practice he and I swore we'd fill up the stockings and not disappoint Ben's expectancy of old Santa. It looks pretty hopeless, with H. C. L. staring us in the face. But never mind. We have a plan.

December 11th: I tended Mrs. Ralston's baby tonight, who is so hateful, when I was just dying to play with our own Betty. Maybe—what a hollow-sounding word—we'll have a Christmas yet. Whatever shall we do! Father and mother talk quietly together after we're all in bed. But I'm not asleep. They're terribly worried, poor dears.

December 12th: Jack and I have ordered a bouncing big "turk" for Christmas, for $10. We don't dare to tell mother and we are shaking in our shoes. Mine are so thin pretty soon I won't have any to shake in unless our plan is a success. Jack says he'd like to biff those who control H. C. L., but it wouldn't do much good, I guess.

December 13th: Mother has been complaining about the dark rings under my eyes and I'm pretty sleepy. Yet Jack is sure, and so am I, that if it works—our plan, I mean—it is worth a sleepless night or two.

December 14th: We've launched our little boat. Here's hoping! My mind has been so full of H. C. L. that I found myself writing in school today, for the "lowest common multiple," H. C. L. Imagine! My mind seems awfully vacant and tired. I'm so sleepy.

December 16th: Why do some people put themselves out to be so horrid when you're poor? Mazie Gardner, who's got everything she wants, began at noon to tell all she was going to get for Christmas and then turned and said, "What are you going to get, Prissy?" Oh, I don't like her. I simply walked off, head up, and when I got around the corner I started to run. I had to get home before I began to cry. Jack found me on my bed and he's great as a comforter.

December 17th: I took Ben when I went down to the grocery and I saw him wistfully eyeing some dangerously red-colored candy, but H. C. L. warned me just in time and we turned away.

December 18th: You'd never know our family for the same one. The past week things have gone badly. Potatoes have soared higher. Milk we cannot buy. Today father had to give our pup away, because he surely does eat lots and H. C. L. won't let him stay. Oh, dear, Zip will be so lonesome. He'll never have anyone like Benny to love him. Oh, dear, poor us, poor everybody.

December 22d: It's come—our turk—and the money to pay for it, and four times more. They've accepted our story—Jack's and mine—and it's published in the Young Folks' Magazine and the Dodge family has two gifted members, hitherto unknown. It's a dead secret until Christmas, and best of all we earned the money all ourselves, and not by tending Mrs. Ralston's pesky child. Three busy days ahead.

December 25th: The best day of all the year is over and just to see little Ben's face when he opened his stocking and to see the merry twinkle in father's eyes and to see mother's happy smile fairly made me dance for joy. Well, the night father said the H. C. L. was going to keep us from having any Christmas we resolved it shouldn't, but that it should help us have a merry time, and it has.

Our plan worked splendidly and if you want to read the account of our life just before Christmas and all about H. C. L., just turn to the Christmas "Young Folks" and there it is in print.

As Jack and I walked home from church tonight, with the snow crunching under our feet and the sky radiant with stars, he said to me, "What a wonderful Christmas day," and laughingly added, "all on account of H. C. L." Tonight I feel like saying," Blessings on H. C. L.," for it bought our Christmas for us and has made us all truly happy.

Why—here I have never said what H. C. L. is, have I? The High Cost of Living, to be sure.

MISS FRANCES DOLLIVER.

Fifteen-year-old daughter of the late United States Senator, J. P. Dolliver, of Iowa, who has written this story for our Christmas number.

The correct way of preparing tea is to take the freshly drawn water at the first boil, scald the teapot, then add tea a teaspoonful for each person and one for the pot; cover with the water, then let stand five minutes, add enough water to serve, allow it to stand a minute, then pour.

Appropriate Christmas Recipes.

Plum Pudding.—One cupful chopped suet, one cupful molasses, one cupful sweet milk, one cupful raisins, one cupful currants, one-fourth pound candied citron, sliced fine, one-fourth pound candied orange peel sliced fine, one teaspoonful soda dissolved in a little hot water, one-half teaspoonful cloves, one teaspoonful cinnamon, flour, one cupful chopped nut meats. Flour fruit and nuts and sift spice with more flour. Make as stiff with flour as fruit-cake batter, and steam five hours.

New England Mince Meat.—Four pounds lean meat (ground) one and one-half pounds suet, eight pounds chopped apples, one pound brown sugar, four pounds raisins, three pounds currants, one-half pound citron cut fine, one quart boiled cider, four cupfuls meat-stock, one cupful vinegar, one pint grape juice, one pint cherry or other fruit juice, one tablespoonful salt, one tablespoonful pepper, mace, allspice, cloves, nutmeg, cinnamon. Mix above ingredients, adding the spices to taste. Cook, then add the juice of two oranges, two lemons and one tablespoonful almond extract. Almond nut meats are a delicious addition.

Christmas Charlotte Russe.—Beat one cup and a half of cream, one-third cup of sugar and half a teaspoonful of vanilla until firm. Take out part of the cream to use in piping. Through the rest of the cream mix six lady fingers, cut in small squares, one slice of fine-grained chocolate cake, cut in small squares and half a dozen candied cherries, cut in slices. Fill glasses. Pipe the plain cream above the mixture and garnish with cherries.

Almond Cookies.—One pound blanched, ground almonds, two cupfuls sugar, one tablespoonful powdered cinnamon, one teaspoonful cloves, two teaspoonfuls baking powder, one teaspoonful allspice, one tablespoonful powdered aniseed, four eggs, flour. Mix the sugar with the almonds, add the spices, egg yolks, baking powder, the stiffly beaten egg whites, and sufficient flour to roll. Roll out fairly thin, cut in fancy shapes—diamonds, hearts, etc.—and bake in a moderate oven.

Candied Squash.—One dozen large pieces squash, one cupful brown sugar, two tablespoonfuls butter, salt. Place squash in casserole, sprinkle with salt, cover with the brown sugar and butter, bake in a moderate oven twenty to thirty minutes, turning once or twice.

THE YOUNG FOLKS

Saint Nick's Suggestion.

Saint Nick went his rounds in an automobile,
And something got wrong with the gear;
It skidded and slewed till the roadway was strewed
With boxes and things far and near;
And when he got fixed, all the labels were mixed,
Which led to surprises quite shocking.
For a pompous professor of history found
A little tin horn in his stocking.

The girls got the toys that were meant for the boys,
Which made a great hullabaloo,
And some of the grown folks got nothing at all
And nobody knew what to do;
'Till someone suggested the happy idea
Of calling Saint Nick to the phone,
To ask him to come and to straighten things out,
As the least he could do to atone.

"I'm sorry," his saintship replied,
"I really can't come, for you see
From my home at the Pole is too much of a ride
More than once in a winter for me;
But I beg to suggest that you take all the gifts
That you find you don't want, every one,
Including the wraps and mittens and caps,
And give to the poor that have none."

—Minna Irving.

Wishes You a Merry Christmas.

Dear Young Folks:—This is the first time I have ever written to your page because we have only taken the paper a few months, but we all like it just fine and I enjoy reading your letters. Every time the paper comes and I read your letters I think I will write to you, but the weeks go so fast.

I am a farm girl thirteen years old. I am in the sixth grade at school. I like to go to school, especially this term, because we have such a good teacher. There are twenty-three pupils who attend our school. I have two brothers and one of them goes to school with me. It is drawing near Christmas time and I wish every one of the Young Folks a Merry Christmas. We are going to have a program at our school the Saturday before Christmas and we will have a Christmas tree. —Velma.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for December 24, 1916.

Unto Us a Son is Given.

LESSON TEXT—Isaiah 9:1-7.

GOLDEN TEXT—For unto us a child is born, unto us a son is given; and the government shall be upon his shoulders; and his name shall be called Wonderful, Counselor, the Mighty God, the Everlasting Father, the Prince of Peace.—Isa. 9:6.

The Christmas lesson naturally and logically follows the three lessons we have just had from the book of the Revelation where Jesus in his glory had been portrayed, and the ultimate success of his work is foreseen in the new heaven and the new earth. Isaiah saw his visicn of his first coming. John saw the vision of his second coming, when what he began the first time shall ultimately be accomplished. The prophecy here spoken was uttered during the reign of Ahaz, B. C. 738 to 723. The king of Assyria was attacking Syria. The tribes of northern Israel were carried away as captives. Judah was in danger of invasion (See II Kings 15:29.) Isaiah was preaching in his home city, Jerusalem. His vision of the Messiah Savior was not more than 800 years before John saw the vision of the glorified Jesus.

I. Darkness Versus Light (vv. 1-5). We need to go back into the eighth chapter to get the full historical situation of this part of the lesson. Ahaz, trembling in Jerusalem, had with him the Prophet Isaiah, the wisest and greatest man in his kingdom, yet Ahaz listened not to his words of warning and rebuke. He doggedly pursued his own course and sought help in every other quarter than the right one. This explains Isaiah's words, "The people that walked in darkness." Primarily he may have referred to those of the lands of Zebulon and Naphtali, the Galilee of the nations (John 1:46; 7:52) and the light which shone in them, which was the light of the world, Jesus of Nazareth (John 8:12). But there is a larger application in this verse to the whole world which lay in darkness until Jesus came, and the whole world has seen or shall see the great light (Luke 1:78-79). With the coming of light comes the increase of joy (v. 3 R. V.) In Israel there is to be, through Christ, a wonderful increase (Isa. 49:20-22; Zech. 10:8). In Christ there is to be great joy, the joy of harvest and of victory. The religion of Jesus Christ is preeminently the religion of joy (Acts 8:8; Phil. 4:4; I Peter 1:8) but the Child that was to be born was to be a Deliverer too, for the "yoke of burden" was a tax of $1,800,000 that had recently been levied by the king of Assyria. It was a night of thick darkness for Israel. Then, even as now, we have the moral darkness. (Read Rom. 1:20-32.) But the prophet saw the joy of deliverance. Jerusalem had been left in peace, Hezekiah succeeded his father, Ahaz, and entered upon a religious revival in the kingdom. The people who had walked in darkness had seen a new light. The prophet saw the dawning rays through the midst of this darkness of ignorance being removed. He also saw the coming of the Light of Men 700 years later, and the multiplication of the nations, the increase of their joy.

II. Unto Us a Son is Born (vv. 6-7). The greatest joy for Israel in Isaiah's time was in this vision of the Messiah, the promised Savior. Isaiah is looking ahead seven centuries. We are looking back nineteen. He was to be king over his people. Name and title is here given. (1) "Wonderful" because of his nature, being both human and divine. The word made flesh and dwelt among us. (2) "Counselor," one who has the wisdom to guide himself and others. No one guided by him has ever failed of true success. (3) "The Mighty God." He was truly God so that we can trust him to the uttermost. He can also save to the uttermost. (4) "Everlasting Father," expressing his divine loving kindness and self-identification with the Father. (5) He is also "Prince of Peace," the one who rules so that peace and prosperity abide in his kingdom. He brings peace between man and God, and between man and man. He is the peace of the soul as well as bringing peace to the soul. The completeness of this picture which Isaiah saw is the one which St. John saw, of which we have been recently studying. These two verses are marvelous ones, not only because of the clear prediction of Jesus of Nazareth, made more than seven centuries before his first advent, but marvelous also for the fullness and richness of the revelation they contain concerning the person, character and work of Christ.

Our Lord's earth life began at Bethlehem, but he was from all eternity (John 8:56-58; John 1:1-2).

As a man is not at peace with God he cannot be at peace with himself or his fellows; but as Jesus restores peace between man and God, he also restores peace to the heart of the individual (Phil. 4:7).

Sunday school officers and teachers should realize the difference between the peace with God (Rom. 5:1) and the peace of God (Phil. 4:7).

Let us see to it that in the fullest sense our scholars may have the Prince of Peace in their lives.

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Special Renewal Offers

NOTICE, WISCONSIN FARMER READERS A CHANCE TO SAVE MONEY!

SUBSCRIPTION rates are going up. Dozens of publications have already announced new subscription prices, and hundreds of others are preparing to do likewise. The cost of paper, ink, labor, etc., has increased over 50 per cent in the last year and the present unsettled market conditions indicate another sharp advance.

Most publishers are rapidly withdrawing all low rate offers. We were fortunate in making contracts for the fall and early winter subscription season months ago, but these contracts are expiring now and we cannot believe that many will be renewed. We, therefore, urge you to take advantage of one of the special offers indicated below. This may be the last time that they will appear. We cannot guarantee them to be good more than fifteen days from the date of issue of this paper, so send in your order today.

All Attractions In Johnson Bros.' Sale.

THE demand at the present time is for Duroc Jerseys with popular blood lines and you'll sure have a chance to buy that kind in the Johnson Bros. sale at Winnebago, Minn., Tuesday, January 9th. Seldom has the buying public ever had a chance to bid on such an attractive lot of Duroc Jerseys. Everyone who knows Durocs knows Royal King, the Royal grand champion and a son of the noted Orion Cherry King and the boar that cost Johnson Bros. $2,650. Not only have these boys purchased the best boar they could find, but they have purchased the best sows in the best sales all over the United States. This statement is verified by the various sale reports that you have seen during the past few years. There will be no spring gilts in this sale, but there are some great yearlings and tried sows. One of the largest junior yearlings we know of goes in this sale. She is by Cherry Chief, out of a Proud Col. dam, and is safe in pig to Royal King. Can you beat it? A Proud Col. sow was one of the tops in the Dr. Still closing-out sale. She goes in this sale. Another Cherry Chief-Proud Col. yearling is bred to Royal King. Six tried sows by King the Col. that are eye-openers. One yearling sired by Royal King would be the top in most sales. One yearling by Illustrator. Two seniors by the noted Educator, and one fall yearling by Premier Gano, out of an Educator dam. One choice senior yearling by the famous Chief Invincible. One of the best tried sows is a daughter of Fancy Col. There will be a few by Grand Model 15th out of a King the Col. dam. We could fill a page talking about this sale offering and then we couldn't do justice to it. You can appreciate the breeding, but you can't imagine seeing forty-five head of sows the like of which will be sold by the Johnson Bros. on January 9th. Most of the offering has been bred to Royal King and the others have been bred to a son of Chief's Col., out of a dam by Future Fame, he by L. E.'s Valley Chief, and to Valley Chief's Col., a litter mate to the last mentioned boar. If some of the Duroc men in Wisconsin would buy two or three of the sows that will sell in this sale and take good care of them, their reputation would be made quicker than by buying a dozen of the inferior kind. Make your plans early to attend this sale. F. M. Washburn sells at Lake Crystal, Minn. (near Mankato), on the 8th and Winnebago is only a few stations south of there, so arrange now to attend both sales. Mail bids should be sent to T. P. Shreve, field man for The Wisconsin Farmer, in care of Johnson Bros., Winnebago, Minn. Write at once for the catalog and please mention this publication.—Adv.

A Thirty-one-Pound Bull For Sale.

IT IS the ambition of every progressive Holstein breeder to head his herd with a thirty-pound bull, as he realizes the benefits to be derived in owning the offspring of such a sire. An opportunity to purchase a thirty-one-pound yearling bull is offered to the readers of The Wisconsin Farmer by Reuben Klofanda, Racine, Wis., on page 23. Mr. Klofanda's herd has been attracting the attention of Holstein breeders throughout the middle West, both by their excellent type and by the large, vigorous cows and their high production ability. We made a trip to his farm a few weeks ago to see his herd, and we can assure you it is a trip well worth making. Here we found a herd of large, strong, vigorous cows, of good, straight conformation, with well-sprung, deep barrels, large, well-hung udders; wide hips, and showing constitution and capacity. An examination of the seven-day and yearly records verified our conviction that they were heavy producers. In several instances there are three or four generations of females in the barn and one can easily see why they are of this good type and of high production ability. It has been developed and intensified by the use of good sires and dams. The dam of the yearling bull offered for sale is a show cow of ideal dairy type. In seven days she made 31.02 pounds butter. In thirty days she made 130.47 pounds butter or six pounds more than four times her seven-day record or an average of 32.61 pounds butter in seven days for four weeks. She is a large cow, weighing close to 1,600. Her dam is also in the herd and is a show cow weighing over 1,700 pounds. The sire of the bull is out of Colantha Piebe of Elm Court that is also in the herd and is of show-ring quality and weighs over 1,600 pounds. Both the dam and sire's dam are daughters of Lad of Home Farm, a son of Colantha 4th's Lad, which was out of the same dam as Colantha 4th's Johanna. In this young bull is combined the blood of Colantha 4th, dam of the first thirty-five-pound cow; Sir Johanna De Kol, sire of the first forty-pound cow; Sarcastic Lad, grand champion at the St. Louis World's Fair, and others of equally good transmitting ability. Send for an extended pedigree and picture of this fine young bull, or better yet visit the herd and see his dam, two granddams and sire's sister and you will be convinced that this is the type of cows you want your next crop of calves to be. The price asked for this bull is very low, considering the type and breeding he represents. When writing or visiting the farm kindly mention Wisconsin Farmer. See page 23.—Adv.

E. J. Wilson's Closing-Out Sale.

WE ALWAYS regret to see a good herd of any breed closed out, but we realize that this move is sometimes necessary. Such a condition exists at the farm of E. J. Wilson, Renville, Minn. A few years ago Mr. Wilson purchased his foundation for a Duroc herd and for this he bought the best sows money could buy from all parts of the United States. The first sale he held made the highest average of any sale offering ever sold in the Northwest, so you may know that he had the goods. Owing to his unlimited knowledge of the Duroc Jersey breed, his services were desired by the Duroc Bulletin and for the past eighteen months he has been field man for this publication. In view of the fact that this position makes it necessary for him to be away from home most of the time, he deems it advisable to close out his herd of Duroc Jerseys; consequently, on Thursday, January 4th, his entire herd will be sold at his farm near Renville, Minn. Seventy head of sows suitable to go into the best herds will make up this offering. The half-page advertisement appears on page 20 of this issue gives information relative to the breeding. Individually they are outstanding and will please the critical buyer. We saw this herd a short time ago and the tried sows are wonderful individuals and no herd has sows of better blood lines. The forty-seven yearlings out of these sows would look good in any herd. The majority of the offering is sired by Chief's Col. 40th, a boar that weighed 925 pounds at the Minnesota fair in 1913 and was shown by Harry Browning and was first in class at Minnesota, Wisconsin, Michigan and Peoria, Ill. His dam was Helen Duchess, she by Ohio Chief, out of Helen Blazes. There are ten spring yearlings by the great Dexheimer boar, Col. Protection. One two year old by Defender, one three year old by Van's Crimson. She was champion at North Dakota in 1914. One four year old by Superba. Others by Big Wonder, the $1,500 Iowa champion, and King the Col. The advertisement tells you what the offering has been bred to—herd boars that will please you. Wisconsin and eastern Minnesota need more and better Durocs and this sale contains sows that will improve most herds. One of the sales that critical buyers should arrange to attend. If it is impossible for you to get away, be represented. T. P. Shreve, Wisconsin Farmer representative, will attend this sale and will gladly handle any mail bids sent to him in care of E. J. Wilson. If you want to read a catalog that contains Duroc history, send for the catalog of this sale. Don't forget the date, January 4th. When writing for catalog please mention The Wisconsin Farmer.—Adv.

Remember the Short-horn Sale at South St. Paul.

START the new year out right by buying a few registered Short-horn cows, and the best place to go for them would be to the sale that will be held at the South St. Paul Stockyards on Wednesday, January 3d. This sale will be made under the auspices of the Minnesota Short-horn Breeders' Association and the state association guarantees every animal that goes through the sale ring. Never has there been a more opportune time to buy beef cattle. The population of this country is increasing and the production of beef cattle is decreasing; incidentally, we are going to have high prices for beef. There are only two countries that have any cattle for sale at this time and they are the United States and Argentina. When the European war is over those countries now at war are going to want breeding stock and they must buy from the United States or Argentina. In the face of these conditions do you see any reason why beef cattle will not command a good figure for years to come? Getting back to our subject, there will be some seventy head of Short-horns sold on the above date. This offering will consist of bulls of serviceable age, some of which are good enough to head the best herds. There will be Scotch and Scotch-topped cows and heifers, calves at foot and cows well along in calf. There will also be some milking Short-horns from one of the best herds in the state. These cattle have all been tested and can be shipped into any state. We have seen some of the cattle that will be sold in this sale and are glad to say that they are desirable specimens of the breed. Wisconsin needs more good beef cattle and this is a sale that Wisconsin breeders and farmers can well afford to attend. For a catalog you should write J. S. Jordan, secretary, Morris, Minn., but don't forget that the sale will be held in So. St. Paul, January 3d. Please mention The Wisconsin Farmer when writing. See page 22.—Adv.

John Swenson Great Sale Offering.

FOR some time we have called our readers' attention to the herd of Duroc Jerseys owned by John Swenson, Willmar, Minn., because he has one of the best herds of this breed in the Northwest. We mentioned the fact that the best sales to be held in Minnesota this winter would be advertised in this publication—not all of the sales, but those having the best individuals. John Swenson is one of the "headliners" and his half-page advertisement appears on page 21 of this issue. He has listed fifty head that any breeder would be proud of. In the first place, Mr. Swenson is a caretaker. He owns a large herd and after culling, those that he retains get the best of care and you will find the offering in bloom sale day. The sale will be held at Willmar, Minn., Friday, January 5th, and will close the week's circuit that starts at F. S. Vanderhyde's on January 2d. To our knowledge, John Swenson is the only Duroc breeder in the Northwest that has, at the head of his herd, two boars that have been grand championship winners at the state fairs. Big Wonder won at Iowa in 1913 and E. J. Wilson and John Swenson paid $1,500 for him and later Mr. Swenson bought Mr. Wilson's interest. This boar has made good and you will like the sows and gilts that go in this sale sired by him. E. J.'s Crimson Wonder was the sensation at the Minnesota State Fair this year. He weighed right at 1,000 pounds and is the acceptable type. About forty head in this sale are safe in pig to this boar and no herd will be complete without some of this blood. We feel safe in saying that you will see twelve tried sows in this sale as good as you ever saw go through one sale ring. They are good mothers and have raised good litters and they are being offered only as attractions. They are by Big Wonder and the noted Chief Defender. You couldn't ask for better breeding. The fact that this sale offering was selected from some 300 head of Durocs should be convincing evidence that the offering is one of merit. This is a sale that our readers who are interested in Durocs should attend, for it will contain sows that will improve herds. Get one of the catalogs, study the blood lines and then arrange matters to attend this sale, but if you find it impossible to get away send bids to T. P. Shreve, field man for The Wisconsin Farmer. Letters or wires should be sent in care of John Swenson, Willmar, Minn. Write for the catalog and please say you saw the advertisement in The Wisconsin Farmer.—Adv.

Lindauer's Holsteins.

FOUR sons of Fairmont Pietje Ormsby are advertised for sale on page 23 by L. Lindauer, Kaukauna, Wisconsin. His dam made twenty-nine pounds of butter in seven days and is a sister to Sadie Vale Concordia 4th, that made forty-one pounds butter in seven days. These young bulls are good individuals and are being priced right. Send for pedigrees and price.—Adv.

Eminent and Golden Fern Jerseys.

THE Eminent and Golden Fern families of Jerseys have long been recognized as among the highest producing families of the breed. Both on the island and in the United States they have been eagerly purchased by the best judges of Jersey cattle, and have sold at long prices. They continue to show their high production ability wherever found whether in the barns of millionaires, in the hands of experienced and scientific feeders or in the ordinary breeders' barns with ordinary herd care. The herd of Ora P. Taylor, Elkhorn, is a demonstration of the production ability of these cows. When we stepped into his barn a few days ago and looked over his herd, we immediately exclaimed, "Mr. Taylor you have a good producing herd, or our observation of what goes to make a good producer is wrong." The majority of the cows are of large size, with uniformly large udders, well quartered, and with especially good front and rear attachments. There is scarcely one in the herd that could not be lead into the show ring wihout getting into the money. After looking over the herd and learning th records which the various animals have made, we again came to the conclusion that cows possessing certain characteristics are almost certain to be heavy producers. The record of the Geneva Cow-Testing Association show that twenty-four head in this herd, including quite a number of two year olds averaged close to 325 pounds of fat last year. This was with ordinary herd care and milked but twice a day. Eleven daughters of Eminent Fancy Lad averaged 350 pounds of fat and showed an average profit above cost of feed of close to $125 per head. At the present time Mr. Taylor is advertising a yearling bull for sale on page 22. He is out of one of these heavy-producing daughters of Eminent Fancy Lad, and is sired by Noble Reindeer, that is out of Golden Fern Reindeer. Eminent Fancy Lad is out of Eminent's Silver Gate a daughter of the great bull, Eminent. For a complete pedigree and further information in regard to this bull write to the above address.—Adv.

That Combination Sale at Owatonna.

THERE will be some good buys made at Owatonna, Minn., Wednesday, January 3d. Owatonna is in Steele county and the Duroc Jersey breeders have formed a county association and on the above date they are going to sell fifty head of bred sows. We, and the men making the sale, realize that one should have some reputation as a breeder or showman to make the most successful sales, and inasmuch as these breeders have never made very much noise, they do not expect extraordinary prices. Now we do not mean to infer that the offering is not worthy of a high average, for there will be sows in this sale as good as will be found in the entire circuit; but to prospective buyers we believe that this will be a good sale to attend. We recently saw the sows that will go in this sale and can truthfully say that it is an offering that should do credit to the association. There will be sows sired by the great King the Col., others by the 1,000-pound Chief Invincible, V.'s Golden Model, B. & V.'s Orion and V.'s King the Col. They have been bred to sons of King the Col., Tommy Doyle, Chief Defender and Lee's Defender. The breeders who are consigning to this sale are R. E. Morrison, C. W. Holmes, Oscar Prestegaard, O. A. Farsted, W. W. Arms. The older breeders through the Northwest could well afford to attend this sale and help boost these new breeders. They will no doubt be good buyers at some of the winter sales and naturally should expect some co-operation. It was through the efforts of W. V. Gousseff, county agent, that this association was formed and he has been working hard for the success of this sale and you can rest assured that he will only accept the good ones for this sale. The sale will be held in Owatonna in a heated building and all will be comfortable. Get one of the catalogs at once by writing W. V. Gousseff, Owatonna, Minn. Send mail bids to T. P. Shreve, field man for The Wisconsin Farmer, in care of Mr. Gousseff.—Adv.

Dopp Brothers' Holsteins.

DUCHESS ORMSBY blood is intensified in both the sire and dam of the bull advertised for sale on page 23 by Dopp Brothers, Oconomowoc, Wisconsin. His sire is out of a sister to the former world's record cow, Pietertje Maid Ormsby, and he was sired by the thirty-two-pound bull, Beauty Pietertje Prince. The dam of the bull for sale is a half sister to the sire of Ormsby Jane Segis Aaggie, the world's champion ninety-day cow. His dam is also a granddaughter of Sir Clyde, that has forty-five A. R. O. daughters, four with records over thirty pounds and twenty-one from twenty to twenty-eight pounds. Every line in the pedigree of this bull shows that high production ability has been bred into him for generations, and there is every reason to

Pleased With Results.

W. A. LAWSON, Rosendale, Wisconsin, believes in The Wisconsin Farmer as an advertising medium for the farmer and breeder. He knows. He has tried it. He writes:

Wish you would discontinue my cattle advertisement, as I have nothing to sell except a few head which I expect to show. Would like to say I am well pleased with the way your paper got results.

If you have any surplus stock let The Wisconsin Farmer put you in touch with buyers. It will carry your advertisement into more than 90,000 farm homes, 75 per cent of them in prosperous, progressive Wisconsin—the great dairy district of the United States.

The Wisconsin Farmer, Madison, Wis.

Guaranteed Circulation, 90,000.

believe that he will sire heavy-producing daughters. Send for a pedigree of this bull.—Adv.

Last Call For the Vanderhyde Duroc Sale.

THIS is the last opportunity we will have to call attention to that sale of good Duroc Jersey bred sows that will be sold by F. S. Vanderhyde at West Concord, Minn., Tuesday, January 2d. This is one of the good sales that we want to urge our readers to attend, for it is an offering that will justify the trip. There will be several attractions in this sale—we mentioned Roxy in last week's issue, one of the best brood sows in the country. There will be one tried sow sired by the noted Col. Gano. One by Van's Crimson, the boar that has sired Van's showyard winners. One yearling by B. & V.'s Orion he by Orion Chief. Five spring gilts by the champion, Van's Wonder, out of a Model Chief 3d sow—good sows. Four spring gilts by V.'s King the Col. out of a Lee's Defender dam. Four spring gilts by Latest Fashion he by the $800 Fashion. Space won't permit us to mention all of the good ones. The offering has been bred to the following boars. Van's Crimson, V.'s King the Col. by King the Col., Long Wonder by Col. High Model out of a Big Wonder—this is some boar and you will want a sow bred to him. There will also be three gilts by Col. Algo Jr., a half brother to the junior champion at Omaha. Just make up your mind you are going to attend a good Duroc Jersey circuit and start in at this sale. From there the crowd will go to the combination sale at Owatonna, Minn., the following day, then to E. J. Wilson's on the 4th and close the circuit at John Swenson's. If you haven't received your catalog, write for same at once and attend the sale if possible. If you can't send your bids to T. P Shreve, Wisconsin Farmer representative. Please mention this paper when writing for a catalog.—Adv.

Yearly Record Holsteins.

A YEARLING bull backed by several generations of high yearly records is advertised for sale on this page by the Pinehurst Dairy, Sheboygan Falls, Wis. This bull is King Segis Concordia Rigtje, born December 13, 1915, so is ready for immediate service. He was sired by the thirty-two-pound bull, King Segis Concordia Hengerveld, that is a son of King Segis De Kol Korndyke whose dam made thirty-seven pounds of butter in seven days. King Segis De Kol Korndyke is the sire of the first forty-pound heifer of the breed and is a full brother to King Segis Pontiac, whose sons have sold for a larger sum than any other bull of the breed. The dam of the young bull offered for sale as a two year old made 704 pounds of butter and gave 16,313 pounds of milk in a year. Her dam as a junior three year old made 550 pounds of butter and gave 14,083 pounds of milk in a year. Her grandam made 918.76 pounds of butter and gave 23,485 pounds of milk in a year. Such high production ability consistently transmitted from one generation to the next is almost conclusive evidence that this young bull will sire heavy-producing daughters. As an individual he cannot be faulted, as is shown by his picture on this page. He is of good, straight type, large and growthy and is three-quarters white. He weighed 115 pounds at birth and has been kept in good growing condition ever since, so that at the present time he is large for his age. Send for a picture and extended pedigree of this young bull if in the market for a herd sire. When writing kindly mention The Wisconsin Farmer.—Adv.

Frauenheim's Guernseys.

AN exceptionally good, young, imported Guernsey bull is advertised for sale on page 22 by O. R. Frauenheim, Random Lake, Wis. This bull is named Imported Ford of Sarnia. He was born July 20, 1915, so is now eighteen months of age and ready for immediate service. He is an excellent individual, being well grown, of good straight conformation and is well marked. His dam, Blanche Flower, is a fine imported heifer and a good producer, giving thirty-five pounds of milk per day with her first calf. She is a daughter of the bull, Raymond 60th, that has more daughters under advanced registry test than any other bull of the breed. He now stands at the head of the Anna Dean Farms. He was first-prize bull in 1910, 1911 and 1912 and is the son of the noted bull, Masher 635, that has thirty-five A. R. daughters and eight A. R. sons. The sire of the bull offered for sale is Flower Boy of the Cloture 3377 P. S., a great son of Masher Sequel, out of a prize-winning daughter of Robert's Golden Jewel. Our readers who want a richly bred bull of good individual merit should write for the extended pedigree of this animal. Mr. Frauenheim is also a breeder of Berkshire swine and has a few very choice boars for sale at the present time. They are of Premier and Masterpiece breeding, being sired by Skylark of Three Oaks. This boar was sired by Pointer Star Longfellow 6th, that is of Star Masterpiece breeding on both sides and his dam was Bessie of Three Oaks, a granddaughter of Sittyton Boy 4th and Aldora Premier 3d. For further information in regard to these animals write to the above address. When writing kindly mention The Wisconsin Farmer.—Adv.

INTERIOR AND EXTERIOR OF THE BARN ON THE ALDEBARAN FARMS, OWNED BY STEPHEN BULL WHOSE ADVERTISEMENT APPEARS ON PAGE 18.

Angus Cattle Sales Good.

E. F. GANZ & SON, Alma, Wis., breeders of Aberdeen Angus cattle report recent sales made from the Buena Vista herd. To Fred J. Kurtz, River Falls, Wis., they sold a four-year-old cow with calf at foot, a yearling heifer and a bull calf. The females were of the Dimple family and the bull was a Ruth. To Fred C. Smith, River Falls, Wis., they sold a four-year-old cow with calf at foot, a yearling heifer and a bull calf of the same families as above. These buyers are progressive Pierce county farmers that realize the value of pure-bred cattle over the scrubs and inasmuch as we have seen the Buena Vista herd we feel confident that the above gentlemen made no mistake in buying their foundation from this herd. If you are interested in the "doddies" write Ganz & Son for a description of what they have for sale.—Adv.

A Coming Ayrshire Herd.

WE predict that the Ayrshire herd of Stephen Bull, Racine, Wis., will make Ayrshire breeders throughout the United States "sit up and take notice," as the expression goes, within the next two years. Mr. Bull has set his ideals very high in his purchases of both males and females, as to breeding, conformation and production ability. He has a large number on advance registry test and will put on every cow as soon as she freshens if she freshens in good condition. Those now on test are going at a very creditable rate and show promise of making splendid records. A demonstration of the high standard Mr. Bull has set, is shown in the barns which he has constructed. Every convenience and sanitary device to maintain the cows in good, healthy, vigorous condition has been incorporated into his stables. The accompanying illustrations show the exterior and interior of his dairy barn and there can be no doubt that his herd will be free from disease in such surroundings. At the present time he is advertising a yearling bull, ready for service from an A. R. dam, which has a record of over 500 pounds of butter in a year. His dam, both grandams and both grandsires are in the advance registry. The bull himself is an outstanding individual three-fourths white, well grown and of good, straight type. Send for his picture and pedigree. When writing will you kindly mention that you saw this write-up in The Wisconsin Farmer?—Adv.

Hasse Holsteins.

THE great demand for registered Holstein females will soon deplete the available supply in Wisconsin, or so it would seem. But there always seems to be a few more show up somewhere. It is a fact, though, that the big, square, well-uddered cows and the most promising heifers are not as plentiful as they were a few years ago. John Hasse, Monroe, Wisconsin, is now offering a few of this kind for sale and we advise our readers to look them up, as the opportunities to get this kind of cattle are getting scarcer every month.—Adv.

Field Men for The Wisconsin Farmer.

H. S. Hoard, eastern half of Wisconsin. Address Room 201, Washington Building, Madison, Wis.

T. P. Shreve, western half Wisconsin and eastern Minnesota. Address Room 201, Washington Building, Madison, Wis.

2 Richly Bred Reg. Guernsey Cows

AND a yearling bull for sale. No. 1—**Imp. Daisy Maid II of the Gree**—has an A. R. record and has 2 A. R. daughters. She is an imported granddaughter of Gov. of the Chene. No. 2—**Tidy's Girl,** a daughter of Raymond of Homestead whose dam gave **13,000 lbs. milk in a year.** Both were bred in May to Gov. Pagenta, a son of Gov. of the Chene. Bull 13 months old, out of Tidy's Girl and sired by Gov. Pagenta.
W. G. Jamison & Sons **Appleton, Wis.**

Yearling GUERNSEY BULL

READY for service. Sired by **Auriculas King of the May** and out of a granddaughter of **Yoeman,** whose dam has given 10,700 lbs. of milk and 487 lbs. fat in a year. Price right. Send for pedigree.
W. L. Breitrick **Greenville, Wis.**

YEARLING GUERNSEY BULL

SIRED by **Bond of Maud Iris** (whose dam made 45.7 lbs. of fat as a 2-yr.-old) and out of a daughter of Benton Harbor. The bull for sale is an outstanding individual.
Emory C. Meltz **Appleton, Wisconsin**

When writing to advertisers kindly mention The Wisconsin Farmer.

The Right Kind of an Individual.

ONCE in a while we field men run across an animal that is a little better than the majority of good ones we see. Such was the case a few days ago when we stopped at the farm of Emory Meltz, Appleton, Wis. He has a yearling Guernsey bull that you have to take your hat off to when it comes to size, development and type. He is eleven months old, but better grown than many we have seen at fourteen to fifteen months of age. He is out of a daughter of Dr. Brophy's great bull, Benton Harbor, that won grand sweepstakes at the 1907 National Dairy Show and sired the first-prize bull calf at the same show. Benton Harbor has four A. R. O. daughters with a record of 524 pounds fat and several others now or soon to be put on test. Mr. Meltz owns three of his daughters and they are all doing very well. The sire of the bull for sale is Bond of Maud Iris, whose dam, Maud Iris, gave 8,433 pounds of milk and made 457.09 pounds of butter. Send for a pedigree and price of this good bull. When writing kindly mention that you saw his advertisement on this page in The Wisconsin Farmer.—Adv.

A Winter in California.

NO ONE needs a change occasionally more than do the farmers and their women folks. Winter is the farmer's vacation time. After the hard season's toil and when the plentiful harvest is put by, why not enjoy a trip to California. There the farm folks can enjoy the splendid mild climate, and recuperate and build up new life and energy, while folks back home are freezing in the zero blasts. The trip can be made so pleasantly and so economically now by the Sante Fe route, that every tired farmer and farm wife should give serious consideration to the opportunity for a health-promoting trip this winter. Write to C. L. Seagraves, Industrial Commissioner, A. T. & S. F. Ry., 2248 Railway Exchange, Chicago, for the California books. They will be sent to you free if you will tell him you read the advertisement in this paper.—Adv.

The Belted Hogs.

BUSINESS in Hampshires continues to be good," part of the contents of a letter received from A. M. Laird, Prairie du Chien, Wis. Mr. Laird says that his gilts simply cannot be beaten at the price, they are in nice condition and are bred to King Haakon, a General Allen bred boar and without a doubt one of the best boars in the Northwest. Mr. Laird gives an iron-clad guarantee with every sow and if you want the sows better get your order

JOHNSON BROS.' ROYAL KING

DUROC JERSEY SOW SALE

WINNEBAGO, MINNESOTA, TUES., JANUARY 9, 1917

45 HEAD

10 TRIED SOWS
25 Jr. & Sr. YEARLINGS
10 FALL YEARLINGS.

BRED TO

ROYAL KING ($2,650), the Royal Champion and two sons of CHIEF'S COL., dam by FUTURE FAME.

ATTRACTIONS NEVER BEFORE EQUALED

TRIED SOWS: 1 Proud Col., 1 Chief's Col. 40th, 6 King The Col., 1 Proud Chief, 1 Fancy Col. YEARLINGS: 2 by Cherry Chief, dam by Proud Col., 1 by Royal King, 1 by Illustrator, 2 by Educator, the tops of Swan's 1915 summer sale, 1 by Premier Gano, dam by Educator, 1 by Chief Invincible, 3 by Grand Model 15th, dam by King The Col. Others by Royal King and Col. Golden Orion.

No herd in the country has better breeding than we have and we will divide with you. Whenever we have purchased Durocs we have always bought the tops, now you get the benefit. No breeder has too much of these popular blood lines.

IF YOU WANT THE BEST YOU'LL ATTEND OR BE REPRESENTED AT OUR SALE

Get one of our catalogs; it contains the pedigrees of boars that have made Duroc history, and sows that are known wherever Durocs are raised. The greatest boars of the breed are represented in this sale. Send all bids to T. P. Shreve, in our care. Cols. Duncan and Kraschel, auctioneers.

JOHNSON BROS. - - WINNEBAGO, MINN.

in soon for Laird sells Hampshires. See page 21.—Adv.

Bulls Well Damed and Sired.

IT IS important to have a bull out of a good dam, and it is equally important that his sire be good. Breeders of both grade and pure breds realize that a bull is half of the herd if a good one and more than half the herd if a poor one, as his opportunity to improve or injure the herd is as great as all the females in the herd. Bulls that will improve your herd are advertised for sale on page 23 by C. Tochterman, Jr., Monroe, Wisconsin. He has been making some very high seven-day and yearly records and has a record of the production ability of his cows. At the present time he is offering bull calves, some ready for service, out of the Advance Registry cows. These bulls were sired by Johanna Bonheur Pietertje 113138, whose fourteen nearest dams average over twenty-seven pounds butter in seven days. When writing kindly mention this paper.—Adv.

Morehouse Makes Good Sales.

F. A. MOREHOUSE is one of the coming Poland China breeders of Grant county, Wis. This is the first year that he has done any publicity work and we have just had a letter from him advising that up to date, November 27th, he has sold forty head of spring boars and gilts at an average of $30 per head. This is certainly a good business and anyone saying that a new breeder can't sell hogs in Wisconsin is mistaken. Mr. Morehouse said that he was one of the breeders that got "cold feet" and castrated about a dozen boars a short time ago thinking he had too many. He is now sold out and could sell more if he had them. Mr. Morehouse's postoffice is Lancaster and those interested in Polands will do well to keep your eye on him. He will have a couple of the good ones in the combination sale at Madison.—Adv.

Madson's Poland Chinas.

WHEN you are buying big-type Poland Chinas be sure to get in touch with M. Madson & Sons, Madison, Wisconsin, whose advertisement appears on page 19. They are developing the type that combine easy feeding qualities with large size. The aim of all swine breeding operations is the pork barrel, and the type that produce a pound of pork the cheapest is the type to breed. At the present time this firm is offering some very attractive young boars that will interest you.—Adv.

Garvens' Holsteins.

TWO good young Holstein bulls are advertised for sale on page 23 by L. V. Garvens, Brookfield, Wisconsin. They are both out of A. R. O. dams of choice breeding. One is sired by the twenty-seven-pound bull, Daisy Johanna 5th, and one by Julip Segis Korndyke. Send for pedigree.—Adv.

1916 Crop Close to Five-Year Average.

(Continued from page 7.)

little being husked. The corn silage is very good, with plenty of mature corn in it. Hay was heavy and the weather conditions were good for haying. Potatoes were very small and few in a hill, but have a very good flavor.—W. J. Mann.

Winnebago County.—The corn crop is practically a failure, so is the potato crop. The 1915 crop of corn was poor, but it was about four times the yield of 1916. Very little corn was husked as nearly all of it was used to fill the silos. There is no contagious disease among the stock, but farmers are reducing their stock on account of scarcity of feed. Forty bushels of shelled corn has been considered an average yield here, but this year's crop will scarcely make fifteen bushels. As it was killed before ripening there is very little nutrition in it. The barley crop was of a fine color and looked well, but the yield was light.—S. L. Smith.

Wood County.—The corn crop was fairly good in this section this year except in a few fields where the corn was a little soft. The average yield is about thirty bushels per acre, running

Services of Expert Live Stock Photographer

Up-to-date live stock breeders are more and more using photographs in advertising their herds. It is the modern way of doing things, and The Wisconsin Farmer is meeting the situation by offering the services of a skilled live stock photographer. Appointments may be made by mail at any time. For estimates of cost and other information write The Wisconsin Farmer.

AYRSHIRE CATTLE.

ALDEBARAN FARMS **A. R. AYRSHIRES**

YEARLING AYRSHIRE BULL ready for service. ¾ white, well grown, good, straight type. Dam has an Advanced Registry record of over 500 pounds of butter in a year. This youngster is backed by rich Advance Registry breeding. His dam, both grandams and both grandsires being Advance Registry animals. Send for pedigree and price. Address

STEPHEN BULL RACINE, WISCONSIN

AN AYRSHIRE OPPORTUNITY

WHEN we got home from the National Dairy Show with our show herd, we found our barns were full to overflowing. We have over 100 head, so as to reduce our herd we have decided to sell about twenty females—heifer calves or bred heifers. Here is an opportunity to get as good as there is in the U. S. or Canada. Prices very reasonable to make them sell quickly. Bulls ready for service and younger from A. R. O. cows. Send for pictures and prices. Address

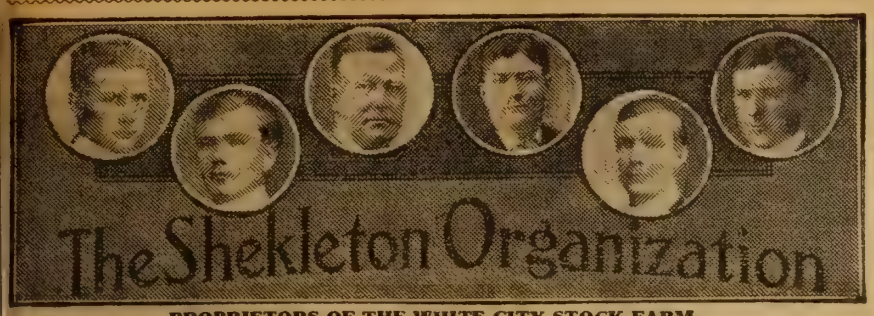
HORSES.



PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot [illegible] on and Belgian stallions, in both imported and American bred stock, than we can now be he[illegible]ted horses [illegible]ot [illegible]nd thoroughly acclimated, many of them having made seasons in [illegible] and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

E. J. WILSON'S CLOSING-OUT SALE

DUROC JERSEY BRED SOWS

RENVILLE, MINNESOTA, THURSDAY, JANUARY 4, '17

70 HEAD 70

8 TRIED SOWS
47 FALL YEARLINGS
5 SPRING GILTS
10 FALL GILTS.

5 spring gilts by Chief's Col. 40th, out of a King The Col. Dam.

ATTRACTIONS

Tried sows and the best money could buy, sired by the GREATEST BOARS OF THE BREED—DEFENDER, SUPERBA, VAN'S WONDER, KING OF COLS., BIG WONDER and KING THE COL.

CONTINUED

The 47 YEARLINGS are by CHIEF'S COL. 40th, he by Chief's Col. out of Helen Duchess by Ohio Chief. Their dams are the tried sows mentioned above.

70 HEAD 70

THIS sale offering is bred to **Gano Chief** by **Col. Gano**, dam by **Ohio Chief**; **Wonder's Defender** by **Big Wonder**, dam by **Defender**; **Col. Protection 3d** by **Col. Protection**, dam by **Pal's Col.** YOU get the BENEFIT at a CLOSING-OUT SALE. It is with regret that I close out my herd of Duroc Jerseys, but on account of other business interests I cannot devote the necessary time to my Durocs. Those that follow this breed know that I have purchased some of the best sows money could buy. The eight tried sows have never been priced before—they are wonderful brood sows, as you can see by the 60 head that are in this sale, out of them. EVERY ANIMAL WILL BE SOLD, REGARDLESS OF PRICE. This is one of the FEATURE SALES OF THE SEASON. Sows that will improve any herd.

I especially invite breeders that appreciate good **Durocs**, but if you can't attend in person SEND BIDS to T. P. SHREVE, WISCONSIN FARMER REPRESENTATIVE, in my care. The CATALOGS are now ready and I have one for YOU—just send your name and address and mention The Wisconsin Farmer. Col. H. S. Duncan, auctioneer.

Attend these sales: F. S. Vanderhyde, West Concord, Minn., January 2d; Combination sale, Owatonna, Minn., January 3d; E. J. Wilson, Renville, Minn., January 4th; John Swenson, Willmar, Minn., January 5th.

VANDERHYDE ANNUAL DUROC JERSEY BRED SOW SALE

West Concord Minnesota **TUESDAY, JAN. 2, '17**

50 Head--- Tried Sows Yearlings and Gilts 50

My Entire Show Herd

THE attraction will be ROXY 325204, one of the greatest producing sows of the breed—every one of her litters has contained prize winners. Five tried sows, dams of my winners—17 fall yearlings and 28 spring gilts. King the Col., Crimson Wonder Again, Orion Chief, High Model, Van's Crimson—in fact the most popular breeding and the fact that I have won more prizes at the northern fairs than any other exhibitor, speaks for the individuality. An offering that will please the discriminating buyer. AM GIVING YOU THE BEST I HAVE. If you can't attend in person let T. P. Shreve, of The Wisconsin Farmer, do your buying, I'll guarantee his selection. The catalog gives detailed information and you should have one—WRITE AT ONCE. H. S. Duncan, auctioneer; T. P. Shreve, field man.

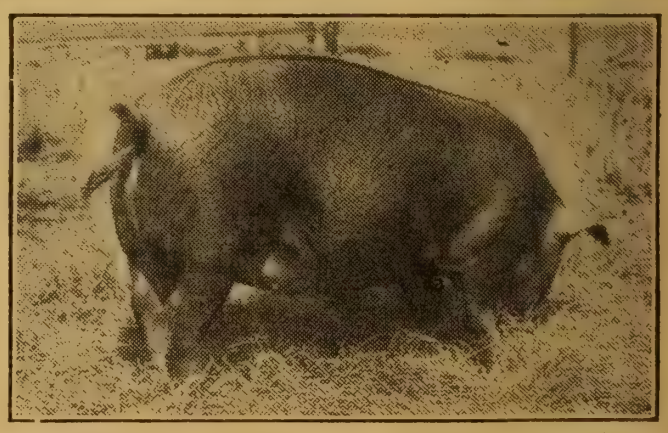
F. S. VANDERHYDE, West Concord, Minn.

I start the leading Minnesota Duroc circuit—go from my sale to the Owatonna sale, then Wilson and Swenson.

DUROCS

Will be sold at **OWATONNA, MINN.**

WEDNESDAY, JAN. 3, '17



45 HEAD—the tops of 5 herds. **Tried sows, yearlings, gilts. The "sifting committee" picked only the best from the 5 herds. You would expect good ones and we have them. Absolutely no culls. We want this sale to make a good reputation for us—will do our part. Sows bred to sons of King The Col., Tommy Doyle, Chief Defender's and A's Defender.** A sale worthy of your consideration. Our sale follows Vanderhyde's. Attend both if possible. Send bids to T. P. Shreve, Wisconsin Farmer representative. We want you with us. Col. H. S. Duncan, auctioneer. Write now for a catalog to

JOHN SWENSON'S ANNUAL
DUROC JERSEY SOW SALE
Willmar, Minn., Friday, January 5, 1917

50 HEAD 50

12 Tried Sows
5 Fall Yearlings
33 Spring Gilts

50 HEAD 50

REMEMBER

this is the only herd in the Northwest with two grand champion boars in service,

Big Wonder

Grand Champion of Iowa, 1913,

E. J.'s Crimson Wonder

Grand Champion Minnesota, 1916

11 TRIED sows by Big Wonder and Chief Defender, and one by Van's Crimson, that was first-prize under-year sow at Minnesota, 1915. Five fall yearlings sired by the Iowa champion, Big Wonder. Thirty-three spring gilts. Four granddaughters of King the Col. Fifteen by Big Wonder. Three by the grand champion, Prince Illustrator. Others of "purple" breeding. **Forty have been bred to the Minnesota champion, E. J.'s Crimson Wonder.** PLEASE NOTE—I picked this sale offering from 300 head and will say that there is not a poor one in the sale. Every tried sow is a good producer—not one with a spoiled udder. No breeder will have thirty-three better spring gilts, in breeding or individuality. **I am offering you the best I have—help yourself. "Where the best boars meet good sows."** I use this means to tender you a personal invitation to attend my sale. I want you to be my guest, whether you are a buyer or not. If it is impossible for you to get away, send your buying instructions to T. P. Shreve, field man for The Wisconsin Farmer. I'll guarantee his selection. If you could see the catalog you would, in a measure, appreciate the offering. If you'll write I'll mail you one. Col. H. S. Duncan, auctioneer. Mention The Wisconsin Farmer when writing.

SHORT-HORN CATTLE SHOW AND SALE

Under the Auspices of the

Minnesota Short-horn Breeders' Association

to be held at the stockyard's pavilion

South St. Paul, Minnesota

Wednesday, Jan. 3, 1917

ON JANUARY 3d the Minnesota Short-horn Breeders' Association will conduct at the South St. Paul Stockyards a combination Short-horn Cattle Show and Public Sale. Prominent members of the Association are contributing to this sale a very choice collection of breeding Short-horns, selected by a special committee for their quality. On the morning of the sale all of the cattle consigned will be judged by Prof. C. F. Curtiss, of the Iowa Agricultural College. This cattle show will be one of the most interesting live stock events ever held in the Northwest. The sale proper will begin at 1:30 p. m. The offering includes

70 High-Class Short-horns 70

About one-half of the offering will consist of bulls of serviceable age, the balance cows and heifers of extra quality. There will be straight Scotch cattle, Scotch-topped sorts, as well as consignments from famous herds of milking Short-horns. Whatever you want in Short-horns you will find at South St. Paul. The Minnesota Short-horn Breeders' Association is consigning only choice animals to this sale, selected by a special committee of the association and bearing health certificates from the state. Don't miss this great sale. Col. H. O. Tellier, Auctioneer. For further particulars and catalog write, mentioning The Wisconsin Farmer, the

Minnesota Short-horn Breeders' Association, P. S. Jordan, Sec'y
Morris, Minnesota

JERSEY CATTLE.

SHORT-HORN CATTLE.

WE WILL SELL YOUNG SHORT-HORN COWS

TO freshen in December. Several roans and reds, choice individuals and in calf to a Scotch bull. Write or come—they'll not disappoint you.

WILLIAMS BROS. BANGOR, WISCONSIN

USE A SHORT-HORN BULL

ARE you raising beef? A Short-horn bull will give you more scale and bone and more pounds of flesh for a given amount of feed than any other breed. Are you a dairyman? A Short-horn bull with milking ancestry will maintain your milk supply and will sire calves that will be quickly salable at a much higher price than you can hope for from a dairy bred bull. Are you a farmer? The Short-horn is the ideal for your purpose, because it is adapted to all conditions, of quiet temperament, takes on flesh readily, and yields a liberal flow of milk. The Short-horn always works improvement.

AMERICAN SHORT-HORN BREEDERS' ASS'N

HOLSTEIN-FRIESIAN CATTLE.

WHY YOU SHOULD BUY A BULL CALF FROM PABST STOCK FARM

Our stock is healthy, grown in open sheds under sanitary conditions. We are breeders, not dealers, and there is no opportunity for introducing disease into our herd.

You want the robust kind, full of vim and vitality. Our stock is that kind.

You want the best blood lines. Send for pedigrees of bull calves. They will prove our assertion that the breeding is second to none.

Our herd is large. Over 140 freshening this season. Gives you opportunity to select from a large number.

Last, but not least, we have the kind with splendid udders that make good at the pail.

Write Your Wants. We Can Please You.

PABST STOCK FARM

A PROVEN HOLSTEIN BULL FOR SALE

IN order to avoid inbreeding we offer for sale our great herd sire, King Artis Pontiac, born Jan. 25, 1911. His daughters have made records up to 20 pounds butter in 7 days at 2 years of age.

His two nearest dams averaged over 29 lbs. butter in 7 days and his sire's dam has a record of 31.7 lbs. butter in 7 days and 21,834 lbs. of milk and 1,076 lbs. butter in one year. Write for pedigree and photo.

Wisconsin Star Stock Farms **Ed M. Schultz, Hartford, Wis.**

Two Good Holstein Bulls Ready For Service

NO. 1—Born May 13, 1915, ¾ white, a good individual. His dam is a double bred Duchess Ormsby. Sire, a son of King Hengerveld Pondyke, that has two 30-pound daughters. PRICE $90.00.

No. 2—Born October 4, 1915. Over ½ white. His 14 nearest dams average over 27 lbs. butter in 7 days. Combines the blood of Johanna Bonheur Lyons and King Segis Pontiac. Send for extended pedigree. PRICE $200.00. We can spare a carload or less of high-grade Holstein heifers. Some sired by a 27-pound bull. Address **EDGEWOOD FARMS, PEWAUKEE, WISCONSIN**

2 Richly Bred Holstein Yearling Bulls

BOTH sired by **King Pietertje Hengerveld Ormsby,** a full brother to **Pietertje Maid Ormsby.** Both are out of daughters of **Sir Aaggie Ormsby.** One an A. R. O. cow making 17.50 pounds butter as a three year old. These bulls are of **Ormsby** breeding on both sides. Send for extended pedigrees and prices. **HUTCHINSON BROTHERS & BURBACH, RANDOLPH, WISCONSIN**

DODGE AND JEFFERSON COUNTIES

THE two greatest Holstein counties in Wisconsin. Holsteins from these two counties have made Wisconsin famous. You can buy the same kind of blood now. Our breeders can now supply you with both males and females of all ages. Write Francis Darcey, Watertown, Wisconsin, Secretary, Inter-County Holstein Breeders' Association.

YEARLING HOLSTEIN BULLS

READY for service and younger, sired by Johanna Chief DeKol, that is 62% the same blood as Johanna DeKol Van Beers, the 40-lb. cow. From official tested dams sired by a 30-lb. bull. I will also price a few heifer-calves. Prices reasonable. Edward O. Mueller, Appleton, Wis.

RIVERVALE FARM

OFFERS some fine Holstein bull calves, very light in color, from A. R. O. dams and granddams and sired by Korndyke Pontiac Piebe Burke, a grandson of Piebe DeKol Burke, at very reasonable prices. Address

Geo. H. Gibson **Nashotah, Wis.**

AT A REASONABLE PRICE

A SON of our noted herd sire, Cornucopia Pontiac Johanna 48355, that is by King of the Pontiacs (192 A. R. O. daughters) The bull for sale was born March 10, 1916. He is very well grown and of show ring conformation. His dam is an A. R. O. daughter of the 33-pound bull, Sir Pietertje Lyons Hengerveld. Send for extended pedigree—picture. Price very reasonable.

N. Dickinson & Son **Lake Geneva, Wis.**

REGISTERED HOLSTEIN BULL

AND heifer calves sired by Pabst Canary Pontiac Champion 142885, and out of well-bred heavy-producing cows. Call and see our herd or write

WM. FENNER, SHEBOYGAN FALLS, WIS.

VALLEY VIEW STOCK FARM

OFFER registered Holstein bulls 5 to 12 months old sired by a son of a 24.6-lb. cow, and out of good A.R.O. and untested dams. Price $55 to $75.

Wm. Buddenhagen & Son **Neillsville, Wis.**

HOLSTEIN

BULL calves, sired by Johanna Bonheur Pieter 113138, whose 14 nearest dams average over 27 pounds butter in 7 days, out of dams with 7 day and yearly records. C. Tochterman Jr., Monroe, Wisconsin.

REGISTERED

Holstein-Friesian Bull

AND heifer calves for sale. Write. Fries & Tulloch, Genoa, Wisconsin.

Maplewood HOLSTEINS

OFFERING 6 bulls of serviceable age, sired by **King Fobes Oak DeKol,** ¼ brother to Minnesota's first 36-lb. cow, and out of A. R. O. dams.

Write **R. C. Walker, Kilbourn, Wisconsin.**

HIGH grade Holstein heifer calves, well marked, sired by registered bulls and out of heavy producing cows, $18.00 crated. Registered bull calves for sale. Paul McFarland, Watertown, Wis.

High Grade Holstein

HEIFER calves, 15-16 pure from high producing dams, $18 crated. Also two bulls 11 and 9 mos. old from A. R. O. dams. Good individuals, nicely marked, 7-8 white. As we are short of room will price these right. Also bull calves. Send for pedigree and price. Mountain Ash Stock Farm, J. B. Cain, Glenbuelah, Wis.

FOUR REG. HOLSTEIN BULLS FOR SALE

TWO of them old enough for service. Sired by the 29-lb. bull, Fairmont Pietje Ormsby, whose dam is a sister to the 41-lb. cow, Sadie Vale Concordia 4th. Fine individuals and price reasonable. **L. Lindauer, Kaukauna, Wis.**

HOLSTEINS FOR SALE

MEQUON FARM offers Holstein bull calves sired by a 23-lb. grandson of King of the Pontiacs, out of high-testing cows, at very reasonable prices. One bull ready for service. Address

C. F. DINEEN, CEDARBURG, WISCONSIN

REG. Holstein Bull calves for sale. Sired by relatives of world's record cow, Dutchess Skylark Ormsby. I can save you 50% on the price of your next bull; write for chart. Mark W. Rich, Buffalo Lake, Minn.

RED POLLED CATTLE.

RED POLLS

YOUNG bulls for sale. My herd bull is a son of J. D. Diana 2d Proctor 23929. Write your wants. Address L. S. Underwood, Avoca, Wis.

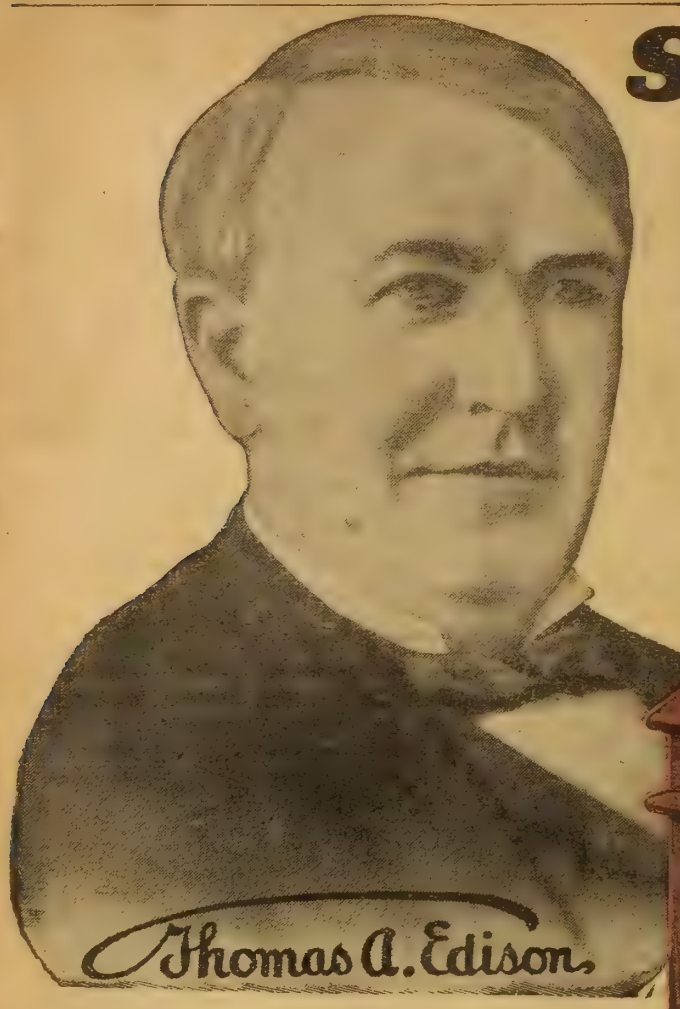
SEVERAL well-bred, registered bulls, to 9 months old, for sale at reasonable prices.

L. F. Biglow & Son **Brooklyn, Wis.**

Success for Mr. Edison

Life-Like Music At Last!

For years, the world's greatest inventor worked night and day to make the music of the phonograph true to life. At last he has been crowned with success. Just as he was the first to invent the phonograph, so is he the only one who has made phonograph music life-like. And now we make this great, rock-bottom offer on the genuine New Edison, the phonograph invented by Thomas A. Edison. Now that you can get *the best* on this wonderful offer, you need no longer be satisfied with anything less than Mr. Edison's great instrument. Just read below how easily you may have the genuine New Edison in your home.



Only $1.00 = and after trial!

Yes, we will send you the New Edison, the product of the world's greatest inventor's genius, the phonograph with the wonderful diamond stylus reproducer and your choice of the latest Diamond Amberol Records on *free trial without a penny down.* On this offer, you can now have the genuine Edison, the instrument which gives you real, life-like music, the finest and best of all phonographs at a small fraction of the price asked fo imitations of Mr. Edison's great instrument. *Seize this opportunity.* Send the coupon now for free catalog.

A Happy Home

Happiness is life—and real happiness is found only in a real home. And by a *real home* I do not mean a house with a yard or farm around it. Oh, no! A real home is the place where the happy and united family gather together for mutual enjoyment and recreation. And the Edison makes this possible, for it stands supreme as the greatest home entertainer. It will mean more than entertainment and merriment, more than an hour of amusement, yes, it will mean genuine pleasure of the lasting sort—helpful entertainment and culture of the most beneficial kind. It will mean the family united—a new home.

Entertain Your Friends

Get the New Edison in your home on free trial. Entertain your family and friends with the latest up-to-date song hits of the big cities. Laugh until your sides ache at the funniest of funny minstrel shows. Hear the grand old church hymns. Hear the crashing brass bands, the waltzes, the two-steps, the solos, the duets and quartettes. You will sit awe-striken at the wonderful grand operas as sung by the world's greatest singers. You will be moved by the tender, sweet harmony of quartettes singing those old melodies that you have heard all your life. Take your choice of any kind of entertainment. All on free trial. Then, after the trial, send the outfit back at our expense if you choose. Or keep it on our great rock-bottom offer. **Send the coupon today.**

Rock-Bottom Direct Offer—

If, after the free trial, you decide to keep Mr. Edison's superb new instrument, send us only $1. Pay the balance on easiest kind of monthly payments.

Think of it—a $1.00 payment, and a few dollars a month to get this wonderful new style outfit—Mr. Edison's great phonograph with the Diamond Stylus reproducer, all the musical results of the highest price outfits—the same Diamond Amberol Records—yes, the greatest value for $1.00 down balance on easiest monthly terms. Convince yourself—free trial first! No money down, no C. O. D., not one cent to pay unless you choose to keep the instrument. Send the coupon now full particulars.

THE WISCONSIN FARMER

VOL. XLV. NO. 52. THURSDAY, DECEMBER 28, 1916. WHOLE NO. 1822

Badger Farmers Had Good Year.

NINETEEN SIXTEEN has proven a bumper year for Wisconsin farmers. Prosperity is the central note in every section of the state. Blessed by a good average crop which is commanding splendid prices and an increased activity in all branches of farming, a retrospect at this season is one of pleasant recollection with the knowledge that 1917 will usher in a new year, resplendent with glowing prospects.

Crops have been good, though the yield in many cases fell below that of previous years, but the higher prices more than make up in the total cash receipts what was lost in yield. The live stock industry was never on a firmer footing, with the one exception of horses; the dairy products industry is in its glory with butter and cheese prices touching new high levels The Wisconsin banks are overflowing with cash, deposits being the largest in history: money is not only easier in tone but more plentiful, thus providing the means for greater development this coming spring. There is a heavy demand for everything the farm produces, at prices the best in years.

No review of the year in Wisconsin agriculture would be complete without special emphasis given the crop situation, the live stock industry and the dairy products industry. In the words of Commissioner C. P. Norgord, of the department of agriculture, "Nineteen sixteen has set new records for Wisconsin farmers. Nineteen seventeen gives promise at this season of being better." There exists every reason for the optimism for the future that prevails in all the agricultural sections of the state as well as in commercial and industrial lines. The passing year has set new paces; 1917 must follow with even greater successes.

Just one glance at the government's crop statistics on Wisconsin will set one to realizing the wealth of the Wisconsin farmer. In all the principal crops, excepting corn, the yields were lower than the year 1915, but the higher prices offset any loss that might come through decreased production. All 1916 estimates are preliminary, the government's final figures not being available until two weeks hence, but on good authority The Wisconsin Farmer is advised that the government reports will show big increases in the values of all crops and in live stock.

Corn this year yielded 62,640,000 bushels against 40,825,000 bushels in 1915. The farm value of corn on these figures was 90 cents this year against 70 cents last year. The yield per acre of thirty-six bushels was two bushels over the ten-year average. Wisconsin farms in 1916 yielded 81,141,000 bushels of oats, worth 47 cents, against 99,975,000 bushels last year, worth 33 cents. So the decreased production was offset by the increased price, but at that the oat yield of thirty-seven bushels per acre was four bushels better than the ten-year average. Hay, with 4,379,000 tons, worth $11 per ton, yielded a total income of close to $50,000,000 in 1916, against 4,508,000 tons, worth $9.50, in 1915. This yield was a third of a ton better than the ten-year average per acre and though a little smaller than in 1915 the total cash value is considerably greater. Barley this year yielded 20,670,000 bushels, against 23,288,000 bushels in 1915, and was two bushels better than the ten-year average, but barley now is worth $1.02, against 54 cents last year. Spring wheat yield this year was only 1,776,000 bushels, as compared with 2,362,000 bushels last year, but wheat is worth $1.55 at the time of that estimate, against 90 cents a year ago. So it goes with all the crops, with the result that these four principal grain crops, with hay, yielded Wisconsin farmers in 1916 a total farm value, by government estimates, of $160,000,000.

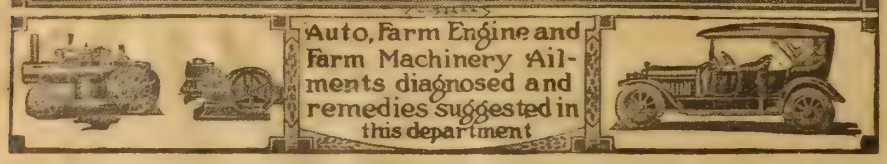
Tobacco and potatoes are important cash crops in Wisconsin and this has been an especially good tobacco year. The government's preliminary estimate shows a yield of 55,755,000 pounds, against 36,900,000 pounds last year. Last year tobacco had a farm value of only 6 cents, and, though statistics are not available yet for 1916, it is undoubtedly more than double last year, which places the 1916 tobacco crop as one of the most valuable in years. Potatoes are yielding Wisconsin farmers more money despite the fact that there was only about a 40 per cent harvest. The preliminary estimate is for 14,006,000 bushels, against 25,926,000 bushels last year, but the farm value this year was $1.38, against 40 cents at the same time last year. From a standpoint of yield it has been a very poor potato year with the 1916 yield only forty-seven bushels per acre, against a ten-year average of 102 bushels. "But every farmer would rather dig one bushel for the same money that two bushels would bring," remarked J. G. Milward, secretary of the Wisconsin Potato Growers' Association. The unfavorable season produced much tip burn, rot and other potato diseases, but those who sprayed and followed the advanced cultural methods were well repaid and the potato growers will enter the 1917 season with a far better idea of the value of such methods. During the year eighty-one growers produced certified seed. This was a decrease over the previous year, but was occasioned by more than forty growers voluntarily withdrawing from certification because of the poor season.

Fruits have suffered with potatoes, but there is the same lesson to be learned from 1916 experiences for the fruit grower as the potato grower. Wet weather in spring made it difficult to spray effectively. This resulted in much scab; the codling moth unmolested ruined the apples, with the result that the yield this year fell to 878,000 barrels, as compared with 1,473,000 barrels last year. The 1916 crop was only 56 per cent of a full crop, but the farm value of these apples this year was $3 per barrel, against $2.30 per barrel last year. These are the government figures. Much good fruit was produced, but only in the orchards that had the best care, and as Secretary Cranefield, of the state horticultural society, sized up the situation, "Nineteen sixteen has taught growers that those who succeed are the ones who spray; if washed off at night they spray again next morning and thus keep everlastingly at it." So 1917 will doubtless mean more spraying and better orchards. Other fruits suffered accordingly and hot weather hurt the gardeners. Cabbage and onions made splendid returns for many farmers. With these crops it was the old story of good individual yields in an off season with prices high and the up-to-the-minute farmer made the profit.

The live stock industry offers much to be proud of, as 1916 has seen an increase in all branches except horses. This has been especially true in sheep and beef. Dairying can always be depended upon to make its annual gains and the swine industry has taken a big jump with the increased price of pork. Eradication of the foot-and-mouth disease brought about a big stimulation in the cattle business and Mr.

(Continued on page 8.)

FARM MECHANICS



Questions and Answers.

The Wizard Spark Coil.

Please tell me where I can get new platinum points for a "Wizard" spark coil. I got this coil with an Olds gasoline engine some seven or eight years ago, but am not able to get the required points.

Answer.—We think that your coil was made by the Hercules Electric Co., of Indianapolis, Indiana. Write to them, describing your coil.

Oil For Cooling.

What is your opinion of oil, such as lubricating oil, for use in auto radiators? Water freezes so quickly in real cold weather; draining while out to parties or neighbors is very unhandy, and alcohol evaporates so quickly.

Answer.—We do not advise the use of oil for cooling. Oil soon ruins the hose and may not cool the motor enough, as oil does not absorb as much heat or radiate it as fast as water. Alcohol and water is the most popular anti-freeze mixture, about 50 per cent alcohol being commonly used. This mixture freezes at 15 degrees below zero.

The Magnetic Compass.

Please explain how a compass is made. Why does the needle always point to the north? Would it be possible for me to make a compass that would work satisfactorily?

Answer.—A compass is made of a magnetized needle of hardened steel, mounted so that it will turn freely on a pivot at the center of the needle. The needle is usually mounted in a small case with a glass cover. The case must be brass or some other material that cannot be magnetized. You might be able to make one. Obtain a heavy sewing needle about two inches long and magnetize it by rubbing it on a strong magnet. Paste the needle flat on a cardboard disk and support the disk so that it will balance on the point of a brass pin soldered in an upright position at the center of a brass case. A fiber case is just as good. Put an N on the cardboard near the end of the needle that points north; also mark the east, south and west positions on the disk. One end of any magnet is positive, the other negative; and the positive pole of one magnet attracts the negative pole of another. The earth is a hugh magnet with its poles nearly, but not quite, at the North and South poles. The positive pole of the earth attracts the negative pole of the magnet and the negative pole of the earth attracts the positive pole of the magnet. This force tends to swing the magnet into a north and south position. The needle does not point absolutely north, as the magnetic pole of the earth is not located exactly north. There are charts that give the exact direction the needle will point at various places on the earth.

Brake Bands Rub.

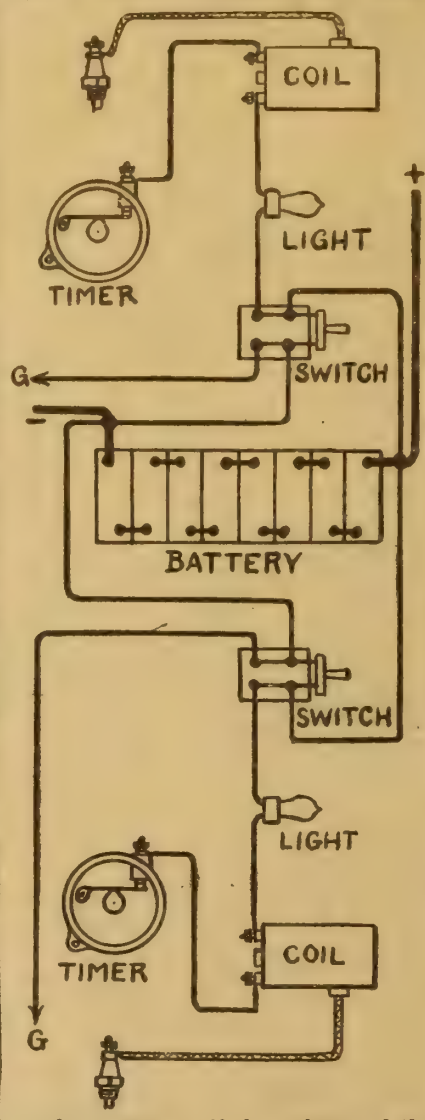
I have a new Ford car and have run it about four months. It has been giving me some trouble. I cannot speed it very high. There is a rubbing sound under the reverse brake, and a hissing sound in the right back wheel. I do not think that this wheel can be turned when it is raised off the ground. What can be the trouble?

Answer.—The brake bands in the transmission may be adjusted too tight. This overloads the motor and prevents the car from speeding up. The hub brake drum on the right rear wheel may also be rubbing. If so the drum will be hot after the car has gone some distance. There may be something wrong with the differential. Jack up both rear wheels off the floor at the same time. You should then be able to whirl the wheels easily by hand, the wheels turning in opposite directions. Lack of speed could be caused also by the high speed band or the clutch not being adjusted tight enough. You should send to the Ford Company for the Ford Manual, which explains very clearly how the transmission bands and clutch are adjusted.

Running Engine From Lighting System Battery.

Would like some information as to how to connect a gas engine to a storage battery. I have a thirty-two-volt electric lighting plant. The engine is jump spark. I also have another engine of the same make in a building away from the house. There are electric lights in the building. Would like to know how to connect this engine with the storage battery.

Answer.—We publish a complete wiring diagram of this outfit. The light is used for resistance and would



not be necessary if the voltage of the battery were less than twelve volts. Some coils are wound with high enough resistance to work all right even on thirty-two volts, but others would burn out unless a lamp or other resistance was used. The candle power of the lamp should be great enough to let enough current through to operate the coils. The heavy wires are the wires leading from the battery to the house lights, and the connections may be made anywhere along the line, not necessarily near the battery. Your second engine can, therefore, be connected to the light wires in the building.

Tractor Hitch For Two Binders.

How would be the best way to hitch two binders to a twelve-horse-power kerosene tractor?

Answer.—Special attachments are required, fitted to your make of binder. As a rule, these attachments would be difficult to make on the farm. It would be better for you to buy them direct from the maker of your binder, or from the dealer.

Electric Tail Light For Ford Car.

Please tell me how to wire for a tail light on a Model T Ford car. What voltage and candle-power bulb must I use?

Answer.—If your car is already equipped with electric headlights, solder a wire to the light wire running from the lighting switch to the first headlight. Run this wire to the tail light, and from the other terminal of the tail light run a wire to the frame and ground it, soldering the wire to the frame. If you have no electric lights on your car run a wire from the magneto terminal on the coil box to a lighting switch on the dash. Run a wire from the switch to the tail light and from the tail light to the frame and ground it. In either case use a two-candle-power lamp. Use a twelve-volt lamp unless you have trouble with them burning out. In this case it would be better to use a four-candle-power sixteen-volt lamp. In case you wish to use batteries instead of the magneto, wire the same as above, running the wire from the battery to the switch, from the switch to the lamp and ground one terminal of the lamp and one terminal of the battery. Four or six-volt lamps should be used for battery lighting.

Give our readers a chance to buy what you have for sale. Advertise it in THE FARMERS' MARKET. Six cents a word each insertion.

The Wisconsin Farmer

THURSDAY, DECEMBER 28, 1916.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

SHALL WE HAVE PEACE?

I AM in receipt of a letter from a farmer living near Rio, Wisconsin, who does me the honor to compliment my writings and to ask my opinion on a most vital topic. Let me quote a portion of his letter:

I have known you, through your writings, for the last two years and I do not think I shall be able to invest a dollar to better advantage than to take your splendid paper another year. I feel that your editorials alone are worth the price; believe me, I am honest about this. When I honestly appreciate anything and think it is worthy of praise I am not afraid or backward about saying so. I want to say that I enjoy your paper and so do my two sons, who are farmers and farming with me. We enjoy everything in it, especially the editorials.

Now, in regard to the great conflict in Europe you stand on entirely neutral ground. So do I, still I am free to express my views; and my views are that on the whole Germany is acting as honorably in this controversy as its enemies are. The majority of this neighborhood is against me on this point, however. How glad I would be if I could only get your views on the rights of the United States to put an embargo on arms, ammunitions and foodstuffs. Also your views on the proposal made by Germany for peace, whether it is proposing it for some selfish purpose or if it is honest in its expression that the shedding of blood has been carried on enough. I hope you will see your way clear to give us some enlightenment on these great questions.

As my correspondent intimates, I have endeavored to maintain strict neutrality throughout the entire great war. President Wilson asked us all to do this, at the beginning of hostilities, and most of us here in the grain belt have done as he requested. Still, there are some things upon which I feel so deeply that I would be derelict to my duty if I were not to speak plainly and emphatically, and it is no breach of neutrality or good faith to speak out. Here are my views, as briefly as I can give them:

If I had the power I would place an embargo upon arms and ammunition this very day. I would never place an embargo upon foodstuffs, so long as our production exceeded our actual home demands. I would compel the warring nations to arbitrate their differences at once and get the men out of the trenches (never to return again) before Christmas. This is what I would do had I the power.

None of us here know the honesty of intentions which prompts Germany to propose peace at the present time. We can only hope for the best, giving her the benefit of the doubt. Someone must make the first overtures; why not Germany? Having proposed peace (whether at the cost of pride humbled or not, it is not for us to question, in view of the great end to be sought) the other nations owe it to themselves, to the world and to posterity to give the proposal due consideration, not to dismiss it hastily or angrily or with bragging insinuations of what they will do "when they get good and ready." I wonder how many of you have seen the message which Wm. J. Bryan, our foremost pacifist, sent to Lloyd George, the new British premier, in regard to Germany's peace proposals? Here it is:

As a friend of the nations at war, as a Christian and a lover of humanity, I respectfully but most earnestly appeal to you to use your great influence to secure your government's consent to negotiations.

There is no dispute that must necessarily be settled by force. All international disputes are capable of adjustment by peaceful means. Every guarantee that can possibly be secured by war can be stated as a condition precedent to peace.

Do not, I pray you, by refusing an exchange of views, assume responsibility for a continuation of the unspeakable horrors of this unparalleled conflict. Your decision may mean life or death to millions.

What was Lloyd George's reply? He stood up before his fellowmen and quoted Abraham Lincoln, than whom a greater lover of peace never lived, as authority for the war continuing, using Lincoln's words thus:

We accepted this war for an object, and a world object, and the war will end when the object is attained under God. I hope it will never end until that time.

Tell me, my friends, what principles are at stake in the struggle in Europe which justify Lincoln's words being used against Lincoln's principles at this time? What can be laid in the balance to outweigh the lives of millions upon millions of men, the heartbreak and tears of millions upon millions of women and little children? There is an unutterable sadness about the holiday season to me this year, because the war continues. What does it matter what actuated Germany to propose peace; could anything be more desirable than that Christ should walk between the trenches and the men should throw down their guns at sight of Him, and wives and mothers should be made glad and heart-whole, and little children should sing again for joy, and all the world should rejoice, because war has been banished from our midst, and the sun should come up in its splendor on fields no longer harrowed by shot and shell but by the tools of the husbandman? Let us have peace, I say, no matter who proposes it; to place a stumbling block before it is a crime against all mankind.

"AMERICA" ON REQUEST.

I WANT to repeat my offer to send printed slips containing all four stanzas of "My Country, 'Tis of Thee" to any subscriber who will express the wish to have them. At this season of the year, what could be more appropriate than to conclude our public exercises with the stirring words of "America"? There is a possibility that peace may be restored in Europe in the near future. Should not all of us join in singing our national hymn, with greater fervor than ever before, making the welkin ring with the inspiring words:

Our fathers' God, to Thee,
Author of liberty,
To Thee we sing.
Long may our land be bright
With freedom's holy light,
Protect us by Thy might,
Great God, our King.

I have had these slips printed for your convenience. All you have to do is to send me your name, your address, and the number desired and I will send them to you without delay and without a cent of expense to you. I am only too glad to do this for you.

A NEW YEAR MESSAGE.

I LIKE to think of all of you as sitting down some time around the close of the year to take stock of how the world has treated you since last New Year's Day. Not that I believe in living in the past too much, but I do believe in looking back, now and then, at the last milestone to be sure we are advancing and to reckon the pace at which we are traveling.

Some of us have had a better year this time than others; that is inevitable. "One man's meat is another's poison," the old saying goes. Some go in for dry farming, and others come to ruin through drouth. So it goes. But have not all of us at least some one thing for which to be more than usually thankful as this year comes to a close? Do we always realize how well off we are? I never yet passed a cripple or a blind man but I thanked God that he had let me come to a ripe old age, strong of limb and enjoying good health. Compared to physical and mental vigor, and the companionship of loved ones in the family circle, what is all the wealth of Morgan and Rockefeller?

This thought was borne upon me most strongly by a letter which I received a short time ago and which I purposely held over until now, to give it to you as a sort of New Year's message. Perhaps, if you had read the letter in the original, just as it came to me, you would have thought, "How can a New Year message ever be made out of this?" for there were many misspelled words, many grammatical mistakes, many peculiar phrases. But the big idea was there, and nothing like a few mistakes in writing could hide it. The big idea was just this: We all of us have something to be thankful for, though it may seem small at times.

I am going to print this letter with just enough corrections of spelling and phraseology to convey the man's thought to all of you, so that not a particle of it may be lost. I do not want your mind to be the least bit distracted by grammatical mistakes and the like. What I want is for you to see this great-hearted immigrant farmer, in his northern Wisconsin home, writing me this personal letter out of the fullness of his heart, shaming us all when we dare to cry or complain because we do not have all of the world's goods we crave. Listen to this; it is my New Year's message to you, written by a Holland farmer who came to this country but seven years ago and whose way has been hard, very hard:

About a year ago, things looked pretty dark to me and my dear beloved woman and little ones. The early frost took all my corn and potatoes, there was nothing for us to live on and the mortgage on our little place was about to be foreclosed. There were a lot of bills and notes due, as is usually the case when things go wrong. We had worked hard, worried much and suffered lots, and we believe if it had not been for your encouragement and the articles in your paper we would have felt almost like giving up. But we (my wife and I) took chances. We put a mortgage on almost everything we had that was worth anything at all, in order to secure about $400 to pay a little here and a little there so as to keep up our credit and to show our good and honest intentions. Then we read your letters about Christmas, sometimes with tears in our eyes. We honestly and faithfully prayed the little Christ Child to give us courage and strength to try another year, and, thank the good Lord, this year it looks a whole lot better.

The first good luck we had was on the 22d of February. The stork brought us a good, big, healthy baby boy on George Washington's birthday and we named him after George Washington. That same night when I came home from the doctor I put my team in the barn, and there was a nice young heifer calf jumping and kicking through the barn. I honestly felt so glad and happy that day that I took the calf in my arms and took it into the house to show my woman, who was in bed. Everything turned out as well as we could wish for.

Then the third day of March a certain person came to our place and asked us how we were getting along with our farm and how we stood with the real estate man from whom we bought. I told him as well as I could how things were with us. It was always the same story—I had so many expenses and I did not have a dollar in the house. Then he says, "I know you and your woman so well that I know you are too honest to try to beat anybody and I feel sorry for you and for your family. If there is any way of going after that man I will give you the money to pay for your farm on 5 per cent interest." Five days after that everything was all right, and now we have a good, clear title.

When the spring opened the cows and heifers came fresh and everything was in our favor. We get a nice little cream check so that we are able to pay off very little by very little, but every little helps.

Then about August and September I began to read in your paper about this fair and that fair, until I was pretty near all fair myself and my woman laughed sometimes about my ideas about fairs and cattle and things. She laughed and said, "You are a farmer that can't buy a pitchfork, let alone doing these things." But about the middle of September our county fair was held and they allow pure-bred and grade cattle. I had a nice bunch of well-built and good-looking grade stock heifers and cows from pure-bred bulls and your paper made me so crazy that I had the nerve to take some of them to the show grounds. Best of all, I had keen competition and still I got two blue ribbons and one red one, that is, two firsts and one second premium. Believe me, dear friend Mr. James M. Pierce, that was a time. I promised my woman and little children that if papa got the premiums he would go to the butcher shop and buy a good chunk of fresh meat—and that was something we had not had for a couple of years. Believe me, we had a good time for a couple of days.

Now we have a nice little farm on a good road, with R. F. D., telephone line, only a mile and a quarter from the railroad, lumber yard, pickle factory, and about a mile and a half from the Catholic church and Catholic school. We are both Catholics and our oldest little girl is about five years old and goes to school every day. We have very kind and honest Sisters who teach school, and it don't make any difference to which church you go, all are very, very welcome at our school. We have Catholics and non-Catholics, Indians and white people—all sorts and conditions—but parents are all well satisfied.

But I think I must close. I wish I could talk with you once because I feel so good. I still have all kinds of notes, bills and debts to pay, but it is coming slowly. I have got so far that if I need a little money I go to either one of the banks and they help me on my note. Excuse me for bothering you so long with this letter. I have only been seven or eight years in this country and it may be hard for you to read, but if you can pick anything out of it that is worth a little room in your paper I would like to read it and give other poor, hard-working farmers a little courage, because all farmers cannot ride in automobiles. Some of them are happy with a wooden wheelbarrow.

My friends, I am not going to attempt to add anything to this message, written for you by this humble but thankful immigrant farmer. He wrote far better than I can write; you can feel his heartbeat in every word, see the sparkle of his honest eyes in every sentence, see the whole big-hearted man in every paragraph. There is a proverb in the land from which he came which says, "Better whole than patched with gold." This man is a whole man; his patches are not of gold, but of human sympathy and loving kindness and simple heartedness and honest thankfulness. I take off my hat to this man. I hope some day to cross the threshold of his humble home and shake his hand. I would rather meet him there, in his little home, than to dine at the White House.

Take this man's New Year's message home to yourself, each and every one of you. If the birth of a heifer calf can make bright a dark day to one man, who has suffered so much, how many, many blessings has the old year brought to you, to make you thankful? Shame on those who cry over that which they failed to win and ignore that which they have won. There is a new year dawning now in a few days. Shall we all of us strive to follow the example of the farmer from over the seas, make the best of everything, see the rainbow shining through the storm clouds and thank God for the many blessings he has given us even when he chasteneth us most?

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue
Des Moines, Iowa

201 Washington Bldg.
Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION. MEMBER OF AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance. $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

The Greatest Value That Comes to the Farm.

The cheapest good thing that comes to the farm is the reliable farm paper. All around us we hear of big advances in prices of almost everything we have to buy, and yet the farm paper is the same price. If properly read and its contents given serious thought, the farm paper, at its present price, is so cheap that no farmer can afford to be without it. There is considerable talk of advance in prices of farm papers, but The Wisconsin Farmer has not yet considered a request for a higher price from its readers.

The renewals and complimentary letters accompanying, which pour into the office of The Wisconsin Farmer, are sufficient evidence to us that this paper is well thought of in the homes of its readers. And it is our highest ambition that The Wisconsin Farmer shall be received each week with favor and appreciation, and that we may be able to accomplish some good.

In a sense the newspaper is a practical example of working out the theories of co-operation. If we should have only a hundred subscribers to The Wisconsin Farmer, the publisher would lose thousands upon thousands of dollars each year on the publication. It is only by clubbing together, working in co-operation as it were, that we are able to gather together a large family of readers, and offer such a good paper at so low a price.

Every reader realizes that his best chance for advancement in his farm work lies in brushing up against others who have made a success and getting hold of new ideas. But it is not possible for every reader of The Wisconsin Farmer to get around over the country and brush up against hundreds of farmers, scientists, students, etc. He must employ someone to do this work for him, and he does this when he purchases a subscription to a good farm paper like The Wisconsin Farmer. Editors of The Wisconsin Farmer devote their entire energies to studying farm conditions and collecting farm experiences. They have access to the best thought along agricultural lines. They spend a large amount of time on the road, at stock farms, grain farms, experiment farms, etc., and their sole object is to gather valuable information for the readers of this paper. If a farmer were to employ individually a man to go out and gather this information for him, he would have to spend several thousand dollars a year, including salary and traveling expenses, and then he would get the services of only one man. If he employed ten or a dozen men to work for him along this line, think how many thousands of dollars he would have to spend. These men get this information and relate it through the columns of The Wisconsin Farmer. They are careful in preparation of the matter. They confer among themselves, and they get pictures and drawings to illustrate their points. And we concentrate the best of all this information, boiled down into good readable style, for the benefit of our readers at only a dollar a year.

Send in your renewal today, and take advantage of the service which this organization is able to give. The facilities at the disposal of The Wisconsin Farmer cannot be excelled by any agricultural publication in the whole country. Prompt renewal of subscriptions means that not a single issue will be missed. In handling so many thousands of subscriptions a few weeks later, we are not always able to get the renewal on the list the same week it is received, so we urge prompt renewal. It will be a favor to the publisher if you will recommend The Wisconsin Farmer to your neighbors who are not already subscribers.

Wisconsin Corn Contest.

Jackson county, Wisconsin, produced some good corn this year, and one of the most successful corn contests in the state was put on there under the direction and with the support of the Jackson County Bank, of Black River Falls. On page 6 of this issue will be found a picture of a portion of the exhibits in this contest, which was closed November 4th last. This picture we reproduce through the courtesy of John H. Mills, cashier of the bank mentioned.

There were sixty-eight entries all told in this contest and the corn was well arranged, as shown in the picture referred to. The exhibits will be on display at the bank until after the first of the year.

A. H. Wright, of the agronomy department, Wisconsin College of Agriculture, judged this contest and gave a very interesting and practical address on the general subject of corn raising. As the address had been widely advertised there was a splendid audience of interested farmers, and we have no doubt this good work on the part of the bank, in connection with the college of agriculture, will stimulate corn growing in Jackson county. Those who go through Black River Falls, Jackson county, by rail, will see a rather rugged country and will perhaps remember that not many years ago this town was amost wiped off the map by a flood. Back away from the rough ground along the Black river is some well-developed farming country, the soil being rich and productive. The contest conducted by the Jackson County Bank has proved to farmers of the country what can be done in the way of raising corn, if the proper seed varieties are selected and proper cultivation methods used. The officials of the Jackson County Bank are to be congratulated upon the success of this contest and the farmers are to be commended for taking such general interest in the subject of "more and better corn for Jackson county." The Wisconsin Farmer was privileged to give a silver loving cup as one of the prizes in this successful contest.

Selection and Treatment of Bulls.

When it is a well-known fact that the dairy bull is the foundation of all successful dairying, it seems strange that so many dairymen remain indifferent in the selection of bulls. A herd will improve or deteriorate accordingly as the dairyman selects a good bull or an inferior bull, so that what appears a saving in the original purchase is but a trifle compared with what a real good bull can do in improving the milking qualities of a herd. It was along these lines that Mr. John Michels, of Peebles, Fond du Lac county, talked at the recent meeting of the Wisconsin Dairymen's Association. His experience in handling we are quoting from his address, as in this one thing so many dairymen, even with good sires, fall down:

During the first year of his life, there is no better place for a bull than a good pasture in summer and a box stall in the barn in the winter. This will supply a maximum of fresh air, sunshine and exercise so needful to a young animal. The bull should also be taught at this time to lead with a halter as well as get used to a stanchion. At one year old, a ring is placed in his nose and the bull taught to lead by his ring.

After he is one year old, there is nothing safer, more convenient and generally more useful in the handling of a bull than a properly constructed bull run with breeding pen adjoining. The bull run is fifty feet square which is large enough to provide the necessary exercise. Some shade must be provided. In my own bull pen, I have a number of large trees and running water, which makes conditions about ideal as regards shade and water.

The breeding pen has a total length of sixteen and one-half feet and is three and one-half feet wide in front and four and one-half feet at the rear end. When a cow is to be bred she is tied in the stanchion, the bull pen gate opened, and the bull allowed to run into the breeding pen. Opening the bull pen gate closes the breeding pen, thus making it impossible for the bull to get out. A breeding pen not only makes breeding cows an absolutely safe matter, but also saves a great deal of labor.

Special attention is called to the stanchion in the breeding pen. I have found it one of the best places in which to hold the bull when it is desired to disinfect him. In addition to securing him in the stanchion, I also tie him to the front of the manger by means of a rope in his ring. The bull is never tied except when he is being disinfected and when his pen is being cleaned out. The best place for a bull in the winter is a box stall in the cow barn where the bull is in sight of the cows.

One of the greatest losses suffered in the dairy business is the killing of bulls before they have been able to prove their value. The final test of the value of a bull is his offspring and no bull should be disposed of until he has offspring in milk. The reason so many bulls are killed when young is the fear that they will become too unruly to handle. With a bull pen like the one described, it matters not how vicious a bull may become, he can always be handled with absolute safety.

Frequently we see bulls at large in pastures. Mr. Michels condemns this practice in strong terms. It wastes the energy of the animal, is dangerous to attendants and the public and when running with heifers they are often served too young. Frequently we see children riding bulls. This is also a treacherous form of amusement and however gentle a bull may seem it should always be remembered that he is a bull and should be treated as such at all times.

Problems For Wisconsin Fruit Growers.

If ever Wisconsin fruit growers had a stiff program of work outlined for them it was done at the recent state meeting of the Wisconsin State Horticultural society by Prof. J. G. Moore, of Madison, department of horticulture, college of agriculture. Mr. Moore came out boldly and declared that Wisconsin horticulture's greatest needs are better apples and more honest packing. He accused the Wisconsin growers of the very criticisms they had made previously at the same convention of growers in Illinois, Michigan and New York. It is a long task, Mr. Moore said, but the big duty of progressive fruit growers during the coming ten or twenty years in Wisconsin is to improve the quality first and then build up a reputation for honesty in marketing that will stand for all time.

No business ever succeeded on dishonest lines. The same holds true with the fruit business. Certainly there are good apples in Wisconsin and there are fruit growers who are as honest as the day is long, but unfortunately they must suffer for the sins of others. The man who puts his fancy apples on top of the barrel and sells them for fancy apples with culls in the middle may fool the buyers for a time, but in the end he will suffer. That also applies to the grower of small fruits, the potato growers, grain growers; in fact, it applies to every man who has something to sell. Every product should come up to expectations and Mr. Moore said that many growers who had censured the commission man were often wrong—that it was the commission man who was right in detecting the culls in the packs. Mr. Moore's indictment of the fruit growers was undoubtedly with the purpose of rousing them to greater ideals and a greater industry rather than with the idea of discouragement. Sometimes the truth cuts, but then sometimes it is only the truth that can right conditions. The man who is packing fruits dishonestly knows it—if the shoe fits he may wear it, but it is unfortunate that those who are working for a reputation should suffer from the actions of the unscrupulous. Packing and grading laws as suggested might improve conditions, but the fact remains that it is something the fruit growers themselves must take into their own hands and work for the common good.

Mr. Frederic Cranefield, secretary, in approving Mr. Moore's general indictment, pledged the support of the society to better fruit and more honesty and this brought on considerable discussion as to the reason for conditions. The farm orchard was attacked. Mr. Cranefield holds it is a menace to the fruit industry. It must not be understood he opposes the home orchard. In fact, he thinks every farmer should have a home orchard—one just large enough to supply his home needs and one which he can look after properly with his other farm duties. The farm orchard he attacks is the one too large to be given necessary care and too small to make it worth while to employ caretakers or neglect other farm work for it. This situation, he says, provides a market for the fruit buyer—the fellow who scours the state for apples and takes culls and whatever is offered and sends them to the market as select Wisconsin apples. This buyer is a free lance—he has no reputation to maintain. There are many similar problems confronting the commercial fruit growers, but these serve to indicate the importance of the work ahead.

Co-operative marketing and clearing associations was suggested by Mr. Moore as one method of raising Wisconsin reputation in fruit marketing. These associations could do their own packing and grading and turn the culls to cider. Inquiries which are made by outside buyers each year indicate they would be glad to buy in large quantities from such associations. Mr. House has given the fruit growers something to think about and, though he may have overreached himself to some degree, some splendid good should be the result.

Farmers' Packing Plant in Minnesota.

An event of unusual importance to the farmers of southern Minnesota occurred at Faribault recently, when the new Faribault Packing & Provision Company plant was dedicated. One thousand farmers interested in the concern gathered in the cooling room of the new $172,000 plant where they were banqueted and toasted by a number of prominent speakers. There are more than 1,000 stockholders in the new plant, holding $400,000 in stock, and the subscribers are almost all farmers. Eventually they expect to make a $500,000 investment in this property. The building dedicated with such ceremony will be opened for business January 2d. An interesting feature of the stock sale was the fact that business men of Faribault guaranteed to pay the overhead cost of obtaining the necessary funds to open up such a plant. The new plant has a daily capacity of 1,000 hogs and 100 cattle, and the stockholders will be able to furnish a large portion of the animals slaughtered. There are seven buildings all erected after the latest plans for packing house construction It is planned to treble the capacity of the plant in the near future if the venture is successful. While there is no aim to make this a literally co-operative institution, the stockholders are pledged to stand together for the best interests of the concern, and with the considerable amount which they have invested it seems they will be likely to do this. In an address at the banquet Dean A. F. Woods, of the Minnesota College of Agriculture, said, "You will succeed if you stand together and stick to it." Dean Woods also said that the success of this plant and similar plants which are being organized throughout the country will mean that consumer and producer will be brought closer together. If this can be effectually accomplished it is expected to mean bigger profits to the producer and smaller cost to the consumer. Minnesota state officials were in attendance at the dedication and representative citizens from points in the state delivered short addresses.

Inasmuch as New Richmond, La Crosse, Wausau and Madison, Wisconsin, either have similar plants or are selling stock for the purpose of erecting the same, the Faribault experiment will be watched with keen interest. The La Crosse plant has not been a success under farmer ownership. The plant has been closed down until the annual meeting of the stockholders January 10th. A. W. Johnson, secretary of the Farmers' Co-operative Company, of La Crosse, advises The Wisconsin Farmer that the company was able to make a small profit the first of the year when hogs were sell-

ing cow, but that when the market advanced the company did not have sufficient capital to handle the business. Mr. Johnson says that the plant may reasonably be valued at $50,000, which is about 20 per cent of the outstanding stock. Efforts to reorganize failed because not enough of the stockholders would attend a meeting or vote on the proposition by mail. At the annual meeting January 10, 1917, some disposition of the business may be made. The officials say that they ought to be able to make money if they could have sufficient working capital. It will remain for the stockholders either to arrange for the continued operation of the plant on an agreed basis, or sell the plant and divide the proceeds. If a majority of the stockholders do not attend the annual meeting it will be a difficult matter for the directors to handle, and Mr. Johnson advises us that it might be necessary to resort to the courts. Those most interested, however, hope for some happier solution of the problem. If the string of farmers' packing houses could be operated successfully it would no doubt protect the farmers' market, and at the same time give the stockholders an opportunity to participate in the supposed big profits of packing. One difficulty seems to be to get a united action of any kind on the part of so many stockholders. Successful managers of packing plants are also scarce, and good berths with higher salaries than struggling concerns want to pay, are awaiting such managers. No one wants to discourage the farmer in his efforts to better market his farm products.

The Mechanical Milker.

A rather comprehensive study of the labor cost of handling dairy herds of from fifteen to fifty cows with and without the use of milking machines has recently been completed by the office of farm management of the U. S. Department of Agriculture. In this study 109 New York dairy farms, fifty-six of which used mechanical milkers, and 160 Ohio, Michigan and Illinois dairy farms, 100 of which employed milking machines, were visited and data gathered direct from the farmers themselves. The conclusions reached, therefore, may be said to be the average opinion of 269 practical dairymen, of whom 156 used mechanical milkers and 113 milked by hand.

In general, the facts that this investigation brought out may be stated as follows: That the larger the herd the more advantageous the use of the mechanical milker proved; that the average time required to milk a herd of fifteen cows or less by hand was seven minutes per cow and five minutes by machine; that in herds of fifty cows or more hand milking required slightly less than seven minutes per cow and machine milking 4.15 minutes. Thus the average cost of hand milking in small herds was $10.91 per cow per year and in large herds $10.45. Mechanical milking in small herds, including interest on the investment in the necessary machinery, depreciation, etc., amounted to $11.77 per cow per year and in large herds the cost was reduced to $7.34 per cow per year. These figures bring out clearly the well-known fact that the size of a dairy herd does not materially reduce the cost of hand milking and that the mechanical milker can be more economically used in herds ranging from thirty to fifty cows in size than in those ranging from ten to twenty.

While machine milking cost more per cow in a small herd than hand milking, it does not necessarily follow that one shouldn't use a mechanical milker in herds of fifteen cows or less, but rather that this should be determined by each individual farmer himself. For, notwithstanding that machine milking may cost slightly more per cow in a small herd, time and labor are saved, and in many instances the saving of labor, which is usually hard to get, is an important item. These studies also brought out clearly the fact that one man can handle more cows with a mechanical milker than he can if obliged to milk by hand—a matter of considerable importance on small farms where the owner wishes to avoid employing hired labor, except during rush times in the harvest season.

The average cost per cow per year of machine milking, in herds of thirty to fifty cows, was found to be as follows: Interest on the investment, 61 cents; gas and oil for running the engine, 84 cents; repairs, 25 cents; depreciation, $1.49; labor, $6.03—total $9.22. Hand milking the same size herds cost $10.11 per cow per year. Interest on the investment will, of course, vary with the cost of the machine employed. The depreciation charge made was based upon the assumption that a milking machine and engine will last about twelve years; in other words, a depreciation charge of 8 per cent was made.

Every dairyman visited who used a mechanical milker—156 in all—was asked whether, in his opinion, the milker had in any way influenced the production of his herd. To this 124 answered that they had observed no difference in yield, while sixteen said the milker had slightly increased the flow and sixteen claimed that it had slightly diminished the amount of milk. This would indicate that the man who handles a milking machine with reasonable intelligence and care need not fear a reduction in the yield of milk. In a similar manner it was shown that there is no danger of the machine producing sore teats, garget, or other udder troubles.

Index of Articles Published in 1916.

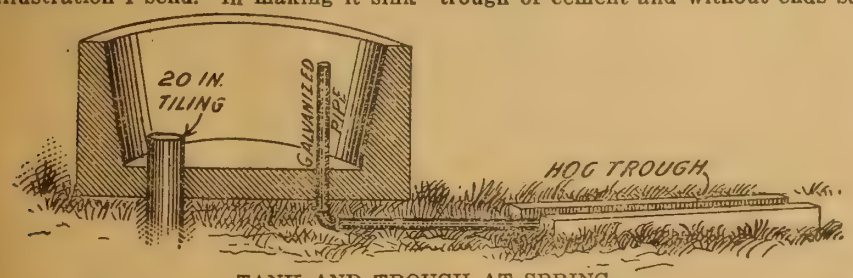
The Wisconsin Farmer has issued an index of all articles published in this paper during the year 1916. Copies of this index will be furnished free to any subscriber who will drop us a letter or postal card and ask for the same. This index will be found of great value by those who have been keeping a file of their papers, or expect to have such file bound. To secure your copy of the 1916 index, write to The Wisconsin Farmer at once before the supply is exhausted.

Watering Place and Spring.

H. A. Caldwell, Minnehaha County, South Dakota.

IN YOUR paper I saw where James B. Wood, of Morgan county, Illinois, wanted a description of a watering place over a spring.

A year ago I fixed a watering place over a flowing spring the same as the illustration I send. In making it sink one or one and one-fourth inch galvanized pipe down through the tank just under the surface or on top of the ground as you want it. Then run a piece of the pipe out to where you want your hog trough. Make the hog trough of cement and without ends so



TANK AND TROUGH AT SPRING.

a piece of tiling in the spring the size you want (if the spring flows strong, a twenty-inch tile), then make your cement tank around it (either round or square) and for the overflow put in a the water will flow through it and be clean for the hogs to drink. When the tank is finished bank around it so it will be dry. This will not be very expensive either.

Corn and Alfalfa Experiments.

Manager of the Wisconsin Industrial Farm at Waukesha Gives the Results of Some Interesting Tests Which He Has Made.

DURING the past year Mr. J. T. Hill, manager of the Wisconsin Industrial School Farms at Waukesha, Waukesha county, has been conducting corn and alfalfa experiments, the results of which are quite forcibly shown by the accompanying illustrations. The added value of using only tested, standard varieties of seed corn should be common knowledge to every farmer, but unfortunately there are many still following the old methods. Mr. Hill's experiment with Wisconsin No. 7 shows very conclusively the value of good seed, as Wisconsin No. 7 tested seed yielded forty-five bushels as compared with five bushels of ordinary crib-selected and untested corn. The same amount of seed was sown on adjoining plots of equal size with similar soil conditions and cultural care. The illustration speaks for itself. Much of the untested seed failed to germinate; that which ripened was of poor quality, all in great contrast to Wisconsin No. 7.

Wisconsin No. 7 tested seed corn yield compared with common, bin selected, untested seed.

The alfalfa experiments brought out the value of seeding without a nurse crop. The same plan was followed on similar sized plots and on similar soils. One was seeded without a nurse crop and was more than knee high when the accompanying picture was taken. One was seeded with a nurse crop and was partly crowded out by the nurse crop. On the same day the one seeded with a nurse crop was not half so high and the stand very thin as compared with the other plot.

There has been much discussion in Wisconsin in recent years relative to seeding alfalfa with and without nurse crops. This experiment, as well as others, tends to show that the best results come when alfalfa is seeded alone, provided soil conditions are right. This is especially true of the first seeding. The soil is preferably plowed in the fall and limed if necessary. In the spring the land is disked and harrowed often enough up to about the first of June or July so as to get all the weeds out of the way. The soil is then inoculated and the alfalfa seeded at not less than twenty pounds to the acre. If the season is favorable the first crop may be secured before the first week in September.

Seeding without a nurse crop is rather costly as far as labor is concerned, but for the beginner it is the surest method. On fields which have grown alfalfa good results are secured by seeding alfalfa with a nurse crop, such as barley or oats. A thick seeding of oats or barley have choked out many otherwise successful alfalfa crops and precautions must be observed. Not over one bushel of alfalfa should be sown and if with oats they should be cut for hay when in the milk stage. The nurse crop requires less labor and trouble.

ALFALFA WITHOUT THE NURSE CROP.

ALFALFA SEEDED WITH NURSE CROP. SOWN AT SAME TIME AND PICTURE TAKEN AT SAME TIME AS ACCOMPANYING PICTURE.

Farmers in Badger Legislature.

A TABLE recently compiled shows that there are thirty-four farmers in the Wisconsin legislature this year, thirty-two in the lower house and two in the senate. Other businesses and professions represented in the legislature this year and the number include thirteen attorneys, thirteen merchants, ten mechanics, nine real estate men, seven retired, seven bankers, six contractors, four lumbermen, four liquor dealers, five publishers, four manufacturers, three druggists, two hotel keepers, two physicians, two public officials, two salesmen, one clergyman, one clerk, one jeweler, one civil engineer, one accountant, one laborer and one who does not give any occupation. The assembly is made up of seventy-nine republicans, fourteen democrats and seven socialists. The political complexion of the senate is twenty-three republicans, seven democrats and three socialists.

Fair Officers Elected.

Wilbur Ross was re-elected president of the Douglas County Fair Association at the recent annual meeting. Other officers are: W. McCullough, vice president; T. J. Roth, treasurer, and F. E. Spring, secretary. The receipts of the last fair were $26,720.20 and the expenditures $26,425.79.

In and Around Wisconsin

COMING EVENTS.

Winter Course Wisconsin Dairy School, Madison, Wis., November 8th to February 1st.

Wisconsin Poultry Association Show, at Madison, January 1s to 5th.

Automobile Show, Milwaukee,. Wis., January 5th to 11th.

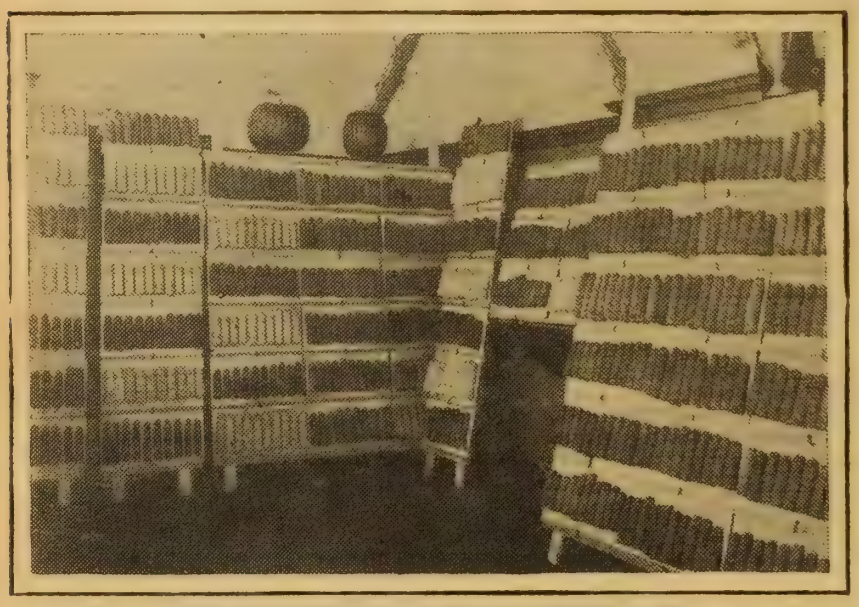
Wisconsin Cheesemakers' Association, at Fond du Lac, January 10th to 12th.

Farmers' Week (Swine Program), Madison, Wis. Beginning February 6, 1917.

A report on the cheese sales on call board at Spring Green, Wisconsin, dated December 18, 1916, is as follows: 556 boxes single daisy cheese 22 1-8; 100 boxes single daisy cheese 22 3-16; 59 boxes twin cheese 21½; 238 daisies withdrawn.

Chas. Hampke, secretary of the Manitowoc County Holstein-Friesian Breeders' Association, recently sold to Lewis Van Hulle. Oconto, Wisconsin, a bull sired by Recreation King Johanna Rue 105355; dam Dottie Squeezer Hambe 179424. This young bull captured first prize at the Oconto County Fair and those who are following his record are expecting to see some splendid results.

The annual winter convention and business meeting of the Wisconsin State Drainage Association will be held in Madison, February 13th. Mr. Warren Moore, of Ladysmith, will speak on drainage engineering problems in northern Wisconsin. Other addresses of interest are as follows: "What the drainage district has done for my farm," A. P. Nelson, Racine; "Raising onions on peat soil," E. A. Witte, Sprague; "Sugar beets in marsh soils," A. L. Dibble, Madison; "Tiling deep peat," O. R. Zeasman, Madison.



CORN DISPLAY IN JACKSON COUNTY, WIS.
Portion of corn exhibited in connection with contest put on by the Jackson County Bank, Black River Falls.

The southern Wisconsin corn and tobacco growers' meeting was held at Edgerton. There are a number of splendid exhibitions. The first prize winners were as follows: Golden Glow Corn—Tom Olson, Edgerton; Silver King Corn—Robert Rusch, Edgerton; any other variety of dent corn —W. E. Calladay, Lake Kengonsa; Single Ear Dent Corn—Harold Hall, Edgerton. Harold Hall also won first on tobacco and sweepstakes with 350 points.

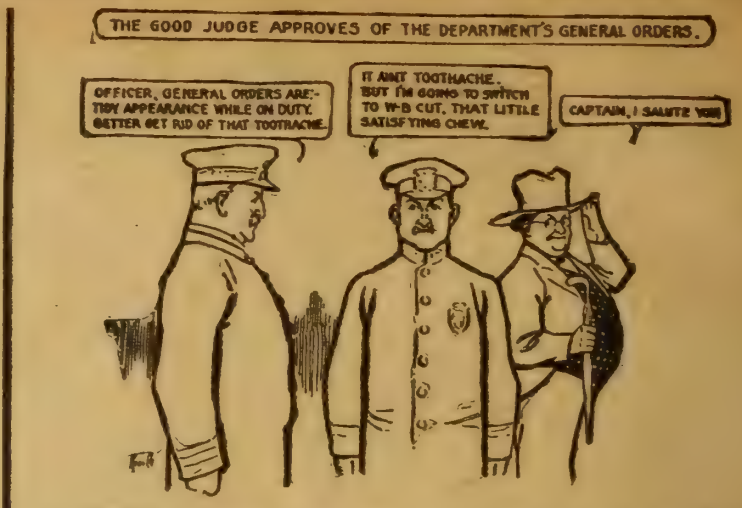
Growers of sugar beets will be interested in the announcement of the Rock County Sugar Company, which proposes a bonus on sugar beets provided the high prices of sugar keeps up. The contracts of this company call for $6 per ton for beets. The bonus provides for an additional dollar for every dollar in excess of $6 per 100 pounds that sugar commands at the time the beets are delivered. In other words, if sugar is $7 per hundred at the time the company will pay the $6 according to contract and an extra dollar on every ton of beets. The fractional increases in sugar quotations will bring corresponding increases to growers. The extra dividend will be paid on February 15, 1917. This chance of bonus is open to everybody.

According to Dr. A. S. Alexander, of the college of agriculture, the number of horses in Wisconsin in the last ten years has increased from 595,900 to 712,000. Ten years ago the average horse was worth $91 and today the average value is $124, indicating that Wisconsin is also furnishing some stock for other states. Dr. Alexander shows that in the past ten years Wisconsin has furnished 7,000 head of horses for North Dakota.

The question of a county agricultural representative is now being agitated in Door county. A number of cheese factories are being erected in this county and there is a good prospect for development of a dairy business. In these matters a county agent would help. There are also many facts concerning fruit growing and spraying wherein a live county agent could usually earn more than his salary by disseminating the proper information.

Mr. Philip Hoffman, of Dodge county, recently delivered two lots of pigs. The first lot weighed 1,900 pounds and consisted of nine spring pigs and the other lot, consisting of eight last fall pigs, weighed 2,060 pounds. The seventeen pigs weighed 3,960 pounds—almost two tons, averaging 232 pounds each, and Mr. Hoffman received a check of $360.37 at the rate of $9.10 per hundred. Mr. Hoffman has ten pigs left which are probably sold by this time and for which he expected to receive $215. This makes a total of $575.37 for twenty-seven pigs.

The annual seed show held at Princeton, Green Lake county, Wisconsin, Thursday, December 14th, was a grand success. This show was held under the auspices of the Princeton Commercial Club. The officers are: O. C. Olman, president; Dr. G. J. Recek, vice president; Geo. V. Kelly, secretary; H. J. Maxwell, treasurer. Prizes were won as follows: Clover—Ezra Westfield, first; Carl Ott, second; Wm. Prachel, third. Winter Wheat—John Koats, first; Z. W. Kohnke, second; A. G. Oelke, third. Rye—Lawrence Moshuda, first; Walter Bartol, second; Wm. Summerfeldt, third. Oats—Wm. Summerfeldt, first; Ridney Frost, second; Ed Golz, third. Beans—John J. Bartol, first; Wm. Saunke, second; Wm. Prachel, third. Flint Corn—Anton Naparallo, first; Otto Berger, second; J. W. Kohnke, third. Late Potatoes—Ezra Westfield, first; Wm. Prachel, second; Otto Suanke, third. White Dent Corn —Ezra Westfield, first; Wm. Page, second; Ed Bartol, third. Early Potatoes—John M. Codzoch, first; Ed Golz, second; Ezra Westfield, third. Yellow Dent Corn—Ed Golz, first; Wm. Golz, second; Henry Zuelolz, third. Addresses were delivered by Professor Lung and Professor James, of the Wisconsin College of Agriculture, Madison. Seeds and "Building Up a Dairy Herd" were the topics respectively.



GIVE a man a chance—whether he is on the force or a private citizen. It's the *satisfaction*, the *good tobacco taste* that wins him over to W-B CUT chewing. There are other things that help:—the gentlemanly appearance that the little chew permits; the easing up on so much grinding and spitting; last and not least, the economy—but it's the *tobacco satisfaction* that turns the trick every time.

Made by WEYMAN-BRUTON COMPANY, 50 Union Square, New York City

Entries have already closed for the Wisconsin Poultry Show to be held at Madison, January 1 to 5, 1917. One of the interesting features of this show will be an interstate competition between seven agricultural colleges, each of which will enter a display of market eggs. The poultry departments of the agricultural colleges of Indiana, Connecticut, Massachusetts, Michigan, Missouri, Kansas and California will compete. Officers of the state association are: M. C. Gerard, Stoughton, president; J. F. Love, Waukesha, treasurer; J. C. Halpin, Madison, secretary; directors, Wm. Bell, Arlington; Frank Cooper, Merrimack; Mrs. L. A. Ross, Belleville, and T. O. Evans, Dousman.

Although promised and provided with the hardest kind of competition the University of Wisconsin won forty-five premiums including fourteen firsts and six championships on its exhibit of sheep entered in the classes of the recent International Live Stock Exposition. The judge found in a class of thirty-one strong contenders a Wisconsin Southdown wether which was good enough to be made the reserve champion of the entire show. The Badger institution was also accorded a silver trophy valued at $50 for exhibiting the best lamb sired by a pure-bred ram from a western range ewe. Of the fifteen Internationals which have been held the Wisconsin station flock has won ten of the carcass championships. Frank Kleinheinz, known to flockmasters in all sections of the state, has fed each of these champions.

Mr. Ben L. Edgarton recently returned to Oshkosh from a visit in Madison county, New York. His reports on the apple crop in New York this year astonish our Wisconsin folks. Mr. Edgarton said that the best price being offered for apples was 30 cents per 100 pounds at the cider mills or about 15 cents a bushel. Apples arrived at the cider mill which he visited in such quantities that the price was lowered to 10 cents a bushel and Mr. Edgarton said he saw open fields lined with 8,000 or 10,000 bushels of apples in a pile. While these apples are not all of the finest grade, it is apparent that New York is much better supplied with such fruit this year than Wisconsin. The same gentleman also reports that there is also a good crop of potatoes this year in the section of New York which he visited and potatoes were selling at $1 per bushel.

Law Questions.

Compelling Road Work.

A Subscriber, Neillsville, Wis.—I bought a forty-acre farm six years ago, and the buildings on it stand near a laid out road about 200 yards from the main road. The laid out road has never been worked and is so rough, that in the spring it is impossible to drive a team over it. A neighbor and I use it and other farmers use it in the winter time to haul wood to the river. I have requested the town board to have the road worked, but they have not done so. How can I proceed to have said road fixed up?

Answer.—The town board of supervisors have the care and supervision of such roads as you mention and it is their duty to keep them in repair, but if they neglect to do so there is no adequate way to compel them. Under some circumstances a writ of mandamus might be obtained from the court requiring them to have the road repaired, but such a proceeding would be expensive and probably not successful in your case.

Rent of Estate—Aliens.

A Subscriber, Lena, Wis.—(1) My mother died in Wisconsin last fall and left a will of her property to us children. I worked her farm in the summer of 1916, and agreed with our family to pay $100 for the use of the farm. Some of the family want to handle that money and others ask me to hold it till the law calls for it. My mother's will was not probated at the time of said agreement. What should I do about the matter? (2) A foreign born man was living in this country in 1860 and became a naturalized citizen of the United States. Two years later he returned to his native country and there married a woman of that country. Later he returned with his sons to this country. Can his sons vote in this country without naturalization papers?

Answer.—You should hold the money till the executor of your mother's estate is appointed and then pay it to him. He is the proper person to receive it and give you a receipt for the same. (2) The sons being foreign born are aliens and in order to have a right to vote in Wisconsin must get their first papers by declaring their intention to become citizens of the United States.

Horse Deal—Blindness—Settlement.

A Subscriber, Athens, Wis.—A year ago I bought a horse for $235 on trial for sixty days and paid $35 cash and gave my note for the balance payable in six months with 7 per cent interest. The horse was guaranteed by the dealer to be perfect and sound. When the horse was delivered to me its left eye was sore, but the dealer said it was only a cold, and that the eye would be all right in a few days, and I accepted the horse. Several weeks afterwards the eye became worse, and I took the horse back to the dealer—but he gave me some salves and medicine and told me to keep the horse a while longer and use the medicine and the eye would be cured. When the note became due, the horse was blind in the left eye and the other eye was affected. Then a settlement was made between me and the dealer and he allowed me $50, and I then paid him $80 on the note, leaving a balance of $70. The horse is now totally blind in both eyes and I refuse to keep it. Can I compel the dealer to take back the horse and refund my money?

Answer.—You cannot compel the dealer to take back the horse and refund your money. The settlement made between you and the dealer when the note was due and he allowed you $50 and you paid $80 on the note, settled the matter of the blindness of the horse, and you are liable to him for the $70 and interest thereon.

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

Did Best in Box Stall.

To the Editor:—My baby beef entered in the Wisconsin State Contest was born January 3, 1916. On the 15th day of August he weighed 620 pounds. On October 28th he weighed 860 pounds. I kept my calf in the barn all the time. I kept him tied up part of the time. I found that he was not eating enough, so I gave him a

GEO. E. DAY, IOWA COUNTY, WIS BABY BEEF RAISER.

box stall where he could get more exercise and noticed that he did much better. He has been sucking all the time. I have been feeding him grain ever since he was six weeks old. He did not eat feed very well until he was five months old. George E. Day.
Iowa Co., Wisconsin.

Noon Lunches at School.

To the Editor:—Am glad to inform the readers of The Wisconsin Farmer on the subject of noon lunches in our school.

Being obliged to stay at home this winter, I was employed as teacher in the district school here.

With a school of forty-five pupils, ranging from the first through the eighth grades, didn't give me very much chance to introduce my special work.

Realizing, however, how necessary it is to have something hot with the usual cold midday lunch, I brought the subject before the parents of the district.

Its installment has proven a greater success than I anticipated.

The equipment costs between $5 and $10. It consists of a two-wick kerosene stove, a granite pail which we are using for a kettle until we receive an extra large double boiler that has been ordered; a small milk can with a fitted cover, dish pans, stirring spoons, measuring cup, ladle and a large dry goods box with an oilcloth on the top which serves for the kitchen table. The lower part has curtains in front of it and holds the cooking utensils. Each pupil provides himself with a cup and spoon and for current expenses for provisions brings 5 cents a week. Our dishes are simple, but nourishing. Milk is the main ingredient.

So far we have made creamed soups, like potato, pea, bean, rice and bread soups.

Besides these we have had creamed potatoes and cocoa.

Sometimes we are planning to have stock soups with vegetables, and when apples do not appear so much in their lunch baskets we will have some freshly made apple sauce.

The potatoes are cooked at home, but creamed or made into soup at school.

The program in the state manual allows one period a week for domestic science work. We do some cooking each day, but use very little school time for the same.

Two girls, different each day in the week, begin the cooking at the morning intermission. After the bell rings one or the other occasionally tends to it. At twelve o'clock each pupil takes his lunch to his desk and is served with the hot additional food.

An effort is made to have each pupil take more time for the noon lunch and be orderly and neat in eating.

Thirty-five out of forty stay for lunch and no one has missed bringing money to defray expenses for provisions. Last Friday we had a box social and an illustrated lecture. The proceeds will be used to defray the cost of the cooking equipment and other needed articles in the school.

Sophie M. Schaefer.
Brown Co., Wisconsin.

Early Reminiscences.

To the Editor:—I think the country in which we live is the best in the world. It has been my home most of the time since September, 1844, when my father and family came from Stuben county, New York, and located on Rolling Prairie four and one-half miles northeast of where Beaver Dam now stands. This name was given to the city because a colony of wild beavers had built a dam across the river at that place and still occupied it. Father located on the old Blackhawk Indian Trail where they passed across father's land as they went from their camp on the Mississippi river to Milwaukee with their furs, or whatever they had to trade for what they needed, but they always had whisky on the bill of fare and they always made my folks a call and begged provisions. We had to give them what they wanted or there would be war in the camp. Their trail lay across father's land and when he fenced it so they had to make a crook in their trail they did not like it. It made them a little cross and almost ready for war when they had a good supply of firewater, as they called it. As soon as they were a little drunk it would not do to cross them.

The next fall after father went there, which was about a year, my brother and I were digging potatoes. Brother dug and I picked up. Father had gone to Beaver Dam. The Indians came along and wanted some potatoes. My brother being older than myself told them he could not give them any as they belonged to the smoky man, as that was what the Indians called the white people, but they insisted on having some potatoes and one old Indian held up both hands and said he wanted as many as he had fingers on both hands. Brother told him to take so many and the Indian gave a whoop and all the Indians came and took off their large blankets and picked up all we had dug—as much as ten or twelve bushels—and packed them on their ponies and went on their way laughing and hooting. You bet that surprised us boys. When father came home he wanted to know how many potatoes we had for him to haul to the house. We did not have any, as all we dug were on the way to the Mississippi.

At night the prairie wolves made the nights hideous with their howling. There were twenty or more in one drove. When father got a crop of winter wheat in and it looked fine the wild deer would come into it, from ten to twenty in one drove, and we boys had to take the dog early in the morning and drive them out. Sometimes a big buck deer would stand his ground and drive us out. That was a great country and now the land is selling for $150 per acre, but Beaver Dam is not a progressive city—nothing like Antigo. In 1883 there were no sidewalks here and what is main street now was all filled with stumps. Now we have one of the most wide-awake cities to be found—all the latest improvements—and it has made steady growth all of the time, but this past season it has taken a new pace and there is more building done and being done this past summer than in several years. The city is building an up-to-date high school building with all of the latest improvements. It is second to none in the state. A large mill company has also located here. Their mill and whole plant is one of the best, if not the best, to be found anywhere. The whole plant covers forty acres. Another mill has just located here called the Fish Lumber Company and the man at the head of it is one of the most progressive men to be found. The city is pushing north. They have platted some farm land at the north and have built several dwellings. They have a store in the north end of the city and it is doing a great business. There has been many dwellings built and a number more started. If you want to live in a large city come to Antigo. It has the farm and dairy business to back it up. Langlade county is bound to be the banner dairy county in the state. H. F. Marsh.
Langlade Co., Wisconsin.

Save 10% to 50%
in clearing for the plow

WE mean just that. Pulling the stumps is not enough. They must be cleared away. The Kirstin Method not only pulls stumps, but gets rid of them after they're pulled and saves you 10% to 50% of the usual cost of turning barren stump land into harvest fields. We guarantee that.

15 Year Guarantee Flaw or no Flaw

Kirstin Stump Puller
One Man — Horse Power

Guaranteed Saving of 10% to 50%

The horse power machine has proved itself on big jobs on over 35,000 farms. Because of its triple power, it pulls anything it tackles, without strain to man, horse or machine It will clear more than two acres from a single setting. Has started many a farmer on the road to fortune.

The One Man Puller gets the biggest stumps too. Double leverage gives you a giant's power, a push on the handle means a pull of tons on the stump. Clears an acre from one anchor. One Man Pullers come in two types, clutch and drum.

Every Kirstin is guaranteed for 15 years, flaw or no flaw, and you get your money back if the Kirstin bond does not live up to its promise.

Send for Free Book, "The Gold in Your Stump Land"

It gives valuable information on all kinds of land clearing. It tells all about the Kirstin line of pullers—the most complete in the world—and explains Kirstin Service, forever free to all owners of Kirstin Machines. It has many photographs of stumps that the Kirstin has pulled, and letters from the men who pulled them Don't buy a puller until you read this book

Big Money to those who Order Early To early buyers in each locality we offer a special opportunity to join in our profit sharing plan. No canvassing, just a willingness to show your Kirstin to your neighbors. *Don't wait—send the coupon today.*

Measuring a Circular Hay Stack.

By Use of a Simple Rule an Accurate Computation May Be Made on a Tonnage Basis.

AN ARTICLE appeared in a recent issue of this paper describing a method commonly used for measuring hay in the ordinary long haystack or rick. Some farmers, however, have circular haystacks and may desire to estimate the tonnage in stacks of this shape. For this purpose, therefore, a different rule must be applied.

First, measure the circumference and height of the stack. The circumference is easily measured with a tape-line thrown around the stack near the bottom, as indicated by the dotted line in Figure 1. To determine the height accurately is more difficult, but for practical purposes a reliable estimate can be made in this manner: Secure two light poles, one of which is nearly as tall as the stack that is to be measured; the other may be considerably

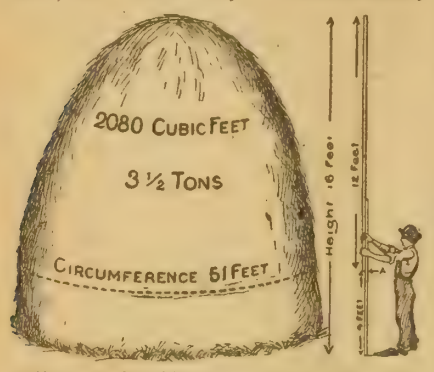

Figure 1.—Circular haystack with sloping sides. Measurements for determining weight of stack are indicated. Letter A shows mark on short pole opposite lower end of long pole.

shorter. Let one man hold these poles one against the other and near the stack, as shown in Figure 1, so that the longer pole may be moved up or down while the shorter pole remains on the ground. Let another man stand about thirty feet away and indicate when the end of the long, movable pole is just even with the top of the haystack. When this adjustment has been made a mark is made on the shorter, stationary pole, opposite the lower end of the movable pole. Letter A in Figure 1 shows this point. Then the distance from this point to the ground is measured on the short pole and to this measurement is added the length of the long pole. The result is the height of the haystack.

After the measurements of the circumference and the height have been obtained the next step is to calculate the number of cubic feet in the stack. To do this, multiply the height by the circumference, then multiply by the circumference again and divide by twenty. For example, the haystack shown in Figure 1 has a height of sixteen feet and a circumference of fifty-one feet. Applying the foregoing rule,

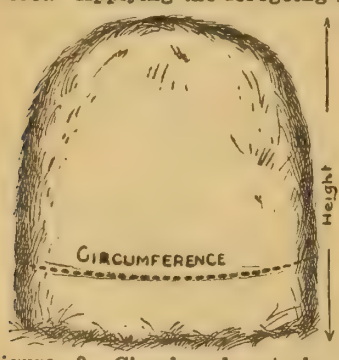

Figure 2.—Circular haystack with rather flat top and steep, straight sides. Necessary measurements for determining weight of stack are indicated.

we have sixteen multiplied by fifty-one, which equals 816; multiplying by the circumference again we get 41,616; and dividing this figure by twenty we get a result of 2,080 cubic feet.

This rule holds good for determining the number of cubic feet in circular haystacks having a shape similar to that in Figure 1. A slight change is necessary if the stack has a rather flat top and steep sides like the one shown in Figure 2; in this case the number used to divide by in the last step is fifteen instead of twenty. Otherwise the procedure is the same as that given above.

We are now ready to calculate the tonnage. This is done by dividing the number of cubic feet found in the haystack by the number of cubic feet in one ton of hay. The latter figure varies according to the kind of hay and the length of time it has been standing in the stack, but for timothy or mixed clover and timothy hay the figures in the following estimates may be used. Hay that has been standing in the stack less than thirty days averages 590 cubic feet per ton; from thirty to sixty days, 580 cubic feet per ton; and from sixty to 155 days, 515 cubic feet per ton.

If we assume that the stack in the example given above has been standing for fifty days, then the tons of hay it contains may be found by dividing 2,080, the number of cubic feet in the stack, by 580. The result is three and one-half tons. On the other hand, if we had assumed that the stack was less than thirty days old we would have divided by 590 instead of 580.

Badger Farmers Had Good Year.

(Continued from page 1.)

Raymond Baker, assistant secretary of the Wisconsin Live Stock Breeders' Association, assured the writer that 1916 has been satisfactory in every way to the live stock interest with much encouragement for 1917.

The government report shows 1,680,000 milk cows in Wisconsin for the year, putting Wisconsin at the lead; 1,310,000 cows other than milk; 2,140,000 hogs; 712,000 horses and 664,000 sheep. The forthcoming final report is expected to show an increase in all, while the December report shows the values of farm animals to have increased materially during the year. Hogs are worth $8.80 against $7.30 a year ago; beef animals at $5.90 against $5.70 a year ago; sheep at $5.70 per head against $5.10 in 1915, and milk cows worth an average of $66.70 against $62.70 in 1915.

The interest in both beef and sheep has been specially strong in all sections. For years the number of sheep in Wisconsin has fallen off as much as 100,000 yearly; this year it is thought they held their own, and in 1917 an increase should be registered. Wool is bringing unusual prices. With the settling of new lands in the northern part of the state, there is greater demand for sheep for brushing down, and mutton is also profitable. The baby-beef show, held in conjunction with several county fairs and at Madison in November, focused attention on the beef industry with the result that many pure-bred sires of the beef types have been imported into the state this year. Wisconsin swine sales have established new price records, which speaks well for the pure-bred herds already established. Many of the boars bought at these sales are staying in Wisconsin, and this means a better swine industry. In the dairy cattle line there has been a steady demand for good stuff; more cattle are probably being bought privately than ever before, and the 1916 figures should show a substantial increase in numbers.

The close of 1916 finds the dairy products industry in its most profitable condition. "The state has never seen such prosperity in this line as now," remarked Mr. George Wiegle, dairy and food commissioner. Cheese prices are at new high levels and promise to go higher, and the butter market is strong. Cheese, now quoted on the boards at 26 cents a year ago was as low as 15 and 14 cents. The government's figures show the farm value of butter now at 35 cents against 28 cents a year ago. The Elgin quotations have been up to 42 cents.

The outstanding feature of the year in dairy products development has been the putting into force of the new law licensing buttermakers and cheesemakers and setting certain standards of cleanliness before such factories could secure licenses. As a result the dairy and food commission has been able to put the dairy products business on a higher plane and is now preparing statistics which will give an accurate idea of the cheese and butter production of Wisconsin. Cheese production in 1916 is estimated to have exceeded 250,000,000 pounds. Butter production 150,000,000 pounds. Mr. Wiegle makes these rough estimates from figures furnished the commission by factories. This means an increase of 60,000,000 pounds of cheese in two years, an increase of 20,000,000 pounds of butter in the same period. In 1910 Wisconsin produced more than half the nation's cheese and a sixth of the butter—the ratio is now even greater. With the prevailing high prices the importance of this industry to Wisconsin is readily apparent. An increase of 12 to 14 cents a pound on 250,000,000 pounds of cheese is $30,000,000 to $35,000,000. That is the extra price that went into the pockets of Wisconsin cheese factory patrons in 1916 as compared with 1915. The same held true with the creameries.

The dairy and commission figures will also show an increase of 400 cheese factories since 1910 and a decrease of ninety creameries. This gives Wisconsin in round figures 2,400 cheese factories and during the past year many creameries have turned to making cheese to take advantage of the high prices. On present market value this cheese and butter business at the close of 1916 on these estimates is an item of $175,000,000.

Milk prices are also higher in all sections. The condensing plants are paying better prices; in Milwaukee and other city-producing territories prices have risen in keeping with the prices set by the cheese market.

Then there is the poultry industry—small, but very important with the farm value of eggs, by government report, at 31 cents a month ago. For fresh eggs many farmers are getting as high as 48 cents, according to J. G. Halpin, secretary of the state association. There are 9,000,000 hens in Wisconsin, laying a total of 900,000,000 eggs yearly, and Mr. Halpin, at present prices, estimates the farm value of a hen at 75 cents.

These lines of farming, as mentioned, embrace the principal activities of Wisconsin farmers. As prices on all products are higher, the Wisconsin farmer is, therefore, more able than ever to meet rising costs in the things he must buy. In other words, he has the buying power and this is not better shown than by the enormous increase in the purchase of automobiles in this state during 1916 by farmers.

Official figures in the secretary of state's office show that when the last 1916 license was issued a week ago there were 115,645 automobiles registered in Wisconsin in 1916 as compared with 79,790 in 1915. This is an increase of 35,000 over last year. Of the 115,645 it is estimated 40,000 are new cars—bought during the year and the average value is estimated at $800. This means that Wisconsin has about $90,000,000 in automobiles and it has been figured 40 per cent are owned on rural routes, excluding the small cities.

The closing year was also a good one for the state fair. Secretary Remey has even better plans for 1917 which will see the erection of a new poultry building costing $25,000 and a complete water and sewage system on the fair grounds. There will be many improvements in premium classifications, etc., with the hope of making the 1917 fair the greatest in Wisconsin's history.

No recital of the year's activities would be complete without mention of the campaign for better roads. During the year the state, towns, cities and villages built 1,227 miles of improved road under the direction of the state highway commission at a total cost of $4,171,096. Most of this was borne by the towns and villages as the state aid fund for both 1916 and 1917 only totals $921,700, and it is apportioned to the counties and towns as they improve the roads. For 1917 a comprehensive plan has been laid out and about $4,600,000 will be spent for better roads as already voted by the towns and other units of government.

The 1916 road improvement was divided as follows:

Graded but not surfaced	486 miles
Concrete	59 "
Stone macadam	215 "
Gravel macadam	302 "
Other permanent surfaces	63 "
Non-permanent surfaces	100 "
Total	1,227 miles

The influence the agricultural college, the farmers' institutes, the experiment association and other bodies are playing in Wisconsin agriculture is also of great importance in a review of the year. Interest is now keener in boys' and girls' club work and community endeavor than ever before and great strides have been made during the year along these lines. Farmers' institutes went off very successfully and Superintendent Luther has a splendid set of them outlined for 1917. The farmers' course at Madison the first week in February will be featured this year as "Swine Week" by the college of agriculture, and this promises to be of as great importance as the 1916 farmers' week.

All in all, 1916 has been a splendid year for Wisconsin farmers. They have every reason to look towards 1917 with encouragement and optimism.

DAIRY

Unique Plan to Increase Dairy Herds.

Within five years, between 1910 and 1915, there was a decrease of dairy cows in the state of Illinois to the amount of nearly 44,000. To keep pace with the growing population it would be necessary to increase the dairy herds by 300,000 head. This deficiency, growing as we might say at both ends, is startling, and, viewed from a cold business proposition, explains to a great extent why dairy products are so high.

A plan that was started a few years ago that did not meet with much favor was to agitate legislation against butchering heifer calves. What seems a far better plan which is being worked out by the dairy extension movement is to send experts out into the country to buy calves that farmers do not care to raise. The calves would be taken to a farm prepared to care for them, where they would be kept until old enough to eat dry feed, when they would be turned over to the calf clubs of the state. The calves could be purchased cheaper than the older ones, and, in the meantime, the children of the calf clubs would profit by the experience of caring for the youngsters at an earlier age and longer time.

It is planned to raise 500 calves a year and $20,000 would be required; $12,000 is already pledged. The calves would be sold through the bankers to the calf clubs at cost, the idea being to build up the dairy industry of the state.

In the past year eight clubs have been formed and 120 carloads of high-grade dairy cows have been placed in the state by the extension movement.

The Care of the Cream.

The quality of creamery butter depends on the cleanliness and care given to the cream by the community where the cream is gathered, after all. A man who would not touch butter from the store, no matter how seemingly it was all right, would eagerly buy creamery butter at 10 cents more on the pound that had been made from the cream in the selfsame community, with the comfortable assurance that "Creamery butter is always right!"

As a matter of fact, it is not always all right, as many of us who at times must buy butter can testify. It is sometimes strong, just as country butter is not quite as sweet as it should be. Indeed, many times a woman will let the cream that is intended for the cream man set carelessly around, when if it were for her own churn there would be a different story.

A couple of farmers' wives were comparing notes about their work. They had done this, and they had done that, that busy morning. Among other things, one of them, who is counted as a No. 1 housekeeper, told of "emptying the cream." "Everything about the cupboards were full," she explained, "and it does take such a long time to get it all into the can and the things washed up!"

Well, the only saving feature about it is that the cream was not poured into the can while warm. But to let some half dozen or more dishes of cream set in the cupboard that hot weather instead of placing in the can as soon as cool and keeping at somewhere near the required temperature for anything like good results! It is downright carelessness, and then when the cream fails to test as it should someone else is blamed.

Carelessness and all attending evils pay us back in our own coin. It is not until the average person finds that it is hitting his pocketbook that he particularly cares, and the sooner it is fully understood that in most cases it is not the fault of the cow, neither that of the creamery that the check is not what it should be, the sooner will the trouble be remedied.

Pride in the Dairy.

No man has a better right to feel a pride in his work than the man who does well any work connected with the business of dairying. No matter whether it be the proprietor, the manager, the most humble helper, the farm boy, the woman, pride is justifiable and public esteem is deserved. One dairyman who has forced his way from a very humble beginning has expressed himself as preferring a thousand times his business of producing clean milk from healthy cows and having only a few whitewashed shacks for buildings to that of the brewer who employs hundreds of men and who has a fine home on the hill and an auto for almost every hour of the day. This dairyman was producing special milk for babies and gloried in the high class of the product with which he supplied his patrons at all times. His patrons, too, were pleased and pointed with satisfaction and pride to the fact that they purchased milk from that particular dairy for their youngsters.

A good barn that is sanitary and well lighted, a herd of high-yielding cows, a silo filled with first-class silage, a bull from famous or high-producing families are all objects worthy of any man's pride. The one who takes pride in his dairy and in his work connected therewith is the one who will be happy and who will progress. The city milkman who has his place always open to inspection and who has a standing invitation to the public to visit his place at any and all times will find it to have a helpful effect upon his patronage and that his business will grow.

The pride of a dairyman is always the pride a man feels when he has performed in a creditable manner some difficult task. It is never the false pride that prevents a man from doing hard work. It is the pride that spurs him on to a greater effort and greater achievement.

Delivering Milk in Bottles.

To the Editor:—The plan of delivering milk in bottles is by far a more cleanly and sanitary method of getting the milk into the hands of consumers than dipping it from a can and it is a system of retailing that must come into use by all dealers sooner or later. There are, however, some milk sellers who are going to keep on with the old way of dipping the milk from the can as long as possible.

In dipping milk from a delivery can there is a loss of from one to three quarts in forty. Some claim that they can fill forty quart bottles from a can which holds forty quarts, but I have found, after several trials, using a one-gallon hand filler with care, that a can holding forty quarts of milk is cleaned out thoroughly in filling thirty-nine quart bottles and that a can holding twenty quarts would fill only nineteen and one-half quart bottles and by careful hand filling practically no milk was wasted.

I know there is some extra expense about delivering milk in bottles, but modern trade conditions are calling more and more for their use. From the loss of bottles I estimate like this: For every bottle delivered daily it will be necessary to buy two new bottles annually and perhaps more, that is, if one delivers 150 quarts a day in bottles he will need to buy 300 new bottles per year.

In one way there is a good deal of extra work attached to handling milk in bottles in the way of filling, washing bottles, etc. On the other hand, it saves work, for when the milk is bottled and the bottles placed in cases it can be delivered and handed out to customers much easier and quicker than when dipped from a can. A dozen bottles, including the case, weighs about thirty-one pounds. Of course, a good motor-driven vehicle or a heavy wagon and strong horses are required to handle a bottle delivery route successfully. Subscriber.

Bad-Tempered and Why?

Cows are sensitive animals and form habits easily. Many a good cow has become "mean", through some irritating udder sore left to heal itself. Save the cows' disposition and serious danger by using Bag Balm, the great healing ointment, at the first sign of caked bag, inflammation, chafing, sore, chapped or injured teats. A great antiseptic healer for any scratch, bruise or cut.

Sold in generous 50c packages by feed dealers and druggists. Write for useful free booklet, "DAIRY WRINKLES."

BAG BALM

MADE BY THE KOW-KURE PEOPLE

INDISPUTABLE PROOF OF

DE LAVAL

CREAM SEPARATOR

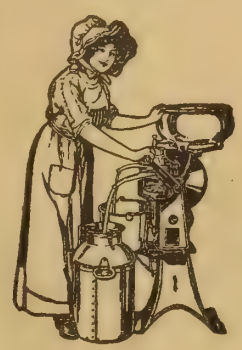
SUPERIORITY

SINCE 1892 the National Buttermakers' Association has held butter-scoring contests each year in connection with its Annual Convention; and at every such Convention, butter made from cream separated by a De Laval Separator has scored highest. This is a 100 per cent record for the De Laval. Twenty-three wins out of twenty-three contests. No room for chance there. Only unusual merit made such a record possible.

But that is not an unusual record for the De Laval. At the great National Dairy Show at Springfield, Mass., in October, 1916, butter made from De Laval-produced cream scored highest in both the creamery and dairy classes, while De Laval cream scored highest in the cream classes.

The juries at the great national and international expositions have invariably acknowledged the superiority of the De Laval. They awarded the Grand Prize to the De Laval at the Panama-Pacific Exposition, as also at Buffalo, Chicago, St. Louis, Paris, Brussels, and all the great world expositions for 25 years.

As a matter of fact, it is very easy to prove De Laval superiority. All that is needed is a careful comparison with any other machine, either as to design and construction, or, more important still, as to performance. But such proof is no longer necessary to a well-informed dairyman or farmer. He has seen proof of De Laval superiority piled up and multiplied so many times that it is no longer open to question by anyone. It is an accepted fact.



If you are without a cream separator or need a new one, the only question you need to ask is, "Which is the proper size De Laval for me to buy?"

See your De Laval agent immediately or, if you don't know him, address the nearest De Laval main office as below for any desired particulars.

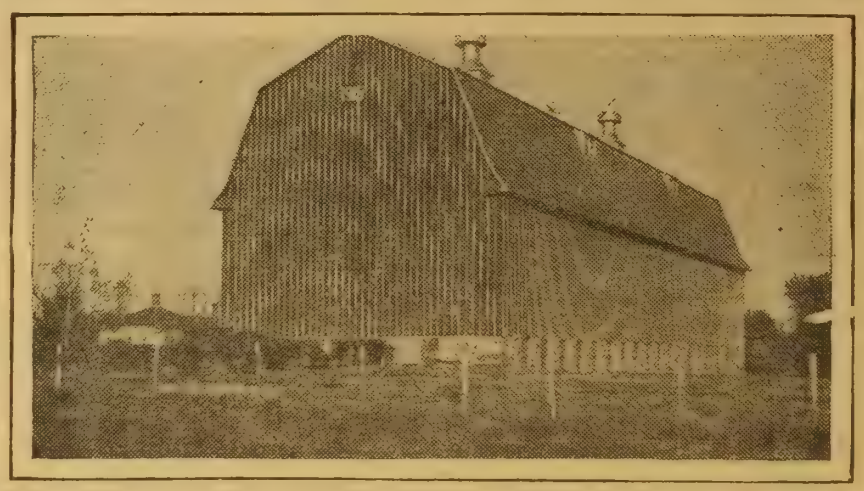
UPPER WISCONSIN

Fine Home For Good Dairy Cows

Forty Years Ago John Cater Settled in Wisconsin Wilderness—His Son Has Recently Erected a Fine Barn on the Old Farm.

THE illustrations shown herewith were taken for The Wisconsin Farmer on the E. S. Cater farm, near the village of Knowlton, Marathon county, Wisconsin. Mr. Cater's father, John Cater, settled in the wilderness in this section forty years ago. This barn is full length of the pen, is a chicken coop with a number of large windows facing the south. Mr. Cater has a little herd of Holstein cattle, in which he takes great pride, and with which he is very successful. He believes that the cow that is comfortable is most likely to give a profitable flow



END VIEW OF A WELL-PROPORTIONED, ROOMY BARN—ON THE E. S. CATER FARM, MARATHON COUNTY, WISCONSIN.

36x120 feet, has sixteen-foot posts. The roof is fourteen feet with fifteen feet hips. The barn is modern, though, having cement floors, steel stanchions, individual adjustable mangers, calf, bull and maternity pens. This barn will comfortably house sixty head of stock. Our Wisconsin readers will wonder at once where Mr Cater has his silo, as a dairy farm which could afford such a splendid barn as this would certainly not forget the silo. There is a large round silo, 16x30 feet, built of stone, on the side of the barn not seen in either of these pictures. Conveniently located near by is a big stone pig pen, 20x80 feet, with cement floor, feeding troughs and partitions. Above, and the

of milk providing, of course, due attention is paid first to her breeding and later to her feeding. Mr. Cater has not neglected the matter of ventilation which he regards as important to the life and health of the cow, especially since a cow takes into her system several times as much air each day as food. With good equipment like these described, and with attention to the cows and their wants, any Wisconsin farmer can make good profit with good dairy cows. Added to the profits which accrue with the use of better equipment is the pleasure one gets out of his work. The owner, his boys and the hired man are just as interested in better equipment as are the cows.

IT HAS BEEN DEMONSTRATED THAT COMFORT FOR THE COWS AND CLEANLINESS ADD TO DAIRY PROFITS.

THE VENTILATION OF THIS BARN HAS FORTUNATELY NOT BEEN NEGLECTED.

Cow-Testing Reports.

Rations Which Increase Profits.

To the Editor:—The A. F. Barstow herd made the best record this month with an average of 1,043 pounds of milk and 34.5 pounds of fat. Within the month another car of feed was purchased, and nine inferior cows were sold out of our herds. One member increased his profit $15.05 through increased production by the use of a ration of corn, oats, bran and oil meal, in preference to ground oats alone, which he fed last month. Another member fed bran, barley, brewers' grains and oil meal, this month, instead of just bran and barley, which was fed last month. His feed cost decreased $9.21 and the total milk production increased 1,204 pounds, making a net increase in profits of $19.01.

The following table gives the names and records of cows in the Columbus, Wis., Association, which produced forty-five pounds of butter fat or over, for the thirty-day period ending December 12, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

Grade Guernsey Wins Honors.

To the Editor:—With my forty-five-pound list I am sending a picture of our champion cow, in this association, for the past year. She was dry when the picture was taken. She won first prize at the Winnebago County Fair, as a dairy cow, also a $15 prize for being exhibited with the highest butter fat record for the first nine months' work in the cow-testing association. She is a grade Guernsey. Her record for the year is 9,575 pounds of milk, testing 5.02 making a total of 481.4 pounds of fat. She also produced a nice heifer calf October 31, 1916. She is owned by H. B. Mosley, of Omro, Wis. The following is the first monthly report of the Winnebago Cow-Testing Association, which started its record year of work November 1, 1916. Mr. J. W. Thall, of Pickett, Wis., had the largest number of cows producing forty pounds of fat or over, the total number being nine. H. E. Washburn, was second in this list with eight cows. The following are the cows in the association which produced forty-five pounds of fat, or over, for the thirty-day period ending November 30, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
J. W. Thrall					
Myrtle of Appleton, G. G...	7	9-29-16	978	4.7	46.0
Newel's Beauty, G. J.	10	10-12-16	1062	4.6	48.9
Frank Brooks					
No. 12, G. D...			1098	4.4	48.3
H. R. Mosely					
Daisy, G. G...	9	10-31-16	990	4.7	46.5
Mabel, G. G...	3	10-31-16	840	5.7	47.9
G. E. Washburn					
Bessie, G. J...	6	10-9-16	771	5.9	45.5
Black Wallie, G. J.	7	10-2-16	750	6.0	45.0
Spots, G. J....	7	10-12-16	999	5.7	56.9
Nubbs, G. J...	7	10-16-16	681	6.1	47.7
Lynda, P. B. J.	5	10-11-16	1027	5.9	60.7

Archibald R. House, Official Tester.
Levi Brunson, Secretary.

Baraboo Association.

To the Editor:—There are at this time thirty-one herds in this association. Eight of them ar small and have gone together making four herds and permitting me to test two in one day. This makes it a twenty-seven-day job of testing each month. The Holsteins are at the head of the list with twelve herds. The Guernseys second with ten; Jerseys eight and in addition we have one pure-bred milking Short-horn herd owned by Albert Templin. For the past month the Guernseys made the best record. Martiny & Son head the list with the best cow which made 65.2 pounds of butter fat in thirty days.

The following is a list of cows which gave forty-five pounds of butter fat or over in the thirty-day period ending November 23d:

Owner and breed	Lbs. milk	Per cent fat	Lbs. B. fat
Martiny & Son, R. G.....1252		5.2	65.2
Martiny & Son, R. G.....1155		5.0	57.8
Martiny & Son, R. G.....1248		4.2	52.4
L. M. Wichern, G. G.....1240		4.2	52.1
L. R. Siebecker, G. H....1330		3.9	51.9
Glenn Johnson, G. G.....1163		4.4	51.2
Ed Egerer, G. G.....1015		5.0	50.8
L. M. Wichern, G. G.....1434		3.5	50.2
Martiny & Son, R. G.....1080		4.6	49.7
Glenn Johnson, G. G..... 890		5.5	49.0
L. R. Siebecker, G. H....1042		4.6	47.9
Rollo Webster, G. H..... 795		5.9	46.9
L. W. Wichern, G. G..... 954		4.8	45.8
L. M. Wichern, G. G..... 772		5.7	45.0

W. E. Johnson, Official tester, Baraboo Association.

Reedsburg Association.

To the Editor:—During November twenty cows produced forty pounds of butter fat or over. Several of our farmers seem inclined to skimp a little on feeding, and this has cut down the size of our list. The following table shows the cows in our association which produced forty-five pounds of butter fat or over for the thirty-day period, ending December 6, 1916:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Wm. Van der Ohe					
No. 10, G. H.....	4	Nov.	1530	3.8	58.1
No. 5, G. H.....	6	Oct.	1260	4.2	52.9
Frank Groat					
Pepper, G. G.....	6	Oct.	1140	4.5	51.3
Wm. Hahn					
Molly, G. H.....	5	Oct	1020	4.8	49.0
Sorge Seamans					
Big Black, G. H..		Nov.	1110	4.3	47.7
J. J. Marshall					
E. Ellenson					
Gr. Jersey	8	11-5	831	5.6	46.5
H. V. Bartlett					
Gr. Jersey	6	10-31	948	5.9	55.9
Gr. Jersey	4	11-21	1032	5.6	57.8
J. H. Kelly					
Gr. Hol.	4	10-9	1413	4.2	59.3
Gr. Hol.	2	10-26	1152	4.0	46.1
Gr. Hol.	2	11-10	1158	3.9	45.2

During November twenty-one cows made forty pounds or more of butter fat. These cows are getting the following feeds, silage, hay, dried brewers' grains, bran, ground oats and barley.

R. A. Boyd, Official Tester.
H. V. Bartlett, Secretary.

Barron-Dallas Association.

To the Editor:—A grade Holstein holds the record according to the last monthly report of the Barron-Dallas Cow-Testing Association. The following table gives a list of cows which produced forty-five pounds of butter fat or over for the thirty-day period, ending December 15, 1916:

Owner, name and breed	When fresh	Lbs. milk	Per cent fat	Lbs. B. fat
A. Borgen				
No. 2, G. H...	11-16-16	1164	4.6	53.5

S. McBrayer, Official Tester.
W. M. Black, Secretary.

The False Blossom Disease of Cranberries.

The "false blossom" disease of cranberries, which has been an important factor in reducing the cranberry crop in Wisconsin, is discussed and suggestions for methods of culture which may prove beneficial in combating the disease are made in a professional paper, Bulletin No. 444, recently issued by the United States Department of Agriculture. While the disease has had its principal development in Wisconsin, it has also appeared in Massachusetts, New Jersey, Oregon and Washington. Most of the cases in the latter states can be traced to Wisconsin vines used for planting.

The disease appears to bring about a retrogression of the floral parts of many of the blossoms of the affected plants to foliage leaves, the resulting "false blossoms" failing to produce fruit. The affected plants have a tendency to develop lateral branches from the usually latent buds below the fruit buds. These lateral branches are slender and weak and fail to produce normal flowers or fruit. In other instances the end of the flowering shoot, instead of forming a fruit bud for the next season as under normal conditions, continue to grow and produces a long, slender runner. The result of these abnormal developments is that cranberry plants in bogs where this malformation occurs generally show an excessive growth, usually forming a deep, dense mass of vines.

The cause of the false blossom disease is not certain, but specialists of the department who have made studies of the abnormal condition believe it to be due to a disturbance of the nutrition of the plants. No evidence has been found that insects or fungi cause the trouble. Malformed plants, when transplanted and kept under more favorable conditions, tend to return to the normal form. It is, therefore, suggested that owners of bogs in which the plants are affected by the disease take steps to make the soil and nutritive conditions for the plants as favorable as possible. This involves sanitary measures such as clean cultivation, thorough drainage, pruning and fertilization where needed. In cases where half or more of the plants in an area are affected it is best to mow off the vines, properly drain the bog and apply ground rock phosphate, which, it is believed, is beneficial. In cases where the disease has a considerable development it will probably be best to scalp the bog and replant with healthy vines. It is not known whether diseased vines may transmit the abnormality to normal plants, but, at all events, diseased plants should be carefully avoided in making new plantings.

PART IV.---One Squaw Man.

CHAPTER I—Lamonti.

THE next morning awoke with the balmy air of spring following the sunrise over the snow—a fair, soft day, with treachery back of its smiles; for along in the afternoon the sky gathered in gray drifts, and the weather wise prophesied a big snowfall.

All the morning Genesee wrote. One page after another was torn up, and it was the middle of the afternoon before he finally finished the work to his satisfaction, did it up in a flat, square package, and having sealed it securely, called Kalitan.

"You take this to the express office at the station," he said; "get a paper for it—receipt; then go to Holland's—to the bank store; give them this," and he handed a slip of written paper. "If they give you letter, keep it carefully—so," and he took from his shirt pocket a rubber case the size of an ordinary envelope. Evidently Kalitan had carried it before, for he opened a rather intricate clasp and slipped the bit of paper into it.

"All good—not get wet," he said, picking up the larger package. "The arrow fly down; come back how soon?"

"Send this," pointing to the package, "the first thing in the morning; then wait until night for the stage from Pacific that brings the mail—maybe if road is bad it will not come till next morning."

"Kalitan wait?"

"Yes, wait till the stage comes, then ask for letter, and keep your eyes open; watch for bad whites. Klahowya!"

Watching Kalitan start off with that package, he drew a long breath of relief, like a man who had laid down some burden; and leaving the avenue and the camp behind, he struck out over the trail toward Hardy's, not even stopping to saddle a horse. He was going to have a "wau-wau" with Mowitza.

He had barely entered the stable door when Tillie came across the yard, with a shawl thrown over her head and looking disturbed.

"Oh, is it you, Mr. Genesee?" she said, with a little sigh of disappointment; "I thought it was Hen or one of the others come back. Did you meet them?"

"Yes; going up the west valley after stock."

"The west valley! Then they won't get back before dark, and I—I don't know what to do!" and the worried look reached utter despair as she spoke.

"What's up? I can ride after them if you say so."

"I don't know what to say. I should have told Hen at noon; but I knew it would put him out of patience with Rachel, and I trusted to her getting back all right; but now, if the snow sets in quickly, and it threatens to, she may get lost, and I—"

"Where is she?"

"Gone to Scot's Mountain."

An energetic expletive broke from his lips, unchecked even by the presence of the little woman who had seemed a sort of madonna to him in the days a year old. The madonna did not look much shocked. She had an idea that the occasion was a warrant for condemnation, and she felt rather guilty herself.

"One of the Kootenai tribe came here this morning, and after jabbering Chinook with him, she told me Davy MacDougall was sick, and she was going to ride up there. Hen was out, and she wouldn't listen to Miss Fred and me—just told us to keep quiet and not tell him where she was, and that she would get back for supper; so we haven't said a word; and now the snow is coming, she may get lost."

Tillie was almost in tears; it was easy to see she was terribly frightened, and very remorseful for keeping Rachel's command to say nothing to Hardy.

"Did that Indian go with her?"

"No; and she started him back first, up over that hill, to be sure he would not go over to the camp. I can't see what her idea was for that."

Genesee could—it was to prevent him from knowing she was going up into the hills despite his caution.

"There is not a man left on the place, except Jim," continued Tillie, "or I would send them after her. But Jim does not know the short-cut trail that I've heard Rachel speak of, and he might miss her in the hills; and—oh, dear! oh, dear!"

Genesee reached to the wooden peg where his saddle hung, and threw it across Mowitza's back.

In a moment Tillie understood what it meant, and felt that, capable as he might be, he was not the person she should send as guardian for a young girl. To be sure, he had once before filled that position, and brought her in safety; but that was before his real character was known.

Tillie thought of what the rest would say, of what Stuart would think, for she had already bracketed Rachel and Stuart in her match-making calendar. She was between several fires of anxiety and indecision, as she noted the quick buckling of straps and the appropriation of two blankets from the hanging shelf above them.

"Are you—can you get someone to go for me—from the camp?" she asked hurriedly. He turned and looked at her with a smile in his eyes.

"I reckon so," he answered briefly; and then, seeing her face flushed and embarrassed, the smile died out as he felt what her thoughts were. "Who do you want?" he added leading Mowitza out and standing beside her, ready to mount.

She did not even look up. She felt exactly as she had when she told Hen that she knew she was right, and yet felt ashamed of herself.

"I thought if you could spare Kalitan—" she hesitated. "She knows him, and he has been with her so often up there, no one else would know so well where to look for her—that is, if you could spare him," she added helplessly.

"The chances are that I can," he said in a business-like way; "and if I was you I'd just keep quiet about the trip, or else tell them she has an Indian guide—and she will have. Can you give me a bottle of brandy and some biscuits?"

She ran into the house, and came back with them at once. He was mounted and awaiting her.

"Kalitan has left the camp—gone over that hill;" and he motioned rather vaguely toward the ridge across the valley. "I'll just ride over and start him from there, so he won't need to go back to camp for rations. Don't you worry; just keep quiet, and she'll come back all right with Kalitan."

He turned without further words, and rode away through the soft flakes of snow that were already beginning to fall. He did not even say a goodby; and Tillie, hedged in by her convictions and her anxiety, let him go without even a word of thanks."

"I simply did not dare to say 'thank you' to him," she thought, as he disappeared. And then she went into the house and eased Fred's heart and her own conscience with the statement that Kalitan, the best guide Rachel could have, had gone to meet her. She made no mention of the objectionable character who had sent Kalitan.

By the time of sunset, Scot's Mountain was smothered in the white cloud that had closed over it so suddenly, and the snow was still falling straight down, and so steadily that one could not retrace steps and find tracks ten minutes after they were made. Through the banked-up masses a white-coated unrecognizable individual plowed his way to MacDougall's door, and without ceremony opened it and floundered in, carrying with him what looked enough snow to smother a man; but his eyes were clear of it,

and a glance told him the cabin had but one occupant.

"When did she leave?" was the salutation MacDougall received, after a separation of six weeks.

"Why, Jack, my lad!"

"Yes, that's who it is, and little time to talk. Has she been here?"

"The lass—Rachel? She has that—a sight for sore eyes—and set all things neat and tidy for me in no time;" and he waved his hand toward the clean-swept hearth, and the table with clean dishes, and a basket with a loaf of new bread showing through. "But she did na stay long wi' me. The clouds were comin' up heavy, she said, and she must get home before the snow fell; an' it snows now?"

"Well, rather. Can't you see out?"

"I doubt na I've had a nap since she left;" and the old man raised himself stiffly from the bunk. "I got none the night, for the sore pain o' my back, but the lass helped me. She's a rare helpful one."

"Which trail did she take?" asked Genesee impatiently.

He saw the old man was not able to help him look for her, and did not want to alarm him; but to stand listening to comments when every minute was deepening the snow, and the darkness—well, it was a test to the man waiting.

"I canna say for sure, but she spoke o' the trail through the Maples being the quickest way home; likely she took it."

Genesee turned to the door with a gesture of despair. He had come that way and seen no sign of her; but the trail wound above gulches where a misstep was fatal, and where a horse and rider could be buried in the depths that day and leave no trace.

At the door he stopped and glanced at Davy MacDougall, and then about the cabin.

"Are you fixed all right here in case of being snowed in?" he asked.

"I am that—for four weeks, if need be; but does it look like that out?"

"Pretty much. Goodby, Davy;" and he walked back and held out his hand to the old man, who looked at him wonderingly. Though their friendship was earnest, they were never demonstrative, and Genesee usually left with a careless klahowya!

"Why, lad—"

"I'm going to look for her, Davy. If I find her, you'll hear of it; if I don't, tell the cursed fools at the ranch that I—that I sent a guide who would give his life for her. Goodby, old fellow—goodby."

Down over the mountain he went, leading Mowitza, and breaking the path ahead of her—slow, slow work. At that rate of travel, it would be morning before he could reach the ranch; and he must find her first.

He found he could have made more speed with snowshoes and without Mowitza—the snow was banking up so terribly. The valley was almost reached when a queer sound came to him through the thick veil of white that had turned gray with coming night.

Mowitza heard it, too, for she threw up her head and answered it with a long whinny, even before her master had decided what the noise was; but it came again, and then he had no doubt it was the call of a horse, and it was somewhere on the hill above him.

He fastened Mowitza to a tree, and started up over the way he had come, stopping now and then to call, but hearing no answer—not even from the horse, that suggested some phantom-like steed that had passed in the white storm.

Suddenly, close to him, he heard a sound much more human—a whistle; and in a moment he plunged in that direction, and almost stumbled over a form huddled against a fallen tree. He could not see her face. He did not need to. She was in his arms, and she was alive. That was enough. But she lay strangely still for a live woman, and he felt his pocket for that whisky flask; a little of the fiery liquor strangled her, but aroused her entirely.

"Jack?"

"Yes."

"I knew if I called long enough you would come; but I can only whisper now. You came just in time."

"How long have you been there?"

"Oh, hours, I think. I started for the gulch trail, and couldn't make it with snow on the ground. Then I tried for the other trail, but got lost in the snow—couldn't even find the cabin. Help me up, will you? I guess I'm all right now."

She was not, quite, for she staggered woefully; and he caught her quickly to him and held her with one arm, while he fumbled for some matches with the other.

"You're a healthy-looking specimen," was the rather depreciating verdict he gave at sight of the white, tired face. She smiled from the pillow of his shoulder, but did not open her eyes; then the match flickered and went out, and he could see her no more.

"Why didn't you stay at home, as I told you to?"

"Didn't want to."

"Don't you know I'm likely to catch my death of cold tramping here after you?"

"No," with an intonation that sounded rather heartless; "you never catch cold."

The fact that she had not lost her old spirit, if she had her voice, was a great point in her favor, and he had a full appreciation of it. She was tired out, and hoarse, but still had pluck enough to attempt the trip to the ranch.

"We've got to make it," she decided, when the subject was broached; "we can make it tonight as well as tomorrow, if you know the trail. Did you say you had some biscuits? Well, I'm hungry."

"You generally are," he remarked, with a dryness in no way related to the delight with which he got the biscuits for her and insisted on her swallowing some more of the whisky. "Are you cold?"

"No—not a bit; and that seems funny, too. If it hadn't been such a soft, warm snow, I should have been frozen."

He left her and went to find the mare, which he did without much trouble; and in leading her back over the little plateau he was struck with a sense of being on familiar ground. It was such a tiny little shelf jutting out from the mountain.

Swathed in snow as it was, and with the darkness above it, he felt so confident that he walked straight out to where the edge should be if he was right. Yes, there was the sudden shelving that left the little plot inaccessible from one side.

"Do you know where we are, my girl?" he asked as he rejoined her.

"Somewhere on Scot's Mountain," she hazarded; the possessive term used by him had a way of depriving her of decided opinions.

"You're just about the same place where you watched the sun come up once—maybe you remember?"

"Yes."

He had helped her up. They stood there silent what seemed a long time; then he spoke:

"I've come here often since that time. It's been a sort of a church—one that no one likely ever set foot in but you and me." He paused as if in hesitation; then continued: "I've wished often I could see you here again in the same place, just because I got so fond of it; and I don't know what you think of it, but this little bit of the mountain has something witched in it for me. I felt in the dark when my feet touched it, and I have a fancy, after it's all over, to be brought up here and laid where we stood that morning."

"Jack," and her other hand was reached impulsively to his, "what's the matter—what makes you speak like that now?"

"I don't know. The idea came strong to me back there, and I felt as if you—you—were the only one I could tell it to, for you know nearly all now—all the bad in me, too; yet you've never been the girl to draw away or keep back your hand if you felt I needed it. Ah, my girl, you are one in a thousand!"

He was speaking in the calmest, most dispassionate way, as if it was quite a usual thing to indulge in dissertations of this sort, with the snow slowly covering them. Perhaps he was right in thinking the place witched.

(To be continued.)

One of the worst storms in the history of Yucatan, Mexico, cut down the production of sisal so that receipts of the product at Progreso during November were 45.7 per cent below normal.

Hercules at a nice profit. Why don't you get

The Wonderful Hercules

The Hercules is the only genuine All Steel Stump Puller made. It is 60% lighter and 400% stronger than any iron puller made or any "semi-steel" puller. The Hercules has ample strength to pull out any stump or green tree or hedge. Its triple-power principle gives it a powerful pull—yet easier on the team than any other puller ever made. Either self-anchored or stump-anchored. Built low to the ground. It can be furnished with 200 feet of cable—enough to pull 3 acres of stumps without moving the machine.

It is sold on 30 days' free trial, backed by a 3 year guarantee that insures the free replacement of any castings that may break from *any* cause, flaw or no flaw, at any time within 3 years from date of purchase.

My New Low Prices

This year I have set aside a limited number of Hercules Stump Pullers for the first buyers, at a price that will clean them out quick. Send me your name now on the coupon—or just use a postal—*but send it today*. My new book will surprise and please you. See the real pictures, from 25 different states, of big stumps the Hercules has pulled out like you would pull weeds. Read the many interesting letters from farmers, lumbermen and land promoters.

I'll send the book and special price offer by return mail. I'll tell you the best crops to raise on virgin land where stumps were before. I want you to get my free book and special price proposition at once. Mail me the coupon or postal right now, before you forget, or take down the name and address and write me soon. Address me personally.

The Things That You Want the Most

This Book Tells You How To Get Them

IS it not a fact that the things you want the most seem the hardest to get? Have you wished and waited, oh, so long, for some little luxury that you wanted very much, yet hesitated to buy? A tasteful set of Rogers Silver Ware for your table? Or a pretty brooch; a nice book, a pair of gloves; a shopping bag, or any one of a hundred other nice things that you did not wish to spend money for?

You Can Get What You Want Without Cost

Do not hesitate another moment. Send right away for the book that will tell you how to get the things that you want the most without a cent of expense to you. THE PEOPLE'S HOME JOURNAL premium plan will enable any person to obtain innumerable beautiful and useful articles without cost. By this plan can be obtained wearing apparel, household articles, jewelry and the many other things of practical and ornamental utility that you so frequently require for yourself or family.

Thousands Of Beautiful and Useful Presents Given Away

The character of the articles that we are distributing is attractively varied, and in the assortment there is something that will appeal to everyone. Among other things are.

Bound Books	Pillow Shams
Bracelets	Scarfs
Waist Sets	Shawls
Towels	Centerpieces
Scissors	Toilet Sets
Fancywork Outfits	Bed Spreads
Birthstone Rings	Pocket Books
Silver Thimble	Salt Shakers
Aprons	Lace Curtains
Locket and Chain	Gloves
Dinner Sets	Leather Bags
Gold Clocks	Food Chopper
Dressing Sets	Game Boards
Pillow Slips	Dolls
Tea Spoons	Handkerchiefs
Birth Spoons	Petticoats
Rugs	Teddy Bears
Glassware	Novels

and many other nice things for the home and family.

Sent Free Upon Request

This comprehensive 44 page book, illustrating and describing hundreds of attractive and valuable articles, all of which can be obtained without one cent of expense, will be sent free to any reader of this paper upon request. Our premium plan offers an unusual opportunity to those of our friends who are interested in obtaining, without cost, beautiful and useful things for the home and for personal adornment. The book will tell you exactly what to do to obtain the premiums. Send a post card to-day asking for a free copy of this fine illustrated catalogue, showing all the beautiful things we are giving away.

THE HOME

Letters intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., Wisconsin Farmer, Madison, Wisconsin.

Noon Meal For Child.

There is no reason why the ordinary family dinner should not be suitable for school children or served in a way that adapts it to their needs, according to Farmers' Bulletin 712, School Lunches. The usual first course of meat and vegetables contains nothing, except the meat, which cannot be given even to the youngest children. The vegetables, provided they are carefully prepared by simple methods, are specially needed and can often be made attractive to children by being served with a little meat gravy. As a substitute for the meat itself, milk can be provided in the case of the younger children. These articles, with the bread and butter, provide most of the food needed.

The dessert course is suitable for children as well as for grown people, unless it consists of rich pastries or puddings. The latter are not considered wholesome for children, if for no other reason than that they are likely to lead to overeating. Such desserts as fruit, fresh or cooked, with cake; cereals with milk, or cream, and sugar; custards and custard puddings; gelatine dishes; simple ice cream; water ices; and other simple desserts may be given.

Whether or not the family meal is healthful for children depends not only on the food materials selected, but

CAROLEEN LUEVERNIA ERICKSON
Eight-months-old daughter of Mr. and Mrs. L. B. Erickson.

also on the way in which they are cooked. Simple methods are to be preferred from the standpoint of health as well as from that of the housekeeper's time. All dishes that are likely to contain overheated and scorched fats, such as foods carelessly fried in a pan in a small amount of fat, should be avoided. Deep-fat frying is open to fewer objections, since, if properly done, foods will absorb little fat and the fat will not scorch. Vegetables cooked in water or in their own juices and seasoned with salt and a little butter or cream are easier to prepare than those that are served with white sauce, scalloped, or cooked in other elaborate ways.

What is said above applies equally to all meals. There is, however, one special precaution that applies to the noon meal when it is hurried. This refers to tough, hard foods that are likely to escape proper mastication. It is a mistake to think that the foods given to children must always be soft or finely divided, for children's teeth need exercise quite as much as their muscles do. When time for eating is limited, however, it is well to omit foods that are difficult to chew, and in extreme cases it may be necessary to serve only soft or finely divided foods—sandwiches made from crustless bread with finely chopped fillings, for example. Before resorting to this, however, it is well to make sure that the time for eating and for insistence on good table manners is not unnecessarily cut short. The advantage of putting the meal on the table promptly and of having foods served in individual portions, or at least ready to eat when they are brought to the table, should be kept in mind. To have the meat already sliced and the dessert in cups instead of in one large dish from which individual portions must be served, and to follow the same general plan with other foods, may change a hurried meal into one at which there is plenty of time for attention to details essential to health and good manners.

If special lunches, different from those prepared for the family in general, are to be given to school children, the following are suggested as bills of fare. They are only typical and many others might be given which might be just as good.

Suggested bills of fare for the home lunch:

1. Eggs, boiled, coddled, poached or scrambled; bread and butter; spinach or other green; cake.
2. Beef stew with vegetables; milk; crisp, thin tea biscuits; honey.
3. Dried bean or pea puree; toast; baked apple; cookies.
4. Vegetable-milk soup; zwieback; rice with maple sugar and butter or with milk or cream.
5. Potato chowder; crackers; jelly sandwiches.
6. Cold meat; creamed potatoes; peas; bread and butter; frozen custard or plain ice cream and plain cake.
7. Lamb chop; baked potatoes; bread and butter; sliced mixed fruits; cookies.
8. Baked omelet with spinach, kale or other greens; bread and butter; apple sauce; cake.
9. Milk toast; string beans; stewed fruit; cake.
10. Boiled potatoes; codfish gravy; bread and butter; lettuce; custard.

Care of House Plants.

To the Editor:—The aphis or plant louse which infests house plants can be gotten rid of by sponging the plant with a weak soapsuds and rinsing with tepid, clear water, by keeping the soil drier and by keeping the plant in a cooler atmosphere. Too much moisture and too high a temperature will cause the aphis to breed very rapidly.

The plants should be changed into clean pots that have been scalded and thoroughly cleaned, and new dirt that has been made steaming hot by setting it in the oven, and then cooled. Then set the plants in a place where the temperature is cooler, water sparingly, and I think you will not be troubled any more.

A covering of air-slaked lime one-fourth inch deep over the dirt in the pots is said to help keep down the aphis. I used to have lots of trouble with the different kinds of aphis. Some I got on plants bought at the greenhouses and some were home bred, I suppose, but now I have no trouble with them, even on house roses, which is one of the plants they dearly love. A temperature of 60 degrees is a good one for plants.

Mrs. C. M. Clark.

Geraniums.

To the Editor:—I want to give my experience with geraniums for the benefit of the ladies who asked about these flowers. In the spring I plant my geraniums out of doors in rich soil. I wash the painted pots (tin cans are best) in hot soapsuds in order to kill all germs, and put them away in a dry place until needed. In the fall I take slips with bud on each, fill the pots with virgin soil (earth from the woods) or mix the soil with a little bone meal or poultry manure, and then plant the young slips, cover each with a glass and set away in a cool, dark place for two or three days.

When the slips have formed roots I set them in the sunshine. Don't forget to water freely. Three things are necessary, namely, sunshine, moisture and rich soil.

In case you have no fertilizer such as I have named, give an occasional watering with bloody water. This will be easy at butchering time.

When geraniums are troubled with lice lay the plant sideways with a dish of soapsuds underneath and wash the whole plant. If there are worms in the ground take some slaked lime, put in water and let stand twenty-four hours, then drain and water the plants.

My geraniums bloom when five inches high. N. N.

How to Cook a Ham.

To the Editor:—Some time ago I was at a picnic where they had a most delicious ham. It had a hard shell about an inch thick, which was as hard as baked clay. I could tell from the flavor that it was seasoned with pepper, mustard, cloves and garlic, but I haven't the slightest idea how to go about to prepare it and I have been wondering if any of the Home department readers could tell me. I am sure that we have many good cooks among our number and it is quite likely that some of them know how such a ham is prepared. —Eloise.

The rational meal contains at least one food from each of the following groups:

Carbohydrate: Bread, crackers, macaroni, rice, cereal, breakfast food and other cereal foods.

Protein: Lean meats, poultry, fish, oysters, milk, cheese, eggs, legumes and other protein rich foods.

Fat: Butter, cream, lard, culinary fat, salt pork, chocolate and other fatty foods.

Ash: Spinach, peas, lettuce, potatoes, apples, oranges, berries and other vegetables and fruits raw or cooked.

Flavor: Sirup, honey, jelly, dried fruits, candies and other sweets.

Salt Beads.

To the Editor:—I have read many helpful things on the Home page and I would like to have some of the readers tell me how to make salt beads with cornstarch, salt and water. I used to know how to make them and they were very pretty, but I have forgotten how much of each to take.

R. R.

Recipes.

Cranberry Shortcake.—Two cupfuls sifted flour, four teaspoonfuls baking powder, pinch of salt, one-fourth cupful sugar, one-fourth cupful shortening, one egg, one-third cupful milk, stewed cranberries. Mix and sift baking powder, salt and sugar with flour. Rub or chop the shortening in. Add the well-beaten egg to the milk and add gradually to the other mixture. Use only enough milk to make a soft dough—the amount may vary. Divide the dough into two parts and shape one portion to fit a greased pie tin. Brush over the top with melted butter and place the remaining dough on top. Bake twenty minutes in a hot oven. Split; place the stewed cranberries, which have been well sweetened, between the layers and on top. Cover all with a layer of whipped cream and ornament with a border of whipped cream run through a pastry tube.

Doughnuts.—Three eggs, one cupful sugar, one pint whole milk, two teaspoonfuls baking powder, nutmeg to taste, and enough flour to stiffen so a spoon will stand upright. Roll out and cut into desired shapes and fry in hot fat.—Mrs. R. T. Judd.

Oat Meal Cookies.—Pour one cupful of very hot lard over two cupfuls of oatmeal and set aside until cold; then add one well beaten egg, one cupful of sugar, one-half cupful of sour milk, one-half teaspoonful each of baking soda and salt, one cupful of chopped and seeded raisins, one teaspoonful of powdered ginger, one-half teaspoonful of powdered mace and enough flour to make a stiff dough. Do not knead the paste, but drop it from a spoon onto well-greased tins. Bake in a hot oven for ten minutes.

Glazed Onions.—Melt one-half cup butter in a saucepan, then put in as many peeled onions as will fit in without crowding. Move about until all are quite well coated with butter, sprinkle with tablespoonful of sugar, then pour over them a well flavored soup stock or dissolve a little beef extract in hot water and salt well. Simmer until the onions are tender, take off the lid of the saucepan, and let the stock simmer down to about half a cupful.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Why We Celebrate Christmas.

Dear Young Folks:—I like to read our page very much and can hardly wait for the paper to come.

At school our teacher put ten subjects on the board and let us choose from them. I took this one, "Why We Celebrate Christmas." This is what I wrote:

"When Mary and Joseph went to Bethlehem Mary rode and Joseph walked and led the ass. They were going there to an inn. When they got there the inn was full of people, so there was not room for them. Then they thought of the cave back of the inn and went there. That was the place where the shepherds slept on stormy nights with their sheep, and there were mangers all around inside the cave.

"Mary and Joseph slept in the cave that night and there a baby boy was born to Mary, and He was the Savior whom all had expected for a long time.

"All of the shepherds were awakened by an angel who came and told them that a Savior was born in Bethlehem. The shepherds went to Bethlehem, but everything was quiet, so they went to the cave and found the little baby lying in the manger. This is why we celebrate Christmas."

I am ten years old and am in the sixth grade. I go to a consolidated school. —Alice.

Androclus and the Lion.

Dear Young Folks:—I enjoy reading your letters and I am going to tell you the story of "Androclus and the Lion."

Once upon a time there lived a slave whose name was Androclus. One day he ran away from his master and ran into the woods. There he found a cave and when he went in he fell asleep. After a while a lion came in and Androclus awoke. He was afraid, but the lion did not want to hurt him. There was a thorn in the lion's paw. When Androclus pulled it out he and the lion became friends.

But one day some soldiers were passing through the woods and found Androclus. In those days when any slave ran away from his master he had to fight a hungry lion, and they said Androclus should do this. But when the lion came in he saw that it was his old friend and he would not touch him, and the people said that Androclus should be free. —Charlie.

Our Fashion Department.

All Patterns, 10 Cents Each.

THIS department is prepared especially for The Wisconsin Farmer. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want, and inclose 10c for each number. We agree to fill all orders promptly and guarantee safe delivery.

Catalog of Fall and Winter Fashions

Send 10c in silver or stamps for our up-to-date 1916 large fall and winter catalog, containing over 400 designs of ladies', misses', and children's patterns, as well as the latest embroidery designs, also a concise and comprehensive article on dressmaking, giving valuable hints to the home dressmaker. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wis.

1930—A practical ladies' apron. Pattern is cut in 3 sizes: Small, medium and large. It requires 4⅞ yards of 36-inch material for a medium size.

1920—Ladies' one-piece yoke dress, with or without folds. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5½ yards of 44-in. material for 36-in. size.

1798—A comfortable and convenient garment. Pattern is cut in 3 sizes: Small, medium and large. It requires 8½ yards of 36-inch material for a medium size.

1661—Girls' overblouse dress with guimpe, having two styles of sleeve. Pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3½ yards of 36-inch material for the dress and 2 yards of 27-inch material for the guimpe for an 8-year size.

1936—A simple school dress with sleeve in either of two styles. Pattern is cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 3¼ yards of 36-inch material for a 6-year size.

1913—A serviceable set of bags. These three attractive models are cut in 1 size. It requires for No. 1, ¾ yard of 36-inch material, for No. 2, ⅝ yard, and No. 3, ½ yard.

1804—A seasonable and becoming model. Pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 3½ yards of 36-inch material for a 6-year size.

1817—A new and attractive shirt waist. Pattern is cut in 8 sizes: 34, 36, 38, 40, 42, 44, 46 and 48 inches bust measure.

It requires 2½ yards of 36-inch material for a 36-inch size.

1448—Costume for misses and small women, with sleeve in either of two lengths, and with five-gore skirt. Pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 6⅜ yards of 36-inch material for a 16-year size.

1555—Ladies' dress, with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5¾ yards of 44-inch material for a 36-inch size.

1427—Ladies' two-piece circular skirt (in raised or normal waistline). Pattern is cut in 5 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 2¾ yards of 48-inch material for a 24-inch size.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for December 31, 1916.

Christ's Coming and coming to Christ (Review).

READING LESSON—Rev. 22:6-14; 16: 21.

GOLDEN TEXT—The spirit and the bride say, come. And he that heareth, let him say, come. And he that is athirst let him come. He that wills, let him take of the water of life freely. —Rev. 22:17.

It is possible in lessons one to nine to review the past quarter's work, in a logical, chronological manner, but lessons seven and nine are not in their proper chronological setting. These lessons extend over five years of Paul's life from about 58 A. D. to 63 A. D. They are five wonderful years, and the last of the authentic years we have of the life of this wonderful man. The review should, of course, center in Paul, his conduct, character and teachings.

The first twelve chapters of the Book of Acts, in which we have chiefly been studying, cover a period of about sixteen years, A. D. 30-46, with Jerusalem as the center. The rest of the Book of Acts cover another period of approximately sixteen years from 46 to 62, and is the record of the foreign missionary work of Paul and his companions, Paul being, of course, the central character. The series for this quarter close with the vision of the final triumph of Christianity as seen by John in the Revelation. Maps should be employed if possible to show the journeys of Paul. The risen Christ and the enduement of the Holy Spirit were the vision and the power which wrote this first Church History, and which have been writing Church History ever since. The home church (Chs. 2-7) began with about 120 praying men and women. Peter's first sermon brought into "the way" 3,000 more. From time to time others were added. Persecution and deliverances, the first martyr, Stephen, and the dissatisfaction which led to the choice of the deacons, are the outstanding events of this period. The home mission period, with Jerusalem as the center and Palestine as the field (Chapters 8-12) covers a period of about ten years. Persecution scattered the disciples throughout the country. Paul was converted on the road to Damascus, Philip goes to Samaria, and Peter carries on the work throughout Lydda, Joppa and Caesarea. In this section we have the story of Philip and the Ethiopian, of Peter curing the palsied man at Lydda, the raising of Dorcas and Paul and Barnabas returning to Jerusalem with help to those at that city who were suffering from famine. Then begins the period of foreign missions, covering about sixteen years, from about A. D. 47 to 62. The principal characters begin, of course, with Paul and Barnabus, though Paul soon takes his place of leadership. Paul's first missionary journey lasted for about two years, from say A. D. 47 to 49, Barnabus being his principal companion. Returning to Antioch from Jerusalem, Paul soon began his second journey, this time taking with him Silas. Again there is a period of about two years, from A. D. 50 to 52. Paul had his Macedonian vision during this time, and the gospel first entered Europe, beginning with the conversion of the Philippian jailor. Paul's preaching at Athens and his service at Corinth are perhaps the most outstanding features of this journey. Paul's third journey lasted nearly three years, A. D. 53 to 56 or 57. He revisited the Asia Minor churches to strengthen them, spends nearly three years at Ephesus, and has some outstanding adventures as, for instance, the riot at Ephesus about the shrines of Diana. Returning to Jerusalem to take part in the feast, he is told of the ultimate persecutions which he must endure. For a long time he has desired to preach the gospel in Rome. Every one of the trials, hindrances, oppositions and attacks proved to be the means by which he gained that desired end.

In this particular quarter, in lesson one, we see Paul's calmness in persecution, his prudenc under danger. In lesson two, his delicate courtesy and shrewdness in seizing every opportunity that he might witness for his Lord. In lesson three is manifested his unshaken belief in everything found in the Scriptures, and his wise use thereof in leading men to Christ. In lesson five, his fearlessness amidst danger and his absolute confidence in God. In lesson six, his humility. In lesson seven, his well balanced common sense and his love of peace among his brethren. In lesson eight, we see him longing for human companionship and sympathy, and have an evidence of his love of his own countrymen, and yet his faithfulness declaring the ord of God to them as well as to the Gentiles.

Last Sunday we stood with Isaiah, looking down through the centuries to the man of Galilee 700 years hence. Today, as we review this quarter and the lessons of the past year, we are looking back nearly two thousand years to the one who wrought out our salvation on Calvary, but we may also turn our faces the other way, and look for him whose returning will bring peace to the earth, and at whose coming the brightness of his glory shall cover the earth even as the waters cover the sea.

We have seen the breaking down of "armed peace."

Indoor Closet

More Comfortable, Healthful, Convenient

Eliminates the out-door privy, open vault and cesspool, which are breeding places for germs. Have a warm, sanitary, odorless toilet right in your house. No going out in cold weather. A boon to invalids. Endorsed by State Boards of Health.

ABSOLUTELY ODORLESS

Put It Anywhere In The House

The germs are killed by a chemical process in water in the container, which you empty once a month. **Absolutely no odor.** No more trouble to empty than ashes. Closet absolutely guaranteed. Write for full description and price.

Special Renewal Offers

NOTICE, WISCONSIN FARMER READERS A CHANCE TO SAVE MONEY!

SUBSCRIPTION rates are going up. Dozens of publications have already announced new subscription prices, and hundreds of others are preparing to do likewise. The cost of paper, ink, labor, etc., has increased over 50 per cent in the last year and the present unsettled market conditions indicate another sharp advance.

Most publishers are rapidly withdrawing all low rate offers. We were fortunate in making contracts for the fall and early winter subscription season months ago, but these contracts are expiring now and we cannot believe that many will be renewed. We, therefore, urge you to take advantage of one of the special offers indicated below. This may be the last time that they will appear. We cannot guarantee them to be good more than fifteen days from the date of issue of this paper, so send in your order today.

GO EAST YOUNG MAN and buy NEW ENGLAND FARMS. Produce milk at 3c., sell 10c. qt. and feed ten million people. S. F. Sherman, 52 Bway., New York.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Roup, a Contagious Disease.

To the Editor:—Lucky is the poultry keeper who does not have to doctor one or more of his fowls during the present season, the climatic conditions being so changeable as to thwart in his endeavors to maintain health in his stock. It is possible for a fowl to contract a cold of a catarrhal nature and to spread the disease before its owner is aware that such disease exists, and especially is this liable to happen in the case of a large flock of birds, the latter escaping individual observation.

It only stands to reason that any single fowl suffering with disease of an epidemic nature is a danger to the whole flock so long as it is privileged to drink at the same water vessel as its companions.

The poultry keeper will, therefore, be wise to keep an observant eye on his birds, and to stamp out even the slightest signs of disease of a catarrhal nature. When a fowl is heard to sneeze that should be regarded as a danger signal, and no time should be lost in removing the bird from its companions. When new birds are bought, or when birds return from the show they should be placed in quarantine for a few days before placing them with the flock. A bird may seem apparently well, and yet there may be lurking in its system the germs of roup, whose activity has not reached the stage of detection. They look as innocent as lambs whilst in their system lurks the contagious germ of destruction.

It will be well to suggest to the reader that it requires something more than doses of medicine to successfully doctor this disease.

Isolation, a proper dietry, and systematic attention play as important a part in the successful treatment of disease as do the finest medicines procurable. It is impossible to cure a fowl of disease of a roupy nature by simply visiting the roosting quarters at night and administering medicine. Apart from the fact that disease is liable to spread when isolation is not carried out, the bird with a roupy ailment cannot properly assimilate grain food, and requires a light, nourishing dietry to assist it in fighting against the disease. Then, again, a bird suffering with roup requires external as well as internal treatment to effect a cure, and such treatment cannot be given to a bird running with the entire flock. In some light and airy building should be placed coops for the reception of any birds that may fall sick and to which they can be confined until a cure is effected.

As to dieting, moist mash foods should be used, such as bread and milk, rice boiled in milk, or other mashes of a light and nourishing nature. The water supply should be pure and should be frequently changed.

A few crystals of permanganate of potash should be dissolved in each supply of water to render it antiseptic.

What is commonly known as "one eye cold" is a form of roup the seriousness of which it should be difficult to exaggerate. So serious are the effects of the disease upon a neglected bird, however, that it should be regarded as one of the worst diseases classed with those of roupy nature. The disease more often than not crops up in a way that disarms suspicion, and the poultry keeper will do well to be on the lookout for it, and to lose no time in an endeavor to stamp it out whenever it is detected. A flock of birds may represent the picture of health on one day and on the following day the attendant may notice that one or more of them have a little froth in the corner of one eye.

The matter may give rise to no alarm, when, a few hours later, it is noticed that the frothiness has increased considerably, and that the affected eye seems to cause the owner of that organ much inconvenience.

It is then that no time must be lost in isolating the bird and giving relief, otherwise the loss of an eye will be experienced by the sufferer. This form of roup claims a great many victims when allowed to get a firm hold in the poultry house. It is that little quantity of froth in the eye which is liable to pass unnoticed in a large flock of birds, and the origin of which is apt to spread before alarm is given. Poultry keepers will do well to pay periodical visits to the roosting quarters at night, and, by the aid of artificial light, examine the eyes of their birds, when any bird showing signs of the disease can be isolated and doctored.

Epsom salts should be mixed with their soft food, and the antiseptic referred to above should be placed in their water supply. Aside from this application the following may be applied with a medicine dropper or syringe, these solutions having been successfully used in the treatment of roup: First, one dram of permanganate of potash to a quart of water, second, one ounce of boric acid to a quart of water, third, one ounce of peroxide of hydrogen to three ounces of water.

The roosting quarters should be disinfected thoroughly, to prevent further cases of this contagious disease. Use every means of prevention, examine the birds carefully and you will never have a case so advanced which is commonly called the one-eye cold.

F. F. Hunstock.

Ailing Animals.

Unthrifty Mare.

I have a seven-year-old mare that has been poor for two years. She eats well. When I work her she seems to get a little better but when she stands in the barn she gets poorer. She runs out to good hay and has all the feed she wants and plenty of salt. She has plenty of life all the time. I feed her bran and corn. There is a tank of water in the lot all the time.

It might be well to have your mare examined by a veterinarian.

Stiffness.

I have a calf four months old that I am feeding corn, water and straw. The last week it is very stiff in the hind legs. Cannot help itself up. Its appetite is very good. Can you tell me what is the cause of the calf acting in such a manner? No treatment has been given.

It would be hard to say what the trouble is in this case without a thorough examination. This should be made by a competent veterinarian because of there being so many causes of stiffness.

Worms.

Please give some good remedy for worms in horses and colts, and for mares in foal if a different medicine is needed for them. I notice that some of my horses are passing worms and I do not know what to do for them.

To horses and to mares not in foal give the following: Give to each animal one dram of copper sulphate, one and one-half drams of powdered charcoal and one and one-half drams of fenugreek. Give this amount night and morning for eight or ten days and follow with a brisk purge of one-half ounce of aloes and a pint of linseed oil. The first mentioned may be given to mares without using the aloes and oil. Oil of turpentine, one-half ounce, given in small amount of linseed oil is very effective if given for three to five days.

Stock Farms FREE

The Southeastern Land Show, to be held in Atlanta, February 1-15, 1917, is planning the distribution of about 100 stock farms to those making application for same while in attendance at the Land Show. The farms will contain from ten to 100 acres in each tract and will represent a money value of from $1,000 to $10,000. Full particulars will be furnished anyone desiring same upon application to the

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Remember the Johnson Bros.' Sale.

THIS is our last chance to impress upon our readers the importance of buying a few real good hogs. You realize that one or two choice sows, of any breed, will do you more good than a half dozen of the kind that most of the farmers raise. The man that raised the good seed stock, no matter what breed, can always find an outlet, for that class of stock is always in demand. The Johnson Bros. know that the good ones are the cheapest. These brothers have been raising Duroc Jerseys for the past nine years, but no one ever heard of them until two years ago when they went out and bought Royal King, at $2,650. The fact that they paid that amount did more to put them on the map than anything else. This is the record price of recent years and every one interested in the "red hog" was talking about the Johnson Bros. Next they went out and bought the best sows they could find to cross with Royal King. Last winter they held a sale—their first one—and made the highest average of any breeder in the state—$87.50. Now it wasn't the personality of the Johnson Bros., it was the fact that they had the goods to offer and the buying public wanted it. We know men that have been breeding Durocs for twenty years and couldn't make a $40 average if they sold thirty of their tops. If you belong to that class, get out of the rut, buy a good sow or two and take care of them, ship your others to the market and in the end you will be money ahead besides the satisfaction of owning a good herd of hogs that you need not make excuses for. The Johnson Bros. will hold their second Duroc Jersey sow sale at Winnebago, Minn., on Tuesday, January 9th, and this will be a good place to buy those sows for that foundation herd. Mr. Duroc Breeder, a sow or two from this herd will tone up your own herd somewhat. The half page advertisement which appears in this issue tells you something of the breeding and individuality; they are as good as the breeding. If you attend the sale you'll buy a sow. Get one of the catalogs, it is full of Duroc Jersey history. Attend F. M. Washburn's sale at Lake Crystal the day before then go to Winnebago, for the 9th. You will enjoy the two sales. If you care to send bids same should be sent to T. P. Shreve in care of the Johnson Bros., Winnebago, Minn. See page 21.—Adv.

Dodge and Jefferson County Holsteins.

THERE are probably no two counties that have contributed more to the reputation of Wisconsin as the home of good dairy cattle than Dodge and Jefferson counties. For years the Holstein herds in these two counties have compelled the attention of the United States by the heavy production records that they have made. The same blood lines that have produced these world's record cows are scattered throughout the herds in the two countries and may be purchased by our readers. There is a great deal of official testing done by breeders in these two counties, and scores of high record cows are developed every year. this section of the state has also been particularly free from tuberculosis and other diseases, there being no universal outcropping of the disease as there has been in some states, or in some sections of this state. There is no better section of the state to visit when in the market for good producing cows of good type and conformation. For full information in regard to what is available write to Francis Darcey, secretary of the Intercounty Holstein Breeders' Association, Watertown, Wis. See page 23.—Adv.

Arthur Rust's Holstein Herd.

THE Holstein herd of Arthur Rust, West Allis, Wis., dates back for more than thirty years. His father and uncles imported twelve head from Holland way back in the early eighties. By careful observation and attention they learned that certain types and certain characteristics are essential in a cow of heavy production ability. They early began exhibiting cattle at the Wisconsin State Fair, and have been among the heaviest prize winners for many years. These prizes for type and conformation, combined with the high records which the cows have produced, are evidence that they have developed the proper kind of cattle. Readers of The Wisconsin Farmer who are in need of a herd sire will do well to write to Mr. Rust and find out what he has for sale. A good bull from this herd will add both good type and high production ability to your next crop of calves. For further information write to the above address. See page 23.—Adv.

Riverdale Short-horns.

HENRY WEHMHOFF, Burlington, Wis., proprietor of Riverdale Farms, under date of December 20th, writes as follows: "I wish to report the sale I made recently of a fine lot of Short-horns to S. Metz & Sons, the noted horse breeders and importers of Homewood Ill. The cattle are to be shipped to their 2,000-acre ranch at Pendleton, Ore. Since my advertisement started in August I have sold twenty-five or thirty head, all to breeders who have seen my advertisement in The Wisconsin Farmer. I have advertised for several years off and on in your paper and am pleased to be able to state that I have always received excellent results." At the present time Mr. Wehmhoff is offering a few choice young cows with first calf and a few mature cows for sale. He also has three fine yearling bulls for sale red and roan in color, sired by Orange Clipper. He will also sell a few October heifer and bull calves sired by Clipper Sultan, a grandson of Whitehall Sultan. Our readers who are in want of Short-horns should write him. See page 22.—Adv.

Washburn's Chief Invincible Sale.

MONDAY, January 8th is "Chief Invincible day" in the Duroc Jersey fraternity, for that is the date that F. M. Washburn sells fifty head of this breed in his new sale pavilion at his beautiful farm near Lake Crystal, Minn. With all due respects to the other good Duroc Jersey boars we consider Chief Invincible one of the greatest of the breed, and all progressive breeders should have one or more of his daughters in their herds. As a sire, this boar is just making his reputation. Few breeders can put up a better sale offering than will be sold by Washburn on the above date. No breeder will have better tops than can be found in this sale. One of the attractions will be a spring gilt by Orion Cherry King—individually she is good. A yearling by Pathfinder is the largest thing of the age in the sale—she will certainly make the 800-pound kind and is safe in pig to Chief Invincible. A Cherry Chief sow out of a Proud Col. dam will be in demand. There are four outstanding fall sows sired by the champion, Illustrator and out of a King the Col. dam. If you want an Educator son of the $10,000, The Milk and Butter King. Send for extended pedigrees of the bulls advertised for sale. When writing kindly mention that you saw their advertisement in The Wisconsin Farmer.—Adv.

Constance is Pleased.

WE ARE always glad to hear from our breeder friends in regard to their herds. A letter typical of the many we receive is herewith published. This is from F. R. Constance, Wapaca, Wis., who has been an advertiser for the past few weeks in The Wisconsin Farmer. He writes as follows: "Just shipped a fall boar today to Mr. Frank Wreestruck, Milladore, Wis. This pig was sired by Victoria's Corrector and out of Challanger's Wonder Lady. Victoria's Corrector's sire was Corrector 146659 by Sensation Wonder 125593 and his dam a daughter of Lee's Defender, so you see the blood is right. The pig is right also and will make a fine boar if given a chance. Recently we shipped a yearling fall boar by Lee's Defender to Ed Patterson, Jr., Bloomington, Wis. The dam of this boar is a daughter of Crimson Lad by Marion's Wonder. Mr. Patterson, who is an advertiser in The Wisconsin Farmer, writes that he was well pleased with this boar. He certainly is a fine fellow and will do a lot of good. We sold a litter mate to this boar to Emblojaard Dairy Farms, Marquette, Mich., some time ago, and have retained another litter mate as one of our herd boars. Inquiry is good for both Durocs and Jerseys. We have a nice bunch of sows bred for spring farrow and the gilts you saw when here are developing into a fine bunch. We expect to have a couple of good

NEXT WEEK'S SALE PROGRAM

Tuesday, January 2d	Duroc Jerseys, F. S. Vanderhyde, West Concord, Minn.
Wednesday, January 3d	Short-horns, Minnesota Short-horn Breeders' Association, South St. Paul, Minn.
	Duroc Jerseys, W. U. Gousseff, Mgr., Owatonna, Minn.
Thursday, January 4th	Duroc Jerseys, E. J. Wilson, Renville, Minn.
Friday, January 5th	Duroc Jerseys, John Swenson, Willmar, Minn.

there is a good one in this sale. Critic D. breeding is the big noise in Nebraska, a fall sow by that boar sells in this sale. Golden Model 21st is the sire of one of the good ones. There will be three gilts by the well-known Col. Wonder, etc. The catalog is full of that kind of breeding and as far as the individuality is concerned they are good as you'll find. When you see the gilts that go in this sale sired by Chief Invincible, you'll then agree that he is above the ordinary. Most of the offering has been bred to Chief Invincible for early farrow and the gilts sired by him have been bred to Golden Superba, a son of that well-known boar, I Am Golden Model Again, and his dam, Fancy Superba is by the noted Superba. The boar is quite a likely individual and should cross nicely on Chief Invincible gilts. Don't pass this sale by—you need better sows and Washburn has them to sell and not only that, they are bred to one of the best five boars in the United States. The best come higher, but it pays in the long run. Write at once for the catalog—look it over carefully and if you find it impossible to get away, mark the ones you prefer and send your instructions to T. P. Shreve and your bids will be handled in an honorable manner. Don't forget the date and place—Lake Crystal (near Mankato) Minnesota, Monday, January 8th. Johnson Bros. sell the day following. Arrange to attend both sales. See page 20.—Adv.

Wincklers' Holsteins.

RICH production blood is back of the yearling bulls advertised for sale on page 23 by B. F. Winckler & Sons, Medina, Wis. They are sired by Sir Johanna Colantha De Kol, whose dam made 27.56 pounds of butter in seven days. In this sire is combined the blood of the noted Johanna and De Colantha families. The bulls advertised for sale are out of daughters of Oakhurst Milk and Butter King, that is a ones at Madison next February for the sale. We also have a fine lot of fall pigs on hand for sale. We have six or eight fine high-grade yearling Jersey heifers for sale also." See page 21. —Adv.

Knudson's Richly Bred Durocs.

AT THE present time Allic S. Knudson, breeder of Guernseys and Duroc Jerseys at Brodhead, Wis., is offering twenty very choice spring and fall gilts. If you want Durocs that carry the blood of "nobility" Knudson has them. These gilts are sired by Valley G., he a litter brother to the great champion, Illustrator, and Col.'s Defender, a Colonel-Defender bred boar. They are safe in pig to a yearling son of Taxpayer Chief, that is a litter brother to Taxpayer 13th, the grand champion boar at the World's Fair, 1915. The dam of Taxpayer Orion is by Joe Orion 2d, a boar that was a grand champion at the Chicago International, and she is a litter sister to John's Orion that was first in class at Chicago. This is the most desirable breeding known and you will make no mistake if you buy a few gilts from Mr. Knudson. Write him and mention The Wisconsin Farmer. His spring boars are all sold which shows that he raises a class of Durocs that are in demand. See page 21.—Adv.

Last Call For Swenson.

DON'T forget the John Swenson Duroc Jersey sale at Willmar, Minn., Friday, January 5th. That is the day and place that he will sell those fifty tried sows and gilts that you have heard so much about. Remember that the entire offering is either sired by or bred to a grand champion boar, something that no other breeder can feature in the Northwest. This sale is worthy of your presence and you will be the loser if you do not attend. Willmar is on the Great Northern west of St. Paul and the railroad facilities are the very best. If it is absolutely impossible for you to attend, write or wire bids to T. P. Shreve, in care of John Swenson, Willmar, Minn., but attend in person if you can. See page 21. —Adv.

That Pure Bates Cattle Herd.

WE recently spent the day with B. W. Little, Janesville, Wis., who owns that herd of pure Bates Short-horn cattle. This is the purest herd of strictly Bates cattle in the Northwest and the fact that this herd has been established for some forty years goes to show that it is as pure as possible to make, for no outside blood has been used in the herd. In 17th Duke of Waysie, Mr. Little has what we consider one of the best Bates bulls we have ever seen—besides being a bull of scale his offspring are desirable individuals and the heifers sired by him are making good at the pail beyond expectations. At the present time Mr. Little has some bulls of serviceable age that are now ready for shipment. Their dams are big, rugged cows that have given from 8,000 to 10,000 pounds of milk in a year and being sired by the above bull, gives one reason to think that they will make good at the head of a herd. They are being priced for immediate sale and if you are interested in milking Short-horns, write Mr. Little for a more detailed description of the bulls. Kindly mention the fact that you saw the advertisement in this paper. See page 22. —Adv.

Parker's Prolific Porkers.

E. H. PARKER & SON, Janesville, Wis., are now offering bred sows that will appeal to anyone wanting good Duroc Jerseys. In the first place, they are bred along the most popular lines known to the breed being out of sows by such noted boars as Illustrator, Marion's Wonder, Lee's Defender, Orion Chief, Defiance and others. They are bred to a son of Orion Cherry King Jr., the boar that was the grand champion at the Omaha Swine show. This boar has been named King Orion and he is one of the best yearling boars in the state. Others are bred to a son of the Chief's Col. he by the noted Chief's Col. The Parkers have some fifty head to sell and as we have recently seen them we are glad to say that they will give satisfaction. These can be purchased now at a lower figure than if you wait until the later part of February, besides you will get the pick of the lot. Investigate this offer. This firm is absolutely on the square and you will get a good deal if you buy of the Parkers. Write them for further description and please mention The Wisconsin Farmer. See page 21.—Adv.

For Those That Want a Scotch Bull.

THE real outstanding, straight Scotch Short-horn bulls, that can be bought are very scarce, but one is being advertised on page 19 of this issue that is "one in a hundred." He is a white in color, will be two years old in January, has been tuberculin tested and is right in every way. Few bulls carry a better pedigree. He is sired by the noted Royal Silver, that carried the blood of such noted bulls as Choice Goods, Whitehall Sultan, Premier, The Lad For Me and back to that famous cow, Princess Alice. The dam of the white bull is Missie Sultana 2d—a Marr Missie. We have recently seen this bull and will say that he is one of the best prospects that we know of. He has not been pampered in any way, but will satisfy the critical buyer. Those needing a choice pure Scotch herd bull should investigate this one. He is owned by F. S. Bunker, Kilbourn, Wis. Kilbourn is on the main line of the Milwaukee between the Twin Cities and Chicago.—Adv.

Last Call For Wilson's Duroc Sale.

THIS is the last opportunity we will have to call your attention to the closing-out sale of E. J. Wilson which will be held at Renville, Minn., Thursday, January 4th. This is one of the sales that the breeders should attend, for it contains an offering that is desirable. Seventy head of sows will be sold, mostly yearlings and tried sows and the best bred lot that has been sold for some time. Arrange now to attend this sale, but if you can't, send buying instructions to T. P. Shreve, field man for The Wisconsin Farmer. Don't forget the date and place.—Adv.

Last Call For Washburn's Sale.

DON'T forget that next Monday is the day that F. M. Washburn sells one of the best offerings of bred Durocs that ever went through a sale ring in the Northwest. As you know, the sale will be held on the farm near Lake Crystal, Minn., which is ten miles from Mankato. If you want to get in on the good things get busy at once and arrange to attend this sale. If you can't come send bids. See page 20.—Adv.

Guernsey Herd Bull.

FRANK E. SWAN, Wauwatosa, Wis., is offering for sale his Guernsey herd bull, Billy of Paradise Spring City, which is advertised on page 19. This bull is five years old, a sure breeder and easily managed. In addition Mr. Swan will sell several young bulls and A. R. cows that are out of the herd bull. These animals are priced right and anyone interested in them should

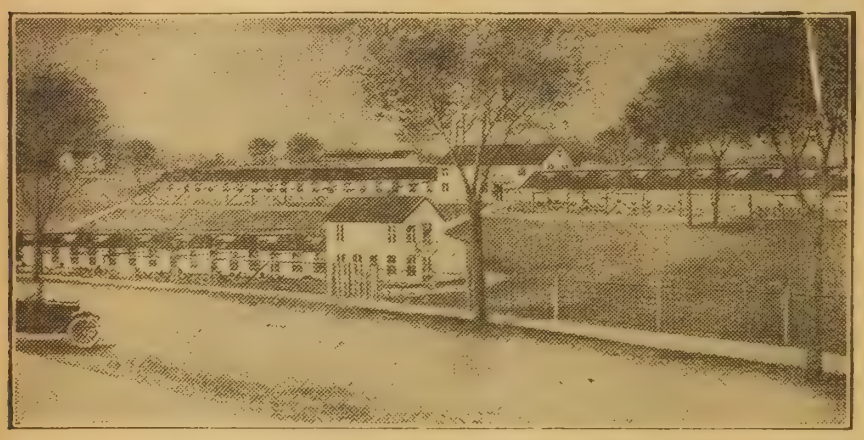
Studebaker 1917 Almanac.

THE Studebaker almanac and weather forecast for 1917 contains a great many short, practical articles and information which will be interesting and valuable to readers of this paper. The articles are classified for handy reference. Besides the usual almanac calculations the new edition contains valuable information concerning agriculture, dairying and stock raising and helpful hints for the farm women. Then there are some valuable suggestions concerning the care and upkeep of automobiles which will be helpful to thousands of farmers. The articles are compiled by expert mechanics and will save many a big repair bill and unnecessary expense, if closely followed. It explains the correct method of caring for the car in summer and winter, what to do when anything goes wrong, how to overhaul the motor when necessary. Electric motors and stationary engines also receive attention, for the benefit of the farm owners who have these conveniences installed on their places. Readers of this paper who wish a copy of this valuable book should write to the headquarters of the Studebaker Company, mentioning that you saw the advertisement in this paper.—Adv.



BIRD'S-EYE VIEW OF THE FRANK FOY POULTRY FARM, CLINTON, IOWA.

ANY of our readers in need of good breeding stock, should send for Foy's big book, "Poultry and Squabs For Profit," advertised elsewhere in this paper. A copy will be mailed free to those who are interested, by addressing the Frank Foy Poultry Farm, Clinton, Iowa.

Buy a Good Herd Sire.

STUART REID, Oconomowoc, Wis., sends us the following letter under date of December 15th. "Mr. Forrest Gunderson and myself have purchased Sir Pietertje Ormsby Mercedes 43d from E. C. Schroeder, Moorhead, Minn. A word concerning Sir Pietertje Ormsby Mercedes 43d. As his name indicates he is a son of Sir Pietertje Ormsby Mercedes. His dam, Aaggie Wayne Peep, has a record of 34.59 pounds butter and 657.2 pounds milk in seven days at six years. She also crossed the thirty-one-pound mark at four years of age. She has a semiofficial record of 1,250.35 pounds butter and 27,762.5 pounds milk. This makes her one of the highest semiofficial cows of the breed. Aaggie Wayne Peep is the world's champion long distance cow for her age. She has three year records that average 1,030 pounds butter at the average age of four years. Tilly Alcartra is the only other cow to equal this, but her records were made at full age. This makes Sir Pietertje Ormsby Mercedes 43d the highest semiofficial record bull in Wisconsin."—Adv.

High Prices For Hides.

PRICES offered for hides and furs have increased to a surprising extent. Louis Andersch, of the Andersch Bros. hide and fur dealers, Minneapolis, urges farmers to skin every dead farm animal. Cow hides are worth more than five times as much as they were a few years ago, and horse and sheep hides are valuable. A number of farm boys supplied themselves with a liberal fund of Christmas money through the sale of muskrat and skunk skins. Mr. Andersch will be glad to quote prices on skins and furs to any Wisconsin Farmer reader who will write him, mentioning this paper. See page 10.—Adv.

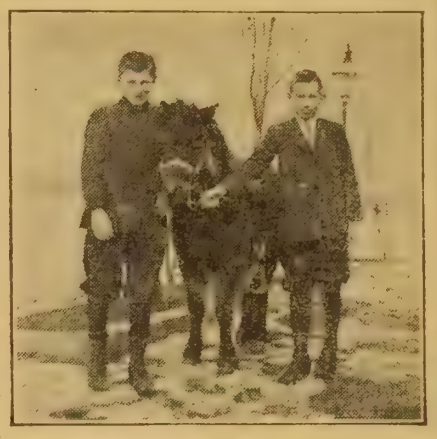
Derenthal Fall Pigs.

IF interested in Chester Whites, investigate the fall pigs—either sex—being offered by H. A. Derenthal, Wykoff, Minn. This breeder has what we consider one of the best herds in the Northwest and we have just had a letter from him saying that he has the best lot of fall pigs he ever raised. This is a strong statement, knowing that he has had some great litters in previous years. They are sired by two of his best boars, namely: Ignatz, the junior champion at North Dakota, Minnesota and La Crosse, 1915, and Callaway's Kind, first at Minnesota and grand champion at La Crosse, 1916. The pigs will please you, send him an order. Bred sows will be offered later. Please mention The Wisconsin Farmer. See page 22.—Adv .

CHILDREN ARE WINNING PONIES.

Victor Harris, of Ashland County, Wis., is One of 445 Children Who Have Won Shetland Ponies.

EVERY child should have a chance to win a free pony like that won by Victor Harris, of Ashland county, Wis. The picture shows Victor with his pony "Jay" given to him by the Pony King. Read how The Pony King is giving away more ponies, in the advertisement on the back page of this paper. Victor writes that he received his pony on December 22d, and he has already taught "Jay" how to shake hands with him. "Jay" is one of the most beautiful of all the 445 ponies that have been given away by The Pony King to boys and girls. A number of those ponies have been given away to boys and girls in Wisconsin, and The Pony King writes us that he would like to give away several more ponies to families that read this paper. We would advise any child who wants a free pony to turn to the back page of this paper and read the announcement of The Pony King. With a very little effort, many other children have received free ponies, and there is a good chance for you to receive one also. At least send for the free Pony Picture Circular and read all about it. All you need to do is to send your name to The Pony King, 307 Webb Bldg., St. Paul, Minn. Parents will do well to have their child send in his or her name. Just turn to the back page and write the name on the coupon.—Adv.



Victor Harris and his fine little Shetland pony. See the free pony advertisement on the back page of this paper.

THE pure Bates Short-horn bull at the head of the B. W. Little herd at Janesville, Wis., 17th Duke of Waysie. Several young bulls are being offered sired by this bull. Here is one of the best Bates herds in the country. See advertisement on page 22.

Fisher Making Good Sales.

WE have just been advised that T. J. Cartern, Monroe, Wis., has joined the Duroc Jersey fraternity. He purchased a lot of very fine sows from Allic Knudson, Brodhead, Wis., and just recently purchased a very fine King the Col. boar from John L. Fisher, Janesville, Wis. This boar is out of A.'s Model a litter mate to the champion, Lee's Defender, and, as we have recently seen this boar, we feel that he will do Mr. Carter a great deal of good. In a recent letter from Mr. Fisher he reports the following recent sales. Boars to C. H. Olson, Blanchardville, Reitan Bros., Bonduel; John Graham, Dunbarton; John Lankenan, Peotone, Ill.; Harry Arnold, Milton, Wis. He still has about fifteen boars for sale, one of them being a litter mate to the boar sold to Mr. Carter. Jumbo, a spring boar by Long Wonder is also for sale, he is one of the largest spring boars that we have seen this year. Write your wants. See page 21.—Adv.

La Belle View Farm Holsteins.

THE two Holstein bulls offered for sale by E. E. Rosenkranz, Oconomowos, Wis, on page 23 will attract the attention of our readers. In them is combined blood that cannot help but produce heavy milking cows. They are both sired by a grandson of Sir Ormsby Hengerveld De Kol, the sire of the great cow, Pietertje Maid Ormsby. Their sire is also a cousin of the world's yearly record cow, Duchess Skylark Ormsby. One of the bulls for sale is out of a 21.50-pound daughter of Pontiac Hengerveld Parthenea, that has sixty-five A. R. O. daughters with records ranging from twenty-four to over thirty-six pounds of butter in seven days. Send for the extended pedigrees of these two choice bulls, and when writing kindly mention that you saw this write-up in The Wisconsin Farmer. —Adv.

Baird Bros. Make Good Records.

UNDER date of December 12th Baird Bros., Waukesha, Wis., write as follows: "We are more than pleased with the results that we are getting by testing some of the daughters of Sir Urmagel Burke, that is a thirty-one-pound bull with a thirty-five-pound sister. It looks to us more than ever that blood will tell. Three of his four-year-old daughters are on test at present. Two of them have just made twenty-three pounds of butter in seven days. The third one has made 24.78 pounds and is still improving. Her dam made 24.53 pounds at four years and 29.68 at six years. We believe she is better than her dam and are looking forward to the time when she will make a considerable better record, as she is only in ordinary working clothes at the present." See page 22.—Adv.

Holsteins of Both Sexes.

EARL NORWOOD has a good herd of Holstein cattle at Gays Mills, Wis., and has at this time some beautifully marked registered and high-grade cattle of both sexes that he is offering for sale. These cattle will please you and he will make prices that are attractive. If interested write.—Adv.

Bulls From A. R. O. Dams.

IF YOU are going to need a Holstein bull in the near future, visit the herd owned by R. C. Walker, Kilbourn, Wis. He has several young bulls sired by King Fobes Oak De Kol, and out of A. R. O. dams that are being priced far below their real value. He needs the barn room and the buyer will get the benefit, so get busy. Say you saw the advertisement in The Wisconsin Farmer and write him for breeding and records. See page 23.—Adv.

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

FRANK P. SHEKLETON & SONS **LAWLER, CHICKASAW CO., IOWA**

We are 50 miles west of Prairie du Chien, Wis., on the Milwaukee R. R., making direct connections for Lawler.

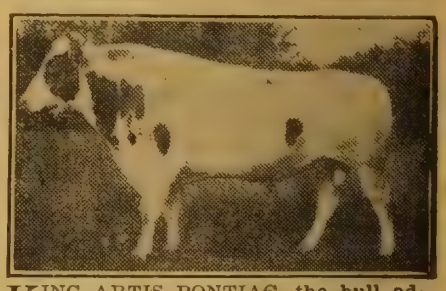
Bulls That Will Please.

JOHN H. BEAR & SON, Spring Green, Wis., have a small, but select herd of Short-horn cattle, Scotch and Scotch topped. These gentlemen are good caretakers and if you visit their farm, adjoining town, you will find their cattle in good condition, showing that they have not been neglected. At this time they have a few bulls of serviceable age that are far above the ordinary and if a prospective buyer could see them, it would not take him long to make his purchase. You are perfectly safe in sending this firm your check and leave it to their good judgment to send you a bull—they will send you a bull worth the money. Write them your wants, we gladly recommend their herd.—Adv.



KING ARTIS PONTIAC, the bull advertised for sale on page 22 by Ed Schultz, Hartford, Wis.

Buy Bred Sows.

ART G. HOSKINS, is that good Chester White breeder living near Dodgeville, Wis., and for a short time he will offer Chester White gilts bred and safe in pig to Paddy 2d, he by Paddy by the noted Schoolmaster. On

SIR PIETERTJE ORMSBY MERCEDES 43d, recently purchased by J. J. Reid & Son and Mrs. M. Gunderson & Sons, Oconomowoc, Wis.

TOO LATE TO CLASSIFY.

PURE SCOTCH SHORT-HORN BULL

SULTAN GOODS. White, January, 1915, tuberculin tested, right, bred by Anoka Farms. Sire, Royal Silver (sold for $4,000). Combines the blood of Choice Goods, Sultan, Premier, The Lad For Me and Princess Alice. Dam, Missie Sultana 2d, a Marr Missie. Few such bulls for sale—your opportunity. Address F. S. BUNKER, KILBOURN, WISCONSIN

the dam's side they come from the very best breeding, and, as we saw these gilts some time ago we will say that they will give satisfaction. Mr. Hoskins also has a large flock of White Wyandotte chickens and is offering a few choice cockerels for sale. Write this breeder and let him fill your order. —Adv.

Fewacres Farm Jerseys.

JERSEY breeders will watch with interest the Jersey herd of Fewacres Farm owned by Fred D. Underwood, Wauwatosa, Wis. No money or pains has been spared in selecting good breeding stock both good as to breeding and in type. Official testing has been done for more than a year and the many fine records made is evidence of the good judgment shown in selecting the foundation stock. One of the cows in the herd, Irene's Cherry 285828, a senior two year old, recently completed a record of 12,571.6 pounds of milk and made 753.62 pounds of butter fat, equivalent to 942 pounds of 80 per cent butter. This is a wonderful two-year-old record. A young bull purchased from this herd will continue to grow into money, as his dam and other near relatives increase their records. Write for pedigrees and description of the young bulls they have for sale, when in need of a herd sire. See page 22.—Adv.

Kitty Clay Short-horn Herd.

THE Clay family of milking Short-horns has long been known as one of the heaviest producing families of the breed. For years members of this family have won milking contests at the International and at leading state fairs. The records made in private and semiofficial test by a large number of the members of this family range from 9,000 to well over 11,000 pounds of milk per year. The Kitty Clay herd owned by J. Warren Hoyt, Rosendale, Wis., is no exception to this rule, and the cows are showing fine production records. The herd is headed by Kitty Clay's Duke, a young bull of exceptional breeding. He will intensify the already high production blood in this herd. A few of his sons are advertised for sale on page 22. Send for pedigrees and prices.—Adv.

Wenham's Milking Short-horns.

JEFFERSON COUNTY is the home of many fine herds of dairy animals, and among these is the herd of milking Short-horns owned by Geo. Wenham & Sons, Ft. Atkinson, Wis. It is one of the few pure Bates herds now to be found. The herd was established nearly forty years ago with animals of Bates breeding and nothing but sires of Bates breeding have been used since. As might be expected, the cows are good milkers and high testers, One family having a test of 6 per cent fat for several generations. The entire herd is of Clay Buttercup and Wild Eyes lines of breeding, two of the heaviest producing families of the breed. Our readers will make no mistake in buying a herd sire or females from this herd. See page 22. —Adv.

Heid's Guernseys.

A FEW registered Guernsey females can be spared by W. J. Heid, Ft. Atkinson, Wis., so he wrote us a few weeks ago. We pass this information on to our readers for we know that if they knew this herd as we do they would waste no time before writing. The herd is an exceptionally good one, as great care has been used in the selection of breeding stock. Not only are the animals well bred, but have been given good care and are well grown. Mr. Heid also has a few young bulls, one or two of which are nearly ready for service, write for pedigrees and description and prices. When writing kindly mentfon The Wisconsin Farmer. See this page.—Adv.

Short-horns Are Worth Money.

WE can see no reason why beef cattle will not be high for several years to come and the Short-horn is the most popular farmer's cow. Williams Bros., Bangor, Wis., are crowded for winter quarters for their herd of Short-horns and for that reason they will sell a limited number of their young cows that are fresh or will freshen soon. These boys have a "clean" herd of cattle and if you buy from them you'll be pleased with the treatment accorded you. Their advertisement appears in this issue and, as good Short-horn females are scarce, we would suggest you write the above firm. See page 22.—Adv.

Grant County Angus.

GRANT COUNTY, WIS., is the leading county for registered Aberdeen Angus cattle in the northwest—Hauk Brothers, Cassville, are one of the leading breeders in that county—enough said, write them you wants.—Adv.

THERE will be assembled at the Western Live Stock Show at Denver, January 20th-27th, over 500 Short-horn bulls. This will be an opportunity for Western ranchmen. A public sale Friday, January 26th, held in connection with the show, will include sixty bulls selected from the tops of the 500 or more on the grounds. This sale offering will be picked with discriminating care, with the special purpose of providing high-class bulls of the type held in highest favor in Colorado and adjoining states. The sale will be held under the auspices of the American Short-horn Breeders' Association, Chicago,

RIVERDALE STOCK FARM

SHORT-HORNS

HAVE a few young cows with first calf; also a few mature cows, for sale. Three choice young bulls ready for service,reds and roan color, sired by Orange Clipper. Bull and heifer calves, born in October, sired by Clipper Sultan, a grandson of Whitehall Sultan. Prices reasonable. Address H. Wehmhoff Burlington, Wis.

and the buyers' interests will be fully safeguarded.—Adv.

Hereford Cattle.

Mar. 24, Minn. Hereford Breeders' Assn., South St. Paul, Minn.

Grant County Short-horn Breeders' Association.

A year ago the Short-horn breeders of Grant county, Wisconsin, formed a Grant County Short-horn Breeders' Association, but, other than forming the association, nothing has been accomplished during the past year. On December 21st the annual meeting of the association was held at Lancaster, and from the enthusiasm that was manifested at this meeting, it appears that Grant county will be heard from and gain the distinction as a Short-horn county. Twenty breeders were present, there being at the present time twenty-six members in the association. The next meeting will be held in June, at which time they expect to have a membership of fifty active Short-horn breeders. Robt. Griswold, Livingston, president; Wm. McCormick, Lancaster, vice president; Jay Martin, Bagley, secretary-treasurer for the ensuing year.

The "Baby Beef" show, held at the various county fairs, was gone into quite thoroughly and this association expects to push the "Baby Beef" shows that are to be held at Bloomington and Lancaster. They have promised to give $20 in prize money, $10 at each fair, to the first three winners, showing individuals sired by a pure-bred Short-horn sire.

This is an excellent start on the part of this association, and several of the members expressed a willingness to enter a steer or two for their boy or daughter.

The question of holding a public sale was discussed and met with favor. It was practically decided to hold a sale next fall, perhaps in October, though this will be settled definitely at the June meeting.

We are indeed glad to see Grant county start something with the Short-horn breed. There are more good herds of this breed in the southwest corner of Wisconsin than in any other county in the state, yet, unless there is organization on the part of the breeders, the county will not gain that recognization that it rightfully deserves.

Cattle raising in Cuba is a prospect that has attracted many Americans. At the close of the Spanish-American war Cuba was practically without cattle, but importations began in 1899. A number of Americans seeing the possibilities in the new industry emigrated to Cuba. In the last few years the extremely high price of pasture land in the United States and the prices offered for meat animals have renewed interest in the possibilities of cattle raising where land is still cheap.

Services of Expert Live Stock Photographer

Up-to-date live stock breeders are more and more using photographs in advertising their herds. It is the modern way of doing things, and The Wisconsin Farmer is meeting the situation by offering the services of a skilled live stock photographer. Appointments may be made by mail at any time. For estimates of cost and other information write The Wisconsin Farmer.

GUERNSEY CATTLE.

A Guernsey Show Bull Backed by Show and Production Records

DAM, Beatrix B, that at two years, five months of age, made 428 pounds of fat and gave 9,024 pounds of milk testing 4.74% fat. She is a daughter of Atwood Prince, whose offspring have been heavy prize winners and whose get of sire was never defeated. His seven A. R. daughters average 460 pounds fat at three years, five months. Sire, King Talladeen of Chestnut Hill, that has been first and champion at several leading fairs, has sired many prize winners. His dam made 635 pounds fat from 11,907 pounds of milk. Price $125. Two other yearling bulls of Glenwood breeding for sale from A. R. cows. Can also spare a few females. Send for our sale list or, better yet, come and visit Waukesha. If we haven't got what you want some of our fellow breeders will have.
FOX BROTHERS WAUKESHA, WISCONSIN

This youngster is backed by rich Advance Registry breeding. His dam, both grandams and both grandsires being Advance Registry animals. Send for pedigree and price. Address
STEPHEN BULL RACINE, WISCONSIN

AN AYRSHIRE OPPORTUNITY

WHEN we got home from the National Dairy Show with our show herd, we found our barns were full to overflowing. We have over 100 head, so as to reduce our herd we have decided to sell about twenty females—heifer calves or bred heifers. Here is an opportunity to get as good as there is in the U. S. or Canada. Prices very reasonable to make them sell quickly. Bulls ready for service and younger from A. R. O. cows. Send for pictures and prices. Address

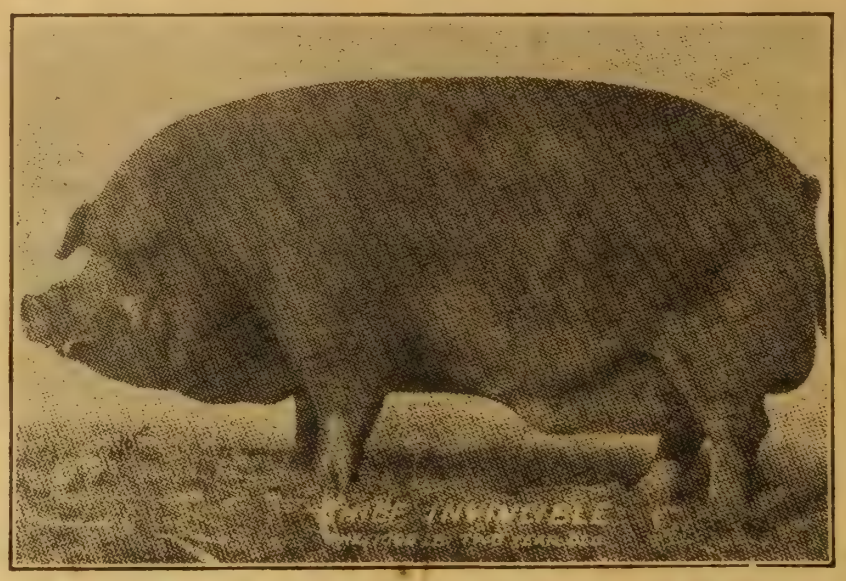
CHIEF INVINCIBLE DUROC JERSEY BRED SOW SALE

LAKE CRYSTAL, MINNESOTA, MONDAY, JANUARY 8, 1917

50 HEAD

Tried Sows
Spring Yearlings
Fall Yearlings
Spring Gilts



BRED TO

Chief Invincible

One of the largest, highest-backed, best-footed boars in America

MANY FEATURE SOWS

NOT a poor foot, a poor back or an undersized sow in the sale—every one is a good individual, and notice the following breeding: One of the largest yearlings to be sold this year, sired by **Pathfinder**; one fall sow by the champion, **Critic D.**; one spring gilt by the famous **Orion Cherry King**; four fall sows by **Illustrator**, out of a **King the Col.** dam; one choice tried sow by **Cherry Chief**, dam by **Proud Col.**; one yearling by **Educator**; four by **Chief's Col. 40th**; three by **Winning Wonder**; one by **Golden Model 21st**; five by **I Am Golden Model Again**; three by **Col. Wonder**, besides the spring gilts by the 1,000-pound **Chief Invincible.** The "aristocracy" of the Duroc Jersey breed will go through my sale ring on January 8th. Come and help christen my new sale pavilion—you'll be comfortable this year. No better Durocs were ever sold in Minnesota. Those sired by **Chief Invincible** have been bred to **Golden Superba** by **I Am Golden Model Again**, dam by **Superba.** Write for one of my catalogs; it will interest you. Send all mail bids to T. P. Shreve, field man for The Wisconsin Farmer, in my care. Mention The Wisconsin Farmer when writing.

F. M. WASHBURN - - - - - - LAKE CRYSTAL, MINNESOTA

Johnson Bros. sell at Winnebago the day following. Arrange to attend the two greatest Minnesota sales.

HOLSTEIN-FRIESIAN CATTLE.

WHY YOU SHOULD BUY A BULL CALF FROM PABST STOCK FARM

Our stock is healthy, grown in open sheds under sanitary conditions. We are breeders, not dealers, and there is no opportunity for introducing disease into our herd.

You want the robust kind, full of vim and vitality. Our stock is that kind.

You want the best blood lines. Send for pedigrees of bull calves. They will prove our assertion that the breeding is second to none.

Our herd is large. Over 140 freshening this season. Gives you opportunity to select from a large number.

Last, but not least, we have the kind with splendid udders that make good at the pail.

Write Your Wants. We Can Please You.

PABST STOCK FARM

OCONOMOWOC DEPT. 30 WISCONSIN

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. - - - - WAUKESHA, WISCONSIN

A PROVEN HOLSTEIN BULL FOR SALE

IN order to avoid inbreeding we offer for sale our great herd sire, King Artis Pontiac, born Jan. 25, 1911. His daughters have made records up to 20 pounds butter in 7 days at 2 years of age.

His two nearest dams averaged over 29 lbs. butter in 7 days and his sire's dam has a record of 31.7 lbs. butter in 7 days and 21,834 lbs. of milk and 1,076 lbs. butter in one year. Write for pedigree and photo.

Wisconsin Star Stock Farms Ed M. Schultz, Hartford, Wis.

30-POUND YEARLING HOLSTEIN BULL

A 31.02 POUND BULL FOR SALE

RACINE JOHANNA PIEBE MERCEDES 188460. Born December 8, 1915. Well marked, of excellent conformation and well grown. His dam, **Ella Mercedes of Elm Court,** made **31.02 pounds butter** in seven days; **130.47** in thirty days and **829.78** in a year. She is a big cow weighing over 1,600 pounds; her dam weighs over 1,700. His sire, **Racine Sir Johanna Piebe,** is a show bull. His dam is a show cow and weighs close to 1,600 pounds. In seven days she made 24.49 and 808.82 pounds butter in a year. Send for his complete pedigree and picture. **Large size, good, straight type** and **heavy production ability** have been bred into this bull for generations. Come to our farm and see his dam, grandam and sisters. They are the type you will want in your calves. Am also offering a straight, well-grown heifer, born May 15, 1916, out of Lady Johanna of Elm Court, a half sister to Colantha Piebe of Elm Court; calf is sired by Count of the Pontiacs.
Reuben Klofanda R. 1, Racine, Wis.

Purebred Registered

HOLSTEIN CATTLE

The Virginia State College and Polytechnic Institute has developed, from its Holstein herd, seven of the highest record cows in the state, including Dione De Kol, holder of the state record for 7- and 30-days' milk and fat production. They also developed V. P. I. Viney Veeman, holder of the state record for senior two-year-olds. The leading state colleges and public institutions, by all tests, have found the Holsteins to be the best and most profitable of all dairy breeds.

Send for FREE Illustrated Descriptive Booklet.

Who Wants a Pony?

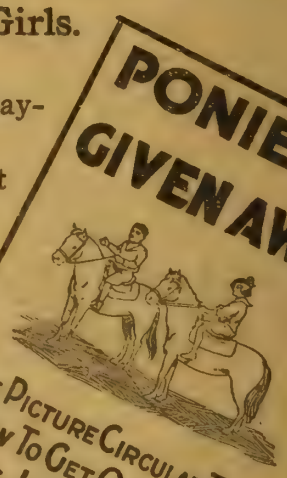
I am the Pony King of America. **I give Ponies away to Boys and Girls.**
I have given away 445 Shetland Ponies to 445 Boys and Girls—all over the United States.

Now I am going to Give Away Five more Ponies—beautiful, silky, long-haired playful Shetland Ponies—five of the finest Shetland Ponies I could find. I picked them out myself.

I am going to Give them Away to Boys and Girls and I want every family that takes this paper to stand an equal chance.

If you are a Boy or Girl send me your name right away. If you are the Father or Mother of a Boy or Girl, send in your Child's name. I will enter the name in my big Free-for-All Pony Club that starts right away.

No matter where you live, no matter how young, every child will stand the same good chance to get a Pony, with Buggy, Harness, Saddle, Bridle and Blanket. Be sure to send in your name right now.



"Crescent," a beautiful little pony, was given to Cecelia Garot of Kewaunee Co., Wisconsin. Cecelia sent in her name, just like 444 other children who have received free ponies from the Pony King. Cecelia writes: "My little Shetland pony "Crescent" got here Wednesday and I was so happy I could hardly wait to see him. So many people came to see him and they thought he was the sweetest little pony they ever saw. Some people said I would not get a pony, but I knew The Pony King would do all he said. I am sending you my picture showing myself and my friend and my sister shaking hands with "Crescent." He just loves soda pop and eats sugar right out of my hand."

Harold A. Pierce of Waushara Co., Wisc., sent in his name and The Pony King sent him a nice pony named "Sportsman." Harold writes that "Sportsman" can now do 21 tricks, including telling how old he is rolling over, standing on his hind feet and shaking hands. The Pony King also sent ponies to Victor Harris of Ashland Co., Sheldon Adams and Alfred Hokenstad of Dane Co., Pearl Kerr and Lawrence Fox of Grant Co., Keith Walker of Juneau Co., and Roy Podewells of Rock Co.

Pony Pictures Free

I want to send a **colored Pony Picture Circular free** to every Boy and Girl that sends in his or her name. It gives the names and shows the pictures of the five Ponies I am giving away, out on the farm where they live, with children riding them. It shows one of the ponies hitched to the beautiful Buggy I am going to give away, with six children taking a ride. It shows a picture of The Pony King out on the Pony Farm, talking to 15 children who live near the farm and who come over to ride the Ponies. It shows a picture of Harold Kutzler and "Rob Roy", the Pony I gave him. It shows a picture of Frank McKissak and "Wuzzy", the Pony I gave him. It also tells all about the five beautiful Shetland Ponies I am now going to give away and how to win one. Every boy and girl should get this Pony Picture Circular. I will send it free to every child who sends in his or her name.

Children Be sure to take this chance to get a Pony. Don't wait. Write your name and address in the corner below, cut it out and send it to me. I will then send you the Colored Pony Picture Circular free and you will have an equal chance to get one of the Real Live Ponies I am going to give away soon. You stand just the same chance as any other child and it doesn't cost you a cent. Get your pencil and write your name now.

Parents Please show this free offer to your child and send in the coupon. You will be interested in the Pony Circular I send and your child will enjoy it. He or she stands the same good chance as any other child to win one of the five Shetland ponies I am giving away, no matter where you live. Remember, I am giving Five Ponies at one time—not just one—so you see there are five chances to win one. Send in your child's name.

THE PONY KING, 307 Webb Bldg., St. Paul, Minn.

WRITE YOUR NAME HERE AND SEND IT TO ME

THE PONY KING, 307 WEBB BLDG., St. Paul, Minn.

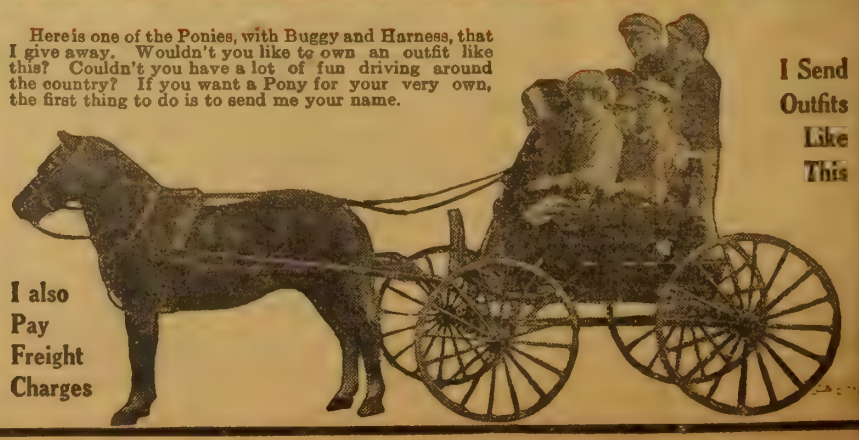
Please send me the **Free Pony Pictures** and enter my name in your **Pony Club** so I will have the same chance. I want one of the ponies you are giving away.

My name is_____

P. O._____ Age_____

State_____ R.F.D._____

Here is one of the Ponies, with Buggy and Harness, that I give away. Wouldn't you like to own an outfit like this? Couldn't you have a lot of fun driving around the country? If you want a Pony for your very own, the first thing to do is to send me your name.



I Send Outfits Like This

I also Pay Freight Charges
